## Revision History

Name	Description	Date
Version 1.0	New Specification issued	31 March 2015
Version 1.1	Addition of a new Index	12 June 2015
Version 1.2	Index name renamed	29 September 2015
Version 1.3	15-Min Delayed product details added	06 November 2015
Version 1.4	Addition of 10 New Indices and Indices renamed	08 March 2016
Version 1.5	Addition of 4 New Indices	31 January 2018
Version 1.6	Index renamed	22 March 2018
Version 1.7	Index renamed	03 July 2018
Version 1.8	Addition of 5 New Indices	04 January 2019
Version 1.9	Addition of 2 New Indices	06 August 2020
Version 1.10	Addition of 2 New Indices	30 September 2020
Version 1.11	Addition of 5 New Indices	03 August 2021
Version 1.12	Field Name changed from Warning Percent to Settlement Cycle in Security Information	21 December 2021
Version 1.13	Addition of 7 new indices	08 January 2022
Version 1.14	Added the note regarding Inclusion of Dummy symbols in MBP file	25 November 2022
Version 1.15	Increased token number range from short to long	23 August 2023
Version 1.16	Addition of 2 Dummy Indices	20 October 2023
Version 1.17	Addition of 2 New Indices	12 January 2024
Version 1.18	1. Addition in Note of T+0 definition in settlement cycle field for Security information 2. Removal in Note of T+2 definition in settlement cycle field for Security information	18 March 2024
Version 1.19	Addition of 4 New Indices	28 March 2024
Version 1.20	Increased total traded quantity range from long to unsigned long	24 April 2024

Version 1.21	<ol style="list-style-type: none"> <li>Increased range of total traded quantity and interval total traded quantity from unsigned long to long long and from long to long long respectively.</li> <li>Addition of Decoding Snapshot files and addition of Indicative Close Value in Indices Information</li> <li>Increased range of best buy quantity, best sell quantity and indicative traded quantity from long to long long.</li> <li>Addition of Indicative Close Price in Market Information</li> <li>Addition of FAQ Section</li> </ol>	28 August 2024
Version 1.22	Addition of 12 New Indices	08 November 2024
Version 1.23	Addition of 32 New Indices	29 November 2024
Version 1.24	Removal of ca1 in call auction market information	02 January 2025
Version 1.25	Addition of BOD - INAV Symbol mapping to NSE Symbol	27 February 2025
Version 1.26	Addition of 3 New Indices	06 March 2025
Version 1.27	Discontinuation of BHARATBOND-APR25 Index	08 April 2025
Version 1.28	<ol style="list-style-type: none"> <li>Added Permitted To Trade field in Security Information</li> <li>Addition of 1 question in FAQs section</li> </ol>	28 April 2025
Version 1.29	<ol style="list-style-type: none"> <li>Added the SSEC identifier field to Security Information</li> <li>Added 1 question in FAQs section</li> </ol>	05 June 2025
Version 1.30	New Index Addition	09 September 2025
Version 1.31	Addition of 9 new indices	10 November 2025
Version 1.32	Addition of 2 new indices	09 February 2026

# CAPITAL MARKET - SNAPSHOT DATA

## 1. Introduction

NSE Data & Analytics Ltd. offers real-time data and historical data products from NSEIL to a diverse range of clients. This includes 5 real-time products and 2 historical data products:

### Real Time data products

1. Real Time Data
2. Snapshot Data
3. Corporate Data
4. Analytical Products data
5. Indicative NAV Data

### Historical data products

1. End of Day Data
2. Historical Data

The data products are provided through delivery modes mentioned below:

- **Real-time Data:** The information is transmitted as a packet broadcast, facilitating ongoing distribution through data feeds via point-to-point leased line.
- **Snapshot, End-of-Day, and Historical Data:** The data is delivered as downloadable files over the internet using the SFTP protocol.

All these data categories are integrated within the Infofeed platform, ensuring comprehensive coverage and streamlined access.

This document explains about the NSE's Capital Market (CM) Real Time snapshot product. Through this product, binary snapshot files of CM data are generated on the server at regular intervals.

Clients who subscribe to this service connect to the NIBIS (NSE Internet-Based Information System) via the internet and must use the SFTP protocol to download the files. These files are provided in binary format.

To gain access to the NIBIS server, clients are required to submit their server's public key and static public IP address. Once verified, credentials are issued and remain valid for the duration specified in the service agreement.

## 2. Connection Details

Clients establish a connection to the NIBIS server over the Internet by utilizing the SFTP protocol through a designated public static IP address. Two NIBIS Production Servers operate in an active-active configuration. Each server can be accessed using two IP addresses, for ISP-level redundancy, as shown in the Structural Diagram. In case a server becomes inaccessible through both its IP addresses, the clients are required to fail-over to the other server.

### 2.1 Structural diagram

### 2.2 Data Types

Data Type	Size In Bytes
CHAR	1
SHORT	2
LONG	4
DOUBLE	8
LONG LONG	8

Byte order - Little Endian

All structures are pragma pack 1.

## 2.3 Platform notes

1. The SFTP service can be simultaneously accessed through both redundant IP addresses on each server. This is to enable clients to access the servers in case of link failure.
2. There may be slight differences between the data disseminated by the two servers because of factors impacting sampling such as CPU clock skew, differences in routing of data, etc.
3. Time stamp on the files on the server is in 24-hour format.
4. Certain files are compressed using ZLIB (gzip). The files may be decompressed using the popular “gunzip” command on Unix/Linux systems. Tools to decompress these files are also freely available for Windows on the World Wide Web, Gzip for Windows and 7-Zip being popular examples.
5. The Exchange does not provide software or support for decompression, SFTP, etc.

## 2.4 SFTP Connection Details

Segment	Server	URL	Port
CM	Primary	snapshotsftp1.nseindia.com	6010
	Secondary	snapshotsftp2.nseindia.com	6010

### 3. Overview

#### 3.1 Products and “Product Root”

The files are productized as per the generation frequency and are generated under their designated Product Roots on the server.

Product Root is the name of the top-level directory under which files for a product are generated.

Snapshot Frequency	Generation Frequency	Product Root
1 Minute Snapshot Product	Every 1 Minute	/CM01
2 Minute Snapshot Product	Every 2 Minutes	/CM02
5 Minute Snapshot Product	Every 5 Minutes	/CM05

The Product Roots may further contain subdirectories as specified in the relevant sections of this document.

Clients may subscribe to product of their choice depending on their data snapshot frequency requirement.

Delayed data products are also available, wherein the files generated on regular 1 minute interval basis is delayed by the specified time.

#### 3.2 Types of files generated.

The files are generated in binary format on the servers inside the corresponding type-wise sub-directories as specified in this document and can be broadly classified as follows:

Description	Frequency
Market Information Files	At a specific interval
Call-Auction Market Information Files	At a specific interval
Security Information Files	Once a day (EOD)
Bhavcopy Information Files	Once a day (EOD)

For each trading day, files are generated in date-wise sub-directories prefixed with the full month name (MonthDDYYYY) as specified in the relevant sections of this document.

The files generated at fixed frequency are continuously numbered, starting from 1.

### 3.3 Compression

Certain files are compressed using ZLIB (gzip). The files may be decompressed using the popular “gunzip” command on Unix/Linux systems. Tools to decompress these files are also freely available for Windows on the World Wide Web, Gzip for Windows and 7-Zip being popular examples. It may be noted that the Exchange does not provide software or support for decompression.

### 3.4 Data Types

Data Type	Size In Bytes
CHAR	1
SHORT	2
LONG	4
DOUBLE	8
LONG LONG	8

Byte order - Little Endian

All structures are pragma pack 1.

## 4. Data Details

### 4.1 Market Information

The Market information data files (MBP and Index) are generated on the server at regular intervals.

#### 4.1.1 Market Files

The \*.mkt ("\*" stands for a number) files contain market statistics and order information of the securities that are being traded during the last interval, including their open, high, low and close price. The file contains a single record for every security that is traded during that file interval. These files are generated during normal trading period To Close Session These files are generated in incremental count number on a trading day starting from 1 (for example, 1.mkt, 2.mkt and so on).

During the special trading session (mahurat trading), the first file will be generated after 15 minutes after the trading session starts.

Actual timing circular will be published by the exchange at the appropriate time.

#### 4.1.2 Indices Files

The \*.ind ("\*" stands for a number) files contain NSEIL Indices information, including open, high, low and close index. Each file contains data of all indices of Exchange. These files are generated at regular intervals. These files are generated during normal trading period and during Close Session.

## 4.2 Call Auction Market Information

### 4.2.1 Call Auction Market

Multiple sessions of call auction market can be held in a trading day.

The call auction session shall consist of

- Order collection period (Order entry, modification and cancellation is allowed)
- Order matching period.

The computation of Indicative Opening Price (IOP) and matching logic shall be same as pre-open session for Cash Market segment. In call auction market, after matching period is over all the outstanding orders shall be cancelled.

This market consists of SME (Small & Medium Enterprise), IPO & Re-listed and illiquid securities.

The Buy back and market maker concept is not there in the market so the 'BBMM Flag' for buy and sell side will be sent as '0' (zero).

The Call Auction Market information data files are generated on the server with the extension \*.ca2.

The \*.ca2 ("\*" stands for a number) files contain market statistics and order information of the securities that are being traded in the call auction market in the last 1 minutes along with their open, high, low and close price. The file contains a single record for every security that is traded during that file interval. These files are generated during normal trading period. These files are generated in incremental count number on a trading day starting from 1.ca2.

For more details, please refer to NSE Circular [CMTR23063](#)

#### **4.3 Security Information**

The Securities.dat file is the master file that contains the updated information of all securities traded on the Exchange. The Security Token numbers uniquely identify each security listed on the NSE. The token number, Symbol and Series identify a single and unique security.

#### **4.4 Bhavcopy Information**

The bhavcopy information file is generated after trading hours. The file name is CMBhavcopy\_DDMMYYYY.txt. This file contains the End of the Day values of the securities that are traded on that trading day.

**Note:** Dummy symbols shall be received in MBP file in an affixed pattern where the last 7 character shall remain "**NSETEST**". Kindly ignore dummy securities trade volume and pricing information which is coming in MBP file.

## 5. Data Structure Details

### 5.1 Market Information

Directory Path	/<Product Root>/DATA/<MonthDDYYYY>
File Name	*.mkt
Compression	Compressed (.gz)
Generation Frequency	At fixed intervals

Field Name	Data Type	Value	Brief Description
<b>INFO HEADER</b>			
Transcode	SHORT	Numeric	<a href="#">Transaction message number</a> . This describes the type of message received or sent.
Timestamp	LONG	Numeric	This field should be set to numeric zero while sending to the host. This is used in host end.
Message Length	SHORT	Numeric	This field should be set to the length of the entire message, including the length of message header while sending to host.
<b>Info Header Length</b>	<b>8 Bytes</b>		
<b>INFO DATA</b>			
Security Token	LONG	Numeric	This field contains the token number
Last Traded Price	LONG	Numeric	This field contains the price at which the latest trade in a security has taken place.
Best Buy Quantity	LONG LONG	Numeric	This field contains the total Buy Quantity
Best Buy Price	LONG	Numeric	The highest price for a Buy auction.
Best Sell Quantity	LONG LONG	Numeric	This field contains the total Sell quantity
Best Sell Price	LONG	Numeric	This is the lowest price for a Sell auction

Total Traded Quantity	LONG LONG	Numeric	This field contains the total quantity of a security traded on the current day
Average Traded Price	LONG	Numeric	This field contains the average price of all the trades in a security.
Open Price	LONG	Numeric	This field contains the open price of a security
High Price	LONG	Numeric	This field contains the highest trade price.
Low Price	LONG	Numeric	This field contains the lowest trade price.
Close Price	LONG	Numeric	This field contains the closing price of a security.
Interval High Price	LONG	Numeric	This field contains the highest trade price during interval
Interval Low Price	LONG	Numeric	This field contains the lowest trade price during interval
Interval Open Price	LONG	Numeric	This field contains the open price of a security during interval
Interval Close Price	LONG	Numeric	This field contains the closing price of a security during interval
Interval Total Traded Quantity	LONG LONG	Numeric	This field contains the total quantity of a security traded during interval
Indicative Close Price	LONG	Numeric	This field contains indicative close price of security. It will be sent in the last 30 minutes of normal session. Until then this will be sent as zero
<b>Info Data Length</b>	<b>88 Bytes</b>		

## 5.2 Indices Information

<b>Directory Path</b>	/<Product Root>/DATA/<MonthDDYYYY>
<b>File Name</b>	*.ind
<b>Compression</b>	Compressed (.gz)
<b>Generation Frequency</b>	At fixed intervals

Field Name	Data Type	Value	Brief Description
<b>INFO HEADER</b>			
Transcode	SHORT	Numeric	<a href="#">Transaction message number</a> . This describes the type of message received or sent.
Timestamp	LONG	Numeric	This field should be set to numeric zero while sending to the host. This is used in host end.
Message Length	SHORT	Numeric	This field should be set to the length of the entire message, including the length of message header while sending to host.
<b>Info Header Length</b>	<b>8 Bytes</b>		
<b>INFO DATA</b>			
Index Token	LONG	Numeric	Token number of the index being updated.
Index Open Value	LONG	Numeric	This field contains the opening index value at the time of market open.
Current Index Value	LONG	Numeric	This field contains the online market index value at that instance of broadcast.
High Index Value	LONG	Numeric	This field contains the day's highest index value at the time of broadcast
Low Index Value	LONG	Numeric	This field contains day's lowest index value at the time of broadcast.

Percentage Change in Index	LONG	Numeric	This field contains the percent change in current index with respect to yesterday's closing index
Interval High Index Value	LONG	Numeric	This field contains today's high index in interval
Interval Low Index Value	LONG	Numeric	This field contains today's low index in interval
Interval Open Index Value	LONG	Numeric	This field contains the opening index value at interval
Interval Close Index Value	LONG	Numeric	This field contains today's closing index at interval
Indicative Close Value	LONG	Numeric	This field contains the indicative index close value.
<b>Info Data Length</b>	<b>44 Bytes</b>		

### 5.3 Security Information

<b>Directory Path</b>	/<Product Root>/SECURITY/<MonthDDYYYY>
<b>File Name</b>	Securities.dat
<b>Compression</b>	Not compressed
<b>Generation Frequency</b>	Once (EOD)

Field Name	Data Type	Value	Brief Description
<b>INFO HEADER</b>			
Transcode	SHORT	Numeric	<a href="#">Transaction message number</a> . This describes the type of message received or sent.
Timestamp	LONG	Numeric	This field should be set to numeric zero while sending to the host. This is used in host end.
Message Length	SHORT	Numeric	This field should be set to the length of the entire message, including the length of message header while sending to host.
<b>Info Header Length</b>	<b>8 Bytes</b>		
<b>INFO DATA</b>			
Token Number	LONG	Numeric	Token number of the security being updated.
Symbol	CHAR [10]	Character	This field contains the Symbol of the security. (BSE exclusive securities shall have "\$" suffixed in the symbol)
Series	CHAR [2]	Character	This field contains the series of a security.
Issued Capital	DOUBLE	Numeric	Issue size of the security
Settlement Cycle	SHORT	Numeric	This field contains the period by which settlement between the parties should take place. This value is defaulted by the Exchange and cannot be modified by the user.

Freeze Percent	SHORT	Numeric	This field contains the volume freeze percent with respect to issued capital.
Credit Rating	CHAR [12]	Character	This field contains the credit rating of the security.
Issue Rate	SHORT	Numeric	Price of the issue.
Issue Start Date	LONG	Numeric	Date of issue of the security.
Issue Pdate	LONG	Numeric	Interest payment date
Issue Maturity Date	LONG	Numeric	Maturity date
Board Lot Quantity	LONG	Numeric	Regular lot size.
Tick Size	LONG	Numeric	Tick size/ Min spread size
Name of Company	CHAR [25]	Character	Name of the company
Record Date	LONG	Numeric	Date of record changed.
Expiry Date	LONG	Numeric	This field contains the last date of trading before any corporate action
No Delivery Start Date	LONG	Numeric	Date from when physical delivery of share certificates is stopped for book closure
No Delivery End Date	LONG	Numeric	No delivery end date.
Book Closure Start Date	LONG	Numeric	Date at which the record books in the company for shareholder names start.
Book Closure End Date	LONG	Numeric	Date at which the record books in the company for shareholder names end
SSEC	SHORT	Numeric	This is used as an identifier for different market securities. 0 - Not used. 1 - Securities (except SME) eligible in Normal market and Odd Lot markets 2 - IPO Session is being held security (including SME). 3 - Re-list Session is being held security (including SME). 4 - Illiquid security eligible for Call Auction session (CA2) (including SME). 5 - SME securities eligible in normal market.

Permitted To Trade	CHAR [1]	Character	'0' - Listed but not permitted to trade '1' - Permitted to trade '2' - BSE listed (BSE exclusive security will be available, however trading on the same will be allowed only in case of outage at BSE)
<b>Info Data Length</b>	<b>114 Bytes</b>		

**Note:** Settlement Cycle can have two values; either 0 or 1. Value of 0 means Settlement Cycle of the security is T+0 and 1 means Settlement Cycle of the security is T+1.

## 5.4 BOD - INAV Symbol mapping to NSE Symbol

This file provides a mapping of security symbol to Indicative NAV (INAV) symbol. It contains data that links the symbol of security to its corresponding INAV symbol

<b>Directory Path</b>	/<Product Root>/SECURITY/<MonthDDYYYY>
<b>File Name</b>	Inav.dat
<b>Compression</b>	Not compressed
<b>Generation Frequency</b>	Once (BOD)

Field Name	Data Type	Value	Brief Description
<b>INFO HEADER</b>			
Transcode	SHORT	Numeric	<a href="#">Transaction message number</a> . This describes the type of message received or sent.
Message Length	SHORT	Numeric	This field should be set to the length of the entire message, including the length of message header while sending to host.
<b>Info Header Length</b>		<b>4 Bytes</b>	
<b>INFO DATA</b>			
INAV Symbol	CHAR [10]	Character	Mapped INAV Symbol with Security symbol
Token Number	LONG	Numeric	Token for NSE symbol is Unique identifier for the securities listed on NSE.
Symbol	CHAR [10]	Character	NSE Security symbol for INAV symbol
<b>Info Data Length</b>		<b>24 Bytes</b>	

## 5.5 Bhavcopy Information

This data file does not contain the Header field.

<b>Directory Path</b>	/<Product Root>/BHAVCOPY/<MonthDDYYYY>
<b>File Name</b>	CMBhavcopy_DDMMYYYY.txt
<b>Compression</b>	Not compressed
<b>Generation Frequency</b>	Once (EOD)

<b>Field Name</b>	<b>Data Type</b>	<b>Value</b>	<b>Brief Description</b>
<b>INFO DATA</b>			
Symbol	CHAR [10]	Character	This field contains the Symbol of the security.
Series	CHAR [2]	Character	This field contains the series of a security.
Trade High Price	CHAR [10]	Character	This field contains the highest trade price.
Trade Low Price	CHAR [10]	Character	This field contains the lowest trade price.
Opening Price	CHAR [10]	Character	This field contains the indicative opening price (IOP) of a security for order collection period session and Final Open Price of a security in matching period.
Closing Price	CHAR [10]	Character	This field contains the closing price of a security
Previous Close Price	CHAR [10]	Character	This field contains the previous day's closing price of the security
Total Traded Quantity	CHAR [12]	Character	This field contains the total quantity of a security traded on the current day
Total Traded Value	CHAR [25]	Character	This field contains the total value of the securities traded
Carriage Return/ Line Feed	CHAR [2]	Character	Carriage Return/ Line Feed
<b>Info Data Length</b>	<b>101 Bytes</b>		

## 5.6 Call Auction Market Information

<b>Directory Path</b>	/<Product Root>/DATA/<MonthDDYYYY>
<b>File Name</b>	*.ca2: Call Auction Market
<b>Compression</b>	These files are compressed (.gz)
<b>Generation Frequency</b>	At fixed intervals

Field Name	Data Type	Value	Brief Description
<b>INFO HEADER</b>			
Transcode	SHORT	Numeric	<a href="#">Transaction message number</a> . This describes the type of message received or sent.
Timestamp	LONG	Numeric	This field should be set to numeric zero while sending to the host. This is used in host end.
Message Length	SHORT	Numeric	This field should be set to the length of the entire message, including the length of message header while sending to host.
<b>Info Header Length</b>	<b>8 Bytes</b>		
<b>INFO DATA</b>			
Security Token	LONG	Numeric	Security Token
Last Traded Price	LONG	Numeric	During order collection as well as during matching, it contains LTP of the security
Best Buy Quantity	LONG LONG	Numeric	Best buy side limit order, price and quantity information.
Best Buy Price	LONG	Numeric	For BBMM flag refer <a href="#">9.3 Market Maker &amp; Buy Back Flag (MMBB Flag)</a>
Buy BBMM Flag	CHAR [1]	Character	<a href="#">Market Maker &amp; Buy Back Flag (MMBB Flag)</a>
Best Sell Quantity	LONG LONG	Numeric	Best sell side limit order, price and quantity information.
Best Sell Price	LONG	Numeric	For BBMM flag refer <a href="#">9.3 Market Maker &amp; Buy Back Flag (MMBB Flag)</a>
Sell BBMM Flag	CHAR [1]	Character	<a href="#">Market Maker &amp; Buy Back Flag (MMBB Flag)</a>

Total Traded Quantity	LONG LONG	Numeric	This field contains the total quantity of a security traded on the current day
Indicative Traded Quantity	LONG LONG	Numeric	During order collection period this field will contain Indicative Equilibrium Quantity
Average Traded Price	LONG	Numeric	During order collection period it will always be zero. Once matching starts it will contain the Average Trade Price.
First Open Price	LONG	Numeric	During first call auction order collection period this field will be zero. Once matching starts it will contain the First Trade Price. Once updated for all subsequent call auctions it will not change. This field may remain zero till the first trade happens
Open Price	LONG	Numeric	This field contains the indicative opening price (IOP) of a security for order collection period session and Final Open Price of a security in matching period.
High Price	LONG	Numeric	During order collection period it will always be zero. Once matching starts it will be updated.
Low Price	LONG	Numeric	During order collection period it will always be zero. Once matching starts it will be updated.
Close Price	LONG	Numeric	This field contains the closing price of a security.
Filler	LONG	Numeric	Zero
<b>Info Data Length</b>	<b>78 Bytes</b>		

## 6. File Transcode List

Details	Transcode number
<a href="#"><u>MARKET PRE-OPEN INFORMATION</u></a>	3
<a href="#"><u>MARKET STATISTICS INFORMATION</u></a>	5
<a href="#"><u>NEW SECURITY INFORMATION</u></a>	7
<a href="#"><u>MARKET INDICES INFORMATION</u></a>	8
<a href="#"><u>CALL AUCTION MARKET INFORMATION</u></a>	9
<a href="#"><u>INAV SYMBOL MAPPING TO NSE SYMBOL</u></a>	10

## 7. List of Indices

The Indices generated during the trading cycle are identified by Index names. The feed shall not bear these names. Instead, a unique Index token shall identify each index. The clients need to decode the index files by providing following combinations of the Index Token number and Index Name.

Index Token	Index Name	Broadcast Name
0	Nifty 50	NIFTY 50
1	Nifty IT	NIFTY IT
2	Nifty Next 50	NIFTY NEXT 50
3	Nifty 50 USD (NOT IN USE)	NIFTY50 USD (NOT IN USE)
4	Nifty Bank	NIFTY BANK
5	Nifty Midcap 100	NIFTY MIDCAP 100
6	Nifty 500	NIFTY 500
7	Nifty 100	NIFTY 100
8	Nifty Midcap 50	NIFTY MIDCAP 50
9	Nifty Realty	NIFTY REALTY
10	Nifty Infrastructure	NIFTY INFRA
11	INDIA VIX	INDIA VIX
12	Nifty Energy	NIFTY ENERGY
13	Nifty FMCG	NIFTY FMCG
14	Nifty MNC	NIFTY MNC
15	Nifty Pharma	NIFTY PHARMA
16	Nifty PSE	NIFTY PSE
17	Nifty PSU Bank	NIFTY PSU BANK
18	Nifty Services Sector	NIFTY SERV SECTOR
19	Nifty Auto	NIFTY SMLCAP 100
20	Nifty Media	NIFTY 200
21	Nifty Metal	NIFTY AUTO
22	Nifty Smallcap 100	NIFTY MEDIA
23	Nifty 200	NIFTY METAL
24	Nifty Dividend Opportunities 50	NIFTY DIV OPPS 50
25	Nifty Commodities	NIFTY COMMODITIES
26	Nifty India Consumption	NIFTY CONSUMPTION
27	Nifty Financial Services	NIFTY FIN SERVICE
28	Nifty50 Dividend Points	NIFTY50 DIV POINT
29	Nifty100 Liquid 15	NIFTY100 LIQ 15
30	Nifty CPSE	NIFTY CPSE
31	Nifty Growth Sectors 15	NIFTY GROWSECT 15
32	NIFTY50 TR 2X Leverage	NIFTY50 TR 2X LEV
33	NIFTY50 PR 2x Leverage	NIFTY50 PR 2X LEV
34	NIFTY50 TR 1X Inverse	NIFTY50 TR 1X INV
35	NIFTY50 PR 1X Inverse	NIFTY50 PR 1X INV

36	Nifty50 Value 20	NIFTY50 VALUE 20
37	NIFTY100 Quality 30	NIFTY100 QUALTY30
38	Nifty Midcap Liquid 15	NIFTY MID LIQ 15
39	Nifty Private Bank	NIFTY PVT BANK
40	Nifty 8-13 yr G-Sec	NIFTY GS 8 13YR
41	Nifty 10 yr Benchmark G-Sec	NIFTY GS 10YR
42	Nifty 10 yr Benchmark G-Sec (Clean Price)	NIFTY GS 10YR CLN
43	Nifty 4-8 yr G-Sec Index	NIFTY GS 4 8YR
44	Nifty 11-15 yr G-Sec Index	NIFTY GS 11 15YR
45	Nifty 15 yr and above G-Sec Index	NIFTY GS 15YRPLUS
46	Nifty Composite G-sec Index	NIFTY GS COMPSITE

73	INDEX2 NSETEST	INDEX2 NSETEST

## 8. Notes

### 8.1 All prices are in Paisa.

All price fields are multiplied by 100 and this implies that the prices received must be divided by 100.

For India VIX index, the index value is of four decimal precisions. Hence, the values received for the India VIX index must be divided by 10000.

### 8.2 Timestamp

The timestamp is the number of seconds elapsed from midnight Jan 1, 1980.

### 8.3 Call Auction Market

Call auction Market includes Periodic Call auction session for illiquid scrips and call auction in pre-open2 session (IPO and Re-listed securities).

### 8.4 Market Maker & Buy Back Flag (MMBB Flag)

For the probable values of BBMM flag refer the table given below

1. **Sell BBMM Flag:** Buy Back or Market Maker order at that price point.
2. **Buy BBMM Flag:** Buy Back or Market Maker order at that price point.

Buy_Back_Order Exists	Market_Maker_Order Exists	Sell BBMM Flag/ Buy BBMM Flag
No	No	'0'
Yes	No	'1'
No	Yes	'2'
Yes	Yes	'3'

E.g. If Buy Back and Market Maker orders exist at price point then the above fields will contain '3'.

## 9. About SFTP (Secure File Transfer Protocol)

The file transfer takes place over SFTP (Secure FTP) protocol over the Internet.

The client is required to submit the SSH RSA Public Key of their machine along with their static public IP address to receive access details from NSE Data & Analytics (NDAL).

The following details will be provided once the request is processed by NDAL:

- URL
- SSH Service Port
- User ID
- File Path

General information on SFTP has been provided in the following sections for popular OS platforms.

### 9.1 SFTP on Linux platform

The OpenSSH suite, which comes pre-installed in most Linux distributions, can be used for transferring files securely using SFTP.

The SSH key-pair is generally generated in the ".ssh" directory in the user's home directory.

It is highly recommended that you consult your systems administrator to generate/locate the key-pair and set up SFTP for you.

Continue reading for information on how to generate the key-pair.

#### 9.1.1 Generation of the SSH RSA key-pair on Linux

- Generate the new key-pair with following command:

```
ssh-keygen -t rsa -C "user@host"
```

- You will receive the following prompt:

```
Generating public/private rsa key pair.  
"Enter file in which to save the key".
```

Press the Enter to continue with the defaults.

You will receive the following prompt:

```
Enter file in which to save the key.  
(/host/users/user/.ssh/id_rsa):
```

Press the Enter to continue with the defaults.

- If a file already exists with the same name, then you will receive the following prompt:

```
/host/users/user/.ssh/id_rsa already exists.  
Overwrite (y/n)?
```

Type "y" and press Enter to overwrite.

- You will be prompted to enter a passphrase as follows:

```
Enter passphrase (empty for no passphrase) :  
Press Enter to continue without a passphrase.
```

Your will be prompted to re-enter the passphrase:

```
Enter same passphrase again:
```

Press Enter again to continue without a passphrase.

- After you enter a passphrase, you will be presented with the "Fingerprint" (or ID) of your SSH key.

It will look something like this:

```
Your identification has been saved in  
/host/users/user/.ssh/id_rsa.  
Your public key has been saved in  
/host/users/user/.ssh/id_rsa.pub.  
The key fingerprint is:  
87:c4:85:90:91:16:39:de:c2:26:49:4a:b3:38:80:97 user@host
```

After generating public key, user needs to share the Public Key file with exchange for requesting the credentials.

**NOTE:** In above steps the words "host" and "user" are used to represent the host name and username of the machine. This is used for demo purpose only. The same will differ as per your server and usernames.

### 9.1.2. SFTP Login

Login to the Exchange Server over SFTP using the following command:

```
sftp -o PORT=6010 remote_user@remote_host
```

Where remote user is the User ID provided to you by the Exchange upon sharing your Public Key and remote host is the Exchange Server IP.

You should get the SFTP prompt as below, upon successful login:

```
Connecting to 192.168.1.100...  
"NOTICE TO USERS"  
  
"The system is to be used for AUTHORIZED business purpose only.  
All activities on this system are being monitored. Unauthorized access  
to this system may be subject to legal action, and/or prosecution"  
sftp> |
```

### **9.1.3 Fetching files over SFTP**

The SFTP “get” command may be used at the SFTP prompt for fetching the files while logged into the host over SFTP.

### **9.1.4 Ending the SFTP session.**

The SFTP “bye” command may be used for terminating the session.

### **9.1.5 SFTP commands help.**

Help may be obtained with SFTP commands by typing the “help” command at the SFTP prompt.

## 9.2 SFTP on Windows platform

### 9.2.1 Generation of the SSH RSA key-pair on Windows

This guide explains how to generate the SSH RSA key-pair using the PuttyGen application.

Download the PuttyGen application (freely available on the Internet). Then follow these steps to generate the key-pair:

- Start the PuttyGen application.

You will be presented with a dialog which looks something like this:

- Select “SSH2RSA” with 2048-bit size or greater.
- Press the “Generate” button.
- After generating the key, you will be shown the screen below. Keep the “Key passphrase” and “Confirm passphrase” as blank.

- Create a blank file with the name "id\_rsa.pub".  
This will be the public key file which will be populated with your Public Key and shared with the Exchange.
- Copy the public key content as presented on the screen (selected area in the below screenshot) and paste into newly created public key file (id\_rsa.pub) and save the file.
- Share this Public Key File (id\_rsa.pub) with the Exchange when requesting for SFTP credentials.

### 9.2.2 SFTP Client Software on Windows

There are multiple SFTP Client Programs (paid for and free) available for transferring files over SFTP.

One such software is WinSCP, available for free from the WinSCP website. This program is intuitive, user friendly and can be used in interactive mode (GUI) as well as from the command line (for automation/batch processing).

Information on using WinSCP can be found on the WinSCP website.

### 9.3 Further support

Apart from the above guide, many of the online resources can be referred on the World Wide Web for more information on how to set up and use SFTP at the Client's site on various OS platforms.

**Note:** This "About SFTP" section is intended as a guide used to understand and become familiarized with this transfer protocol.

It may be noted that the Exchange does not provide SFTP software or support for configuring and using SFTP at Client site.

## 10. Decoding Snapshot files

Please refer following C snippet for decoding snapshot files:

```

HEADER header      = {0};
DATA_MBP data_mbp = {0};
DATA_CA2 data_ca2 = {0};
DATA_IND data_ind = {0};
TRAILER trailer   = {0};

int main()
{
    gzFile fpFile = gzopen("1.mkt.gz", "rb");
    while
    {
        int nRetVal = gzread(fpFile, &header, sizeof(HEADER));
        if(header.nTranscode == MBP)
        {
            gzread(fpFile, &data_mbp, sizeof(data_mbp));
            print(&data_mbp);
        }

        else if(header.nTranscode == CA2)
        { gzread(fpFile, &data_ca2, sizeof(data_ca2)); }

        else if(header.nTranscode == IND)
        { gzread(fpFile, &data_ind, sizeof(data_ind)); }

        nRetVal = gzread(fpFile, &trailer, sizeof(TRAILER));
        if(gzeof(fpFile) == 1)
        {
            printf("EOF reached ");
            break;
        }
    }
    gzclose(fpFile);
}

void print(DATA_MBP *data_mbp)
{
    printf("Security Token = %d ,Last Traded Price = %d,
    Best Buy Quantity = %d, ...." ,data_mbp->SecurityToken,
    data_mbp->LastTradedPrice,data_mbp->BestBuyQuantity);
}

```

## 11. Annexure

### 11.1 Acronyms Used

BOD	Begin Of Day Information
EOD	End Of Day Information
Online	Information Sent During Market Timing
CM	Cash Market
F&O/FAO	Future & Options Market
CD	Currency Derivatives Market
WDM	Wholesale & Debt Market
COM	Commodity Market
CBRICS	Corporate Bond Reporting and Integrated Clearing System
NSE IX	NSE International Exchange
MTBT	Multicast Tick By Tick
MBP	Market By Price
OI	Open Interest

## 12. FAQs

1) Download of files through SFTP was working till last week, suddenly our connection to sftp is failing. How do we resolve it?

If using SFTP on Windows, please ensure you are using the latest version of Winscp or any other equivalent tool.

If you are using SFTP programmatically or through an API, please ensure you **don't use the following cipher**:

- diffie-hellman-group-exchange-sha1
- diffie-hellman-group14-sha1
- diffie-hellman-group1-sha1

2) How do we decode compressed \*.mkt and \*.oi files?

Please refer [section 10](#) for decoding Snapshot Files, which involves decompression and reading of \*.mkt and \*.oi files.

3) How to identify BSE listed securities?

BSE exclusive securities shall have "\$" suffixed in the associated symbol field at NSE. Below are the examples.

Symbol at BSE	Symbol at NSE (up to 10 characters)
SYMBOLABCDE	SYMBOLABC\$
SYMBOLKLMN	SYMBOLKLM\$
SYMBOLAB	SYMBOLAB\$

All symbol fields in security packets shall contain BSE exclusive securities along with NSE securities.

4) Why are the mkt files generated empty between 09:10:00 to 09:15:00?

The mkt files are generated empty between 09:10:00 and 09:15:00 because this period is dedicated to order matching in the NSE pre-open session. During this time:

- No actual trades occur, as the exchange is determining the equilibrium price.
- Since no transactions take place, there are no trade confirmations or price updates to record.

- As a result, the mkt files remain empty, reflecting the absence of trading activity.

This is an expected behaviour in the pre-open session, ensuring a smooth transition into the normal trading session at 9:15 AM.
