SCHEME BACKGROUND

As part of its disinvestment programme, the Government of India ("GOI"), through Department of Investment and Public Asset Management, Ministry of Finance, Government of India (the "DIPAM") approved the setting up of a new exchange traded fund ("ETF") comprising shares of Central Public Sector Enterprises ("CPSE") and GoI stake in other corporate entities (together with CPSE, "Companies").

DIPAM has appointed ICICI Prudential Asset Management Company Limited (the "AMC") to launch and manage the BHARAT 22 ETF in accordance with SEBI Regulations. In accordance with this, the AMC had formulated this Scheme, which was initially offered to the public for Subscription by way of a New Fund Offer (NFO). The Scheme, out of the proceeds of the NFO, purchased the shares of constituent companies of the S&P BSE Bharat 22 Index in similar composition and weightages as they appear in the S&P BSE Bharat 22 Index (the Underlying Index). The President of India (the "Seller"), acting through DIPAM, sold the shares at a discounted rate to the Scheme and the AMC in turn created and allotted Units of the Scheme, to the Investors. Subsequently, after the closure of the NFO, the Units were listed on the Exchanges in the form of an Exchange Traded Fund ("ETF") tracking the S&P BSE Bharat 22 Index.

Further in accordance with the directions received from DIPAM, the AMC had launched the Further Fund Offer (FFO) and Additional Offer (AO) of the Scheme in June 2018 and February 2019 respectively, offering the public opportunity for subscribing to the units of the Scheme. The proceeds of the FFO and AO had been utilized for purchase of shares of companies forming part of the Underlying Index in similar composition and weightages as they appear in the index. The Seller, acting through DIPAM, had sold the shares (as per the terms of FFO and AO) at discounted rates to the Scheme for the benefit of the Investors who had participated and received allotment in the respective FFO and AO of the Scheme. The AMC had in turn created and allotted Units of the Scheme to these Investors. Post allotment, units of the Scheme were listed (and continue to be listed) on the Exchanges.

In accordance with the letter of approval from DIPAM dated September 17, 2019 to the AMC, the Seller intends to sell further shares to the Scheme. The AMC has therefore formulated this FFO 2 of the Scheme, which is being offered to the public for subscription in accordance with the SEBI Regulations. As undertaken during various tranches of the Scheme, it is proposed that the Mutual Fund would, out of the proceeds of the FFO 2, purchase the shares as represented in the constituent companies of S&P BSE Bharat 22 Index in similar composition and weightages as they appear in the S&P BSE Bharat 22 Index. The Seller, acting through DIPAM, will sell the shares at a rate (discounted, as applicable) to the Scheme and the AMC will in turn create and allot Units of the Scheme to Investors. In case of partial purchase of the underlying Index constituents from the Seller, the Scheme shall purchase the remaining portion of the underlying Index constituents from the open market, on behalf of the investors. Subsequently, after the closing of the FFO 2, the FFO 2 units will also be listed on the Exchanges in the form of an ETF tracking the S&P BSE Bharat 22 Index.

Investors / Unit holders to note that the FFO 2 would not preclude, restrict or in any way prohibit the Seller from undertaking further divestments by selling additional shares to the Scheme through the Additional Offerings, details of which are provided in this Supplement and the SID (as amended from time to time).

Investors / Unit holders should also note that this FFO 2 would not preclude, restrict or in any way prohibit the Seller from undertaking further divestments by selling additional

shares to the Scheme for any additional FFOs launched by the Mutual Fund / Trustee Company / AMC from time to time, and for such additional FFOs the Mutual Fund / Trustee Company / AMC would issue separate supplements to SID at the relevant time.

DIPAM has appointed Kotak Mahindra Capital Company Limited as the advisor for the FFO 2. DIPAM has been authorized by the President of India, acting through various Departments and Ministries to sell the shares of constituent companies of the S&P BSE Bharat 22 Index to the AMC on behalf of and for the account of the Scheme pursuant to the closing of the FFO 2.

INTRODUCTION TO EXCHANGE TRADED FUNDS (ETF)

ETFs are products that provide exposure to its underlying asset. ETFs generally track an index, a basket of securities, commodities or debt securities. As the name suggests, ETFs are traded on the exchange like a single stock.

ETFs are an innovation to traditional mutual funds as ETFs provide Investors a scheme that closely tracks the performance of underlying asset (equities, debt or commodities) with the ability to buy/sell units on an intra-day basis.

ETFs are structured in a manner which allows to create new Units and redeem outstanding Units directly with the Fund, thereby ensuring that ETFs trade close to their actual NAVs.

ETFs are usually passively managed funds wherein subscription /redemption of units work on the concept of exchange with underlying securities. In other words, Investors/institutions can purchase Units by depositing the underlying asset or equivalent cash amount with the Fund/AMC and can redeem by receiving the underlying asset or equivalent amount of cash in exchange of Units. Units can also be bought and sold directly on the exchange just like a normal tradable listed securities.

ETFs have all the benefits of indexing such as diversification, low cost and transparency. As ETFs are listed on the exchange, costs of distribution are much lower and the reach is wider. These savings in cost are passed on to the Investors in the form of lower costs. Furthermore, exchange traded mechanism helps reduce minimal collection, disbursement and other processing charges.

The structure of ETFs is such that it protects long-term Investors from inflows and outflows of short-term Investor. This is because the Fund does not bear extra transaction cost when buying/selling due to frequent subscriptions and redemptions.

Tracking Error of ETFs is likely to be low as compared to a normal index fund. Due to the creation/redemption of units through the in-kind mechanism, the Scheme can keep lesser funds in cash. Also, time lag between buying/selling units and the underlying shares is much lower.

ETFs are highly flexible and can be used as a tool for gaining instant exposure to the underlying asset, equitising cash or for arbitraging between the cash and futures market.

Features of ETFs:

1. ETFs can be easily bought / sold like any other stock on the exchange through terminals spread across the country.
2. ETFs can be bought/ sold anytime during market hours at prices that are expected to be close to actual NAV of the schemes. Thus, investor invests at real-time prices as opposed to end of day prices.
3. No separate form filling for buying / selling of units is required. It is just a phone call to investors' broker or a click on the net.
4. ETFs have ability to put limit orders.
5. Minimum investment for an ETF is one unit.
6. ETFs facilitate protection to long-term investors from the inflows and outflows of short-term investors.
7. ETFs are flexible as it can be used as a tool for gaining instant exposure to the respective underlying asset, equitising cash, hedging or for arbitraging between the cash and futures market.

8. ETFs help in increasing liquidity of underlying cash market.
9. ETFs aid to low cost arbitrage between futures and cash market.
10. An investor can get a consolidated view of his investments without adding too many different account statements as the Units issued would be in demat form.

I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

- Investment in Mutual Fund Units involve investment risks such as trading volumes, settlement risks, liquidity risks, default risks, including the possible loss of principal.
- Mutual Funds and securities investments are subject to market risks and there is no assurance or guarantee that the objectives of the Scheme will be achieved.
- As the price/value/interest rates of the securities in which the Scheme invests fluctuates, the value of your investments in the Scheme may go up or down. The Sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the contribution of an amount of Rs. 22.2 lakhs collectively made by them towards setting up the Fund and such other accretions and additions to the corpus set up by the Sponsors.
- BHARAT 22 ETF is only the name of the Scheme and does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- BHARAT 22 ETF is an Exchange Traded Fund (ETF). There can be no assurance that an active secondary market will develop or be maintained.
- The NAV of the Scheme may be affected by changes in the general level of interest rates and trading volumes.
- The NAV of the Scheme may be affected by settlement periods and transfer procedures.
- In the event of receipt of inordinately large number of redemption requests or of a restructuring of the Scheme's portfolios, there may be delays in the redemption of Units.
- The Liquidity of the Scheme's investments is inherently restricted by trading volumes.
- Investors in the Scheme are not being offered any guaranteed returns.
- Mutual funds being vehicles of securities investments are subject to market and other risks and there can be no guarantee against loss resulting from investing in the Scheme. The various factors which impact the value of the Scheme's investments include, but are not limited to, fluctuations in interest rates, prevailing political and economic environment, changes in government policy, factors specific to the issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes etc.
- The past performance of the mutual funds managed by the Sponsors and their affiliates/associates is not indicative of the future performance of the Scheme.
- Investment decisions made by the AMC may not always be profitable.
- From time to time and subject to the Regulations, the Sponsors, the Mutual Funds and investment companies managed by them, their affiliates, their associate companies, subsidiaries of the Sponsors, and the AMC may invest either directly or indirectly in any or all the Schemes. The funds managed by these affiliates, associates, the Sponsors, subsidiaries of the Sponsors and /or the AMC may acquire a substantial portion of the Scheme's Units and collectively constitute a major investor in the Scheme. Accordingly, redemption of Units held by such funds, affiliates/associates and Sponsors might have an adverse impact on the Units of the Scheme because the timing of such redemption may impact the ability of other Unit holders to redeem their Units.
- Further, as per the Regulation, in case the AMC invests in any of the Schemes managed by it, it shall not be entitled to charge any fees on such investments.

Scheme Specific Risk Factors:

Risks associated with investing in Equities

The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as trading volumes, settlement periods and transfer procedures, price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Governments, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down.

Market Risk

The Scheme's NAV will react to the stock market movements. The Investors could lose money over short periods due to fluctuation in the Scheme's NAV in response to factors such as economic and political developments, changes in interest rates and perceived trends in stock prices and market movements, and over longer periods during market downturns.

Market Trading Risks

- **Absence of Prior Active Market:** Although units of the Scheme are to be listed on the Exchanges, there can be no assurance that an active secondary market will develop or be maintained.
- **Lack of Market Liquidity:** Trading in units of the respective Scheme on the Exchange may be halted because of market conditions or for reasons that in the view of the Market Authorities or SEBI, trading in units of the Scheme are not advisable. In addition, trading in units of the Scheme is subject to trading halts caused by extraordinary market volatility and pursuant to BSE/NSE and SEBI "circuit filter" rules. There can be no assurance that the requirements of the Market necessary to maintain the listing of units of the Scheme will continue to be met or will remain unchanged.
- **Units of the Scheme may trade at Prices Other than NAV:** Units of the Scheme may trade above or below its NAV. The NAV of the Scheme will fluctuate with changes in the market value of Scheme's holdings. The trading prices of units of the Scheme will fluctuate in accordance with changes in their NAVs as well as market supply and demand of units of the Scheme. However, given that units can be created and redeemed only in Creation Units directly with the Fund, it is expected that large discounts or premiums to the NAVs of the Scheme will not sustain due to arbitrage possibility available.
- **Regulatory Risk:** Any changes in trading regulations by the Stock Exchange/s or SEBI may affect the ability of market maker to arbitrage resulting into wider premium/discount to NAV. Although, the units are listed on BSE and NSE, the AMC and the Trustees will not be liable for delay in listing of Units of the Scheme on the stock exchanges / or due to connectivity problems with the depositories and/or due to the occurrence of any event beyond their control.

- **Settlement Risk:** In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances. Similarly, the inability to sell securities held in the Scheme portfolio may result, at times, in potential losses to the Scheme, and there can be a subsequent decline in the value of the securities held in the Scheme's portfolio.
- **Right to Limit Redemptions:** The Trustee, in the general interest of the Unit holders of the Scheme offered in this Document and keeping in view the unforeseen circumstances / unusual market conditions, may limit the total number of Units which can be redeemed on any Business Day. Investors are requested to refer the paragraph on 'Ongoing price for subscription/redemption by investors' under 'ONGOING OFFER DETAILS'.

Portfolio Concentration Risk

To the extent that the Scheme may concentrate its investments in the Securities of companies of certain sectors, the Scheme will therefore be subject to the risks associated with such concentration. In addition, the Scheme may be exposed to higher levels of volatility and risk than would generally be the case in a more diverse fund portfolio of equity Securities. Such risks may impact the Scheme to the extent that it invests in particular sectors even in cases where the investment objective is more generic.

Risk relating to underlying securities

Since the underlying companies are substantially owned by the Seller, the agenda of the Seller may at times be focused on the social good and therefore may not always be aimed at profit maximization for the Unit holder. The interests of the Seller may be different from the interests of Unit holders and as a result, the Seller may take actions that may not be in the best interests of Unit holders. There can be no assurance that such incidents would not result in a fall in price of the underlying securities constituting the underlying Index and correspondingly the NAV of the Scheme.

Risk relating to receiving underlying Securities from the Seller

In accordance with the letter of approval from DIPAM dated September 17, 2019 to the AMC, the Seller intends to sell further shares to the Scheme. In case of partial purchase of the underlying Index constituents from the Seller, the Scheme shall purchase the remaining portion of the underlying Index constituents from the open market, on behalf of the investors. However, in the event, the Scheme does not receive the underlying Securities from the Seller for any reason whatsoever, including on account of the Seller terminating the agreement with the AMC for breach of any terms under such agreement, the Scheme will not allot Units to the Investors and would refund the Subscription amount to the Investors in accordance with the provisions under this Supplement. In the event the Scheme has already allotted Units to the Investors in anticipation of receipt of the underlying Securities from the Seller, the AMC would cancel the Units allotted to the Investors and refund the Subscription amount to the Investors in accordance with the provisions under this Supplement.

Risks relating to the discount on the FFO 2 Reference Market Price

Investors should note that the FFO 2 Reference Market Price for each of the constituents of the underlying Index would be determined based on the full day volume weighted average price (VWAP) of the constituents of the underlying Index on the BSE during the Non Anchor Investor FFO 2 Period or Additional Offering Period or the FFO 2 Allotment Date, as the case may be. This price could be different from the closing market price for each of the constituents of the underlying Index as on the last day of the Non Anchor Investor FFO 2 Period or Additional Offering Period or the FFO 2 Allotment Date, as the case may be. Since the AMC would be applying the discount offered by the Seller to the Scheme on the FFO 2 Reference Market Price, the discounted price for each of the constituents may or may not be lower than the closing market price for each of the constituents as on the last day of the Non Anchor Investor FFO 2 Period or Additional Offering Period or the FFO Allotment Date, as the case may be. Hence, the discounted price at which the Fund will purchase the underlying constituents of the underlying Index (for the Portfolio Deposit portion) from the Seller on behalf of the Investors under the FFO or the Additional offering might not amount to a discount against the closing market price of the constituents as on the last day of the Non Anchor Investor FFO 2 Period or Additional Offering Period or the FFO Allotment Date, as the case may be.

Risk relating to Loyalty Units

If the AMC does not receive the underlying securities from the Seller for any reason whatsoever, the AMC will not allot Loyalty Units to the Unit holders. Further, the Scheme will allot only whole Units to eligible Investors, and any fractional Units which the Unit holder may be eligible to would be paid by way of cash to the Unit holders based on the applicable NAV as on the Loyalty Unit Record Date. In the event of delay in receipt of the underlying shares for the Loyalty Units from the Seller or any decline in market value of such underlying shares on the date of sale of such underlying shares by the Scheme may result in dilutive effect to all Unit holders.

Risk of Investment Strategy

As the Scheme would be investing in the shares of CPSEs, and other Corporate Entities in which Govt has stake, any government policy which will have an impact on these companies, including any change in the disinvestment policy of the Government, could impact the performance of the Scheme.

Volatility Risk

The equity markets and derivative markets are volatile and the value of securities, derivative contracts and other instruments correlated with the equity markets may fluctuate dramatically from day to day. This volatility may cause the value of investment in the Scheme to decrease.

Redemption Risk

Investors should note that even though the Scheme is an open ended Scheme, subscription/redemptions directly with the Fund would be limited to such investors who have the ability to subscribe/redeem the units of the Scheme in the creation unit size. Generally, this lot size is larger as compared to normal funds. However, investors wishing to subscribe/redeem units in other than specific lot size can do so by buying/selling the same on the Stock Exchange. Investors can also approach the Fund

directly for redemption in other than Creation Unit Size on occurrence of various events as listed in this document.

Passive Investments

The Scheme is a passively managed scheme and may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its Underlying Index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.

Tracking Error Risk

The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal circumstances, the AMC will endeavour that the tracking error of the Scheme does not exceed 2% per annum. However, this may vary due to various reasons mentioned below or any other reasons that may arise and particularly when the markets are very volatile.

Factors such as the fees and expenses of the Scheme, corporate actions, cash balance, changes to the Underlying Index and regulatory policies may affect the AMC's ability to achieve close correlation with the Underlying Index of the Scheme. The Scheme's returns may therefore deviate from those of their Underlying Index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the index and the NAV of the Scheme. Tracking Error may arise due to the following reasons: -

- Expenditure incurred by the Scheme.
- Any delay experienced in the purchase or sale of shares due to illiquidity of the market, settlement and realization of sale proceeds and the registration of any securities transferred and any delays in receiving cash and dividends and resulting delays in reinvesting them.
- Securities trading may halt temporarily due to circuit filters.
- The underlying index reflects the prices of securities at close of business hours. However, the Fund may buy or sell the securities at different points of time during the trading session at the then prevailing prices which may not correspond to the closing prices on the exchange.
- Index service provider undertakes the periodical review of the stocks that comprise the underlying index and may either drop or include new securities, in consultation with the DIPAM. In such an event, the Fund will endeavour to reallocate its portfolio but the available investment/ disinvestment opportunities may not permit precise mirroring of the Index immediately.
- The potential for trades to fail which may result in the Scheme not having acquired shares at a price necessary to track the index.
- The holding of a cash position (0-5% of the Net Assets to meet the redemptions and other liquidity requirements) and accrued income prior to distribution and accrued expenses.
- Disinvestments to meet redemptions, recurring expenses, dividend payouts etc.

Under normal circumstances, such tracking errors are not expected to exceed 2% per annum. However, this may vary due to the reasons mentioned above or any other reasons that may arise and particularly when the markets are very volatile.

Risks associated with Investing in money market instruments

- **Interest Rate risk:** This risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. The values of investments will appreciate/depreciate if the interest rates fall/rise.
- **Credit risk:** This risk arises due to any uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest.
- **Liquidity risk:** The liquidity of a security may change depending on market conditions leading to changes in the liquidity premium linked to the price of the security. At the time of selling the security, the security can become illiquid leading to loss in the value of the portfolio

9. Risks associated with Investing in Tri Party Repo through CCIL (TREPS):

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments.

CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the "Default Waterfall".

As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members.

Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

However, it may be noted that a member shall have the right to submit resignation from the membership of the Security segment if it has taken a loss through replenishment of its contribution to the default fund for the segments and a loss threshold as notified have been reached. The maximum contribution of a member towards replenishment of its contribution to the default fund in the 7 days (30 days in case of securities segment) period immediately after the afore-mentioned loss threshold having been reached shall not exceed 5 times of its contribution to the Default Fund based on the last re-computation of the Default Fund or specified amount, whichever is lower.

Further, it may be noted that, CCIL periodically prescribes a list of securities eligible for contributions as collateral by members. Presently, all Central Government securities and Treasury bills are accepted as collateral by CCIL. The risk factors may

undergo change in case the CCIL notifies securities other than Government of India securities as eligible for contribution as collateral.

Risks associated with investing in securitized debt:

The Scheme will not invest in securitized debt.

Risks associated with investing in ADR/ GDR/ Foreign securities:

The Scheme will not invest in ADR/GDR/Foreign securities.

Risks associated with Short Selling

The Scheme will not engage in short selling of securities.

Risks associated with Securities Lending and Borrowing:

The Scheme may engage in Securities Lending activity.

Securities lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed.

Subject to the Regulations and the applicable guidelines, the Schemes there under may; if the Trustee permits, engage in stock lending. The securities lent will be returned by the borrower on expiry of the stipulated period. The Scheme shall not have exposure of more than 20% of its net assets in stock lending. The AMC shall report to the Trustee on a quarterly basis as to the level of lending in terms of value, volume and the names of the intermediaries and the earnings/losses arising out of the transactions, the value of collateral security offered etc. The Trustees shall offer their comments on the above aspect in the report filed with SEBI under sub-regulation 23(a) of Regulation 18.

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

Risks associated with investing in Derivatives:

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of the fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself.

Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counterparty”) to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Scheme may not be able to sell or purchase derivative quickly enough at a fair price. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Please refer section on “Derivative” for further details.

• **Risk management strategies**

The Scheme by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in equity markets. The risk control process involves identifying & measuring the risk through various risk measurement tools.

The Scheme has identified following risks of investing in equity and designed risk management strategies, which are embedded in the investment process to manage such risks.

Risk and Description	Risk mitigants / management strategy
<u>Risks associated with Equity investment</u>	
<u>Market Risk</u> The Scheme is vulnerable to movements in the prices of securities invested by the Scheme, which could have a material bearing on the overall returns from the Scheme. The value of the underlying Scheme investments, may be affected generally by factors affecting securities markets, such as price and volume, volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets.	Market risk is inherent to an equity scheme. Being a passively managed scheme, it will invest in the securities included in its Underlying Index.
<u>Liquidity risk</u> The liquidity of the Scheme’s investments is inherently restricted by trading volumes in the securities in which they invests.	The Scheme will try to maintain a proper asset-liability match to ensure redemption payments are made on time and not affected by illiquidity of the underlying stocks.
<u>Tracking Error risk (Volatility/ Concentration risk):</u> The performance of the Scheme may not commensurate with the performance of the underlying Index viz. S&P BSE Bharat 22	<u>Tracking Error risk (Volatility/ Concentration risk):</u> Over a short to medium period, the Scheme may carry the risk of variance between portfolio composition and

Index on any given day or over any given period.	Benchmark. The objectives of the Scheme are to closely track the performance of the Underlying Index over the same period, subject to tracking error. The Scheme would endeavor to maintain a low tracking error by actively aligning the portfolio in line with the Index.
<u>Derivatives Risk</u> As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives since derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds.	Derivatives will be used in the form of Index Options, Index Futures and other instruments as may be permitted by SEBI. All derivatives trade will be done only on the exchange with guaranteed settlement. No OTC contracts will be entered into.

<u>Risks associated with Debt investment</u>	
<u>Market Risk/ Interest Rate Risk</u> As with all debt securities, changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.	The Scheme may invest only in money market instruments having a residual maturity upto 91 days thereby mitigating the price volatility due to interest rate changes generally associated with long-term securities.
<u>Liquidity or Marketability Risk</u> This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM).	The Scheme may invest only in government securities and money market instruments. The liquidity risk for government securities, money market instruments is generally low.
<u>Credit Risk</u> Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security).	Management analysis will be used for identifying company specific risks. Management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and

	disclosure standards will also be made to assess the overall financial risk of the potential borrower.

 - a. Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - b. Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point 1.
 - c. Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - d. The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
6. Mutual Funds may enter into interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.
7. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point 1.
8. Definition of Exposure in case of Derivative Positions - Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts

Various Derivatives Strategies:

If and where Derivative strategies are used under the Scheme, the Fund Manager will employ a combination of the following strategies:

1. Index Arbitrage:

As the Index derives its value from underlying stocks, the underlying stocks can be used to create a synthetic index matching the Index levels. Also, theoretically, the fair value of a stock/ index futures is equal to the spot price plus the cost of carry i.e. the interest rate prevailing for an equivalent credit risk.

Theoretically, therefore, the pricing of Index futures should be equal to the pricing of the synthetic index created by futures on the underlying stocks. However, due to market imperfections, the index futures may not exactly correspond to the synthetic index futures.

The Index futures normally trades at a discount to the synthetic Index due to large volumes of stock hedging being done using the Index futures giving rise to arbitrage opportunities.

The fund manager shall aim to capture such arbitrage opportunities by taking long positions in the Index futures and short positions in the synthetic index. The strategy is attractive if this price differential (post all costs) is higher than the investor's cost-of-capital.

Objective of the Strategy

The objective of the strategy is to lock-in the arbitrage gains.

Risks Associated with this Strategy

- Lack of opportunity available in the market
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices
- **Execution Risk:** The prices which are seen on the screen need not be the same at which execution will take place.

2. Cash Futures Arbitrage: (Only one way as the schemes are not allowed to short in the cash market).

The Scheme would look for market opportunities between the spot and the futures market. The cash futures arbitrage strategy can be employed when the price of the futures exceeds the price of the underlying stock.

The Scheme will first buy the stocks in cash market and then sell in the futures market to lock the spread known as arbitrage return.

Buying the stock in cash market and selling the futures results into a hedge where the Scheme has locked in a spread and is not affected by the price movement of cash market and futures market. The arbitrage position can be continued till expiry of the future contracts. The future contracts are settled based on the last half an hour's weighted average trade of the cash market. Thus, there is a convergence between the cash market and the futures market on expiry. This convergence helps the Scheme to generate the arbitrage return locked in earlier. However, the position could even be closed earlier in case the price differential is realized before expiry or better

opportunities are available in other stocks. The strategy is attractive if this price differential (post all costs) is higher than the investor's cost-of-capital.

Objective of the Strategy

The objective of the strategy is to lock-in the arbitrage gains.

Risk Associated with this Strategy

- Lack of opportunity available in the market.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place

3. Hedging and alpha strategy: The Scheme will use exchange-traded derivatives to hedge the equity portfolio. The hedging could be either partial or complete depending upon the fund managers' perception of the markets. The fund manager shall either use index futures and options or stock futures and options to hedge the stocks in the portfolio. The Scheme will seek to generate alpha by superior stock selection and removing market risks by selling appropriate index. For example, one can seek to generate positive alpha by buying an IT stock and selling IT Index future or a bank stock and selling Bank Index futures or buying a stock and selling the Index.

Objective of the Strategy

The objective of the strategy is to generate alpha by superior stock selection and removing market risks by hedging with appropriate index.

Risk Associated with this Strategy

1. The stock selection under this strategy may under-perform the market and generate a negative alpha.
2. The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
3. Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place.

4. Other Derivative Strategies: As allowed under the Regulations on derivatives, the fund manager will employ various other stock and index derivative strategies by buying or selling stock/index futures and/or options.

Objective of the Strategy

The objective of the strategy is to earn low volatility consistent returns.

Risk Associated with this Strategy

- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices
- Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place.

Illustrations of some derivative transactions

i) Index Futures:

Benefits

a) Investment in Stock Index Futures can give exposure to the index without directly buying the individual stocks. Appreciation in Index stocks can be effectively captured through investment in Stock Index Futures.

b) The Scheme can sell futures to hedge against market movements effectively without actually selling the stocks it holds.

The Stock Index futures are instruments designed to give exposure to the equity market indices. BSE Limited and National Stock Exchange of India Limited have started trading in index futures of 1, 2 and 3-month maturities. The pricing of an index future is the function of the underlying index and interest rates.

Illustration

Spot Index: 1070

1 month Index Future Price on day 1: 1075

Fund buys 100 lots

Each lot has a nominal value equivalent to 200 units of the underlying index

Let us say that on the date of settlement, the future price = Closing spot price = 1085

Profits for the Scheme = $(1085 - 1075) * 100 \text{ lots} * 200 = \text{Rs } 200,000$

Please note that the above example is given for illustration purposes only.

The net impact for the Scheme will be in terms of the difference between the closing price of the index and cost price (ignoring margins for the sake of simplicity). Thus, it is clear from the example that the profit or loss for the Fund will be the difference of the closing price (which can be higher or lower than the purchase price) and the purchase price. The risks associated with index futures are similar to the one with equity investments. Additional risks could be on account of illiquidity and hence mispricing of the future at the time of purchase.

ii) Buying Options:

Benefits of buying a call option:

Buying a call option on a stock or index gives the owner the right, but not the obligation, to buy the underlying stock / index at the designated strike price. Here the downside risks are limited to the premium paid to purchase the option.

Illustration

For example, if the scheme buys a one month call option on ABC Limited at a strike of Rs. 150, the current market price being say Rs.151. The scheme will have to pay a premium of say Rs. 15 to buy this call. If the stock price goes below Rs. 150 during the tenure of the call, the scheme avoids the loss it would have incurred had it straightaway bought the stock instead of the call option. The scheme gives up the premium of Rs. 15 that has to be paid in order to protect the scheme from this probable downside. If the stock goes above Rs. 150, it can exercise its right and own ABC Limited at a cost price of Rs. 150, thereby participating in the upside of the stock.

Benefits of buying a put option

Buying a put option on a stock originally held by the buyer gives him/her the right, but not the obligation, to sell the underlying stock at the designated strike price. Here the downside risks are limited to the premium paid to purchase the option.

Illustration

For example, if the scheme owns ABC Limited and also buys a three month put option on ABC Limited at a strike of Rs. 150, the current market price being say Rs.151. The scheme will have to pay a premium of say Rs. 12 to buy this put. If the stock price goes below Rs. 150 during the tenure of the put, the scheme can still exercise the put and sell the stock at Rs. 150, avoiding therefore any downside on the stock below Rs. 150. The scheme gives up the fixed premium of Rs. 12 that has to be paid in order to protect the scheme from this probable downside. If the stock goes above Rs. 150, say to Rs. 170, it will not exercise its option. The scheme will participate in the upside of the stock, since it can now sell the stock at the prevailing market price of Rs. 170.

E. WHAT ARE THE INVESTMENT STRATEGIES?

The corpus of the Scheme will be invested predominantly in stocks constituting the underlying index in the same proportion as in the Index and endeavor to track the benchmark index. A very small portion (0-5% of the Net Assets) of the Scheme may be kept liquid to meet the liquidity and expense requirements. The performance of the Scheme may not commensurate with the performance of the underlying index on any given day or over any given period. Such variations are commonly referred to as the tracking error. The Scheme intends to maintain a low tracking error by closely aligning the portfolio in line with the index. The stocks comprising the underlying index are periodically reviewed by Index Service Provider. A particular stock may be dropped or new securities may be included as a constituent of the index, subject to approval from DIPAM. In such an event, the scheme will endeavor to reallocate its portfolio but the available investment/ disinvestment opportunities may not permit precise mirroring of the underlying index immediately but not later than 7 days from the date of such event. Similarly, in the event of a constituent stock being demerged / merged / delisted from the exchange or due to a major corporate action in a constituent stock, the Scheme may have to reallocate the portfolio and seek to minimize the variation from the index.

Equities and equity related instruments:

The Scheme would invest in stocks comprising the underlying index and endeavor to track the benchmark index.

Fixed Income Securities:

The Scheme may also invest in money market instruments (with maturity not exceeding 91 days), including TREPs, cash & cash equivalents, in compliance with Regulations to meet liquidity requirements. The scheme may also invest in liquid schemes/ money market schemes of the Fund. Money Market Instruments include commercial papers, commercial bills, treasury bills, and Government securities having maturity upto 91 days, call or notice money, certificate of deposit, usance bills, TREPs and any other like instruments as specified by the Reserve Bank of India from time to time.

Implementation of Policies

The Scheme, in general, will hold all of the securities that comprise the Underlying Index in the same proportion as the index. Expectation is that, over time, the tracking error of the Scheme relative to the performance of the Underlying Index will be relatively low.

The Investment Manager would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Underlying Index.

Investment Process

The Scheme will track the Underlying Index and is a passively managed scheme. The investment Decisions will be determined as per the Underlying Index. In case of any change in the index due to corporate actions or change in the constituents of the Underlying Index (as communicated by the Index Service Provider), relevant investment decisions will be determined considering the composition of the Underlying Index.

The Investment decision of the Scheme will be carried out by the designated Fund Manager.

Portfolio Turnover

Portfolio turnover is defined as the lower of purchases and sales divided by the average assets under management of the respective Scheme during a specified period of time.

Generally, portfolio turnover of the Scheme will be confined to rebalancing of portfolio on account of change in the composition and corporate actions of the Underlying Index.

Tracking Error

The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal circumstances, the AMC will endeavour that the tracking error of the Scheme does not exceed 2% per annum. However, this may vary due to various reasons mentioned below or any other reasons that may arise and particularly when the markets are very volatile.

For more details on Tracking Error, kindly refer 'Tracking Error Risk' under Scheme Specific Risk Factors.

PROCEDURE FOR CREATION OF UNITS

Issue of Units

1. Each unit of the Scheme will be approximately equal to 1/100th of the Underlying Index closing on the date of FFO 2 allotment. The units being offered will be issued at a premium approximately equal to the difference between face value and FFO 2 allotment price.
2. As the Scheme is listed on BSE/NSE, subsequent buying or selling by investors can be made from the secondary market on BSE/NSE. The minimum number of units that can be bought or sold is 1 (one) unit.
3. Authorised Participant(s)/ Investor(s) can directly buy / sell in blocks from the Fund in 'Creation Unit' Size.

Creation of Units:

'Creation Unit' is a fixed number of Units of the Scheme, which is exchanged for a predefined basket of shares underlying the index called the "Portfolio Deposit" and a "Cash Component". The facility of creating / redeeming units in Creation Unit size is available to the Authorised Participant and Investors.

The number of units, that investors can create / redeem in exchange of the Portfolio Deposit and Cash Component, is Units and in multiples thereof. The Portfolio Deposit and Cash Component are defined as follows:-

- a. **Portfolio Deposit:** This is a pre-defined basket of securities that represent the Underlying Index. Portfolio Deposit can change from time to time.
- b. **Cash Component for subscription/ redemption in Creation Unit:** The Cash Component represents the difference between the applicable net asset value of a Creation Unit and the market value of the Portfolio Deposit. This difference may include accrued dividends, accrued annual charges including management fees and residual cash in the Scheme. In addition, the Cash Component may include transaction cost as charged by the Custodian/Depository Participant, equalization of dividend, effect of rounding-off of number of shares in Portfolio Deposit and other incidental expenses for Creating Units. The Cash Component will vary from time to time and will be computed and announced by the AMC on its website every Business Day.

In addition, Investors shall also pay charges payable to depositories / exchanges for creation / redemption of units as part of Cash Component.

As on June 30, 2019, the Scheme complies with the portfolio concentration norms specified by SEBI vide circular dated January 10, 2019:

1. The index shall have a minimum of 10 stocks as its constituents.
2. For a sectoral/ thematic Index, no single stock shall have more than 35% weight in the index. For other than sectoral/ thematic indices, no single stock shall have more than 25% weight in the index.
3. The weightage of the top three constituents of the index, cumulatively shall not be more than 65% of the Index.
4. The individual constituent of the index shall have a trading frequency greater than or equal to 80% and an average impact cost of 1% or less over previous six months.

Procedure followed for Investment decisions

POSITION OF EQUITY MARKET IN INDIA

The Indian stock market is one of the world's largest stock markets on the basis of investor base and has a collective pool of about 27 million investor accounts.

There are two leading stock exchanges in India, i.e. BSE Limited (BSE) and National Stock Exchange of India Limited (NSE). BSE was established in 1875 and is the oldest stock exchange in Asia. NSE, a more recent establishment which came into existence in 1992, is the largest and most advanced stock market in India and is also one of the biggest stock exchanges in Asia in terms of transactions. NSE's flagship index, NIFTY 50, is used extensively by investors in India and around the world to take exposure to the Indian equities market.

BSE has a large number of scrips which are listed. The Indian stock market scene really picked up after the opening up of the economy in the early nineties. NSE changed the way the Indian markets function, in the early nineties, by replacing floor based trading with nationwide screen based electronic trading, which took trading to the doorstep of the investor. NSE was mainly set up to bring in transparency in the markets. Instead of trading membership being confined to a group of brokers, NSE ensured that anyone who was qualified, experienced and met minimum financial requirements was allowed to trade. The price information which could earlier be accessed only by a handful of people could now be seen by a client in a remote location with the same ease. The paper based settlement was replaced by electronic depository based accounts and settlement of trades was always done on time. One of the most critical changes was that a robust risk management system was set in place, so that settlement guarantees could protect investors against broker defaults. The corporate governance rules were gradually put in place which initiated the process of bringing the listed companies at a uniform level.

POSITION OF DEBT MARKET IN INDIA

Indian debt markets, in the early nineties, were characterised by controls on pricing of assets, segmentation of markets and barriers to entry, low levels of liquidity, limited number of players, near lack of transparency, and high transactions cost. Financial reforms have significantly changed the Indian debt markets for the better. Most debt instruments are now priced freely on the markets; trading mechanisms have been altered to provide for higher levels of transparency, higher liquidity, and lower transactions costs; new participants have entered the markets, broad basing the types of players in the markets; methods of security issuance, and innovation in the structure of instruments have taken place; and there has been a significant improvement in the dissemination of market information. There are three main segments in the debt markets in India, viz., Government Securities, Public Sector Units (PSU) bonds, and corporate securities. A bulk of the debt market consists of Government Securities. Other instruments available currently include Corporate Debentures, Bonds issued by Financial Institutions, Commercial Paper, Certificates of Deposits and Securitized Debt. Securities in the Debt market typically vary based on their tenure and rating. Government Securities have tenures from one year to thirty years whereas the maturity period of the Corporate Debt now goes upto sixty years and more (perpetual). Perpetual bonds are now issued by banks as well. Securities may be both listed and unlisted and there is increasing trend of securities of maturities of over one year being listed by issuers. While in the corporate bond market, deals are conducted over telephone and are entered on principal-to-principal basis, due to the introduction of the Reserve Bank of India's NDS-Order Matching system a significant proportion of the government securities market is trading on the new system.

The yields and liquidity on various securities as on August 30, 2019 are as under:

B. ONGOING OFFER DETAILS

Ongoing Offer Period <i>(This is the date from which the scheme will reopen for Subscription / Redemption after the closure of the FFO 2 Period)</i>	The Scheme will re-open for continuous Sale and Repurchase within 5 business days from the date of allotment. The units of the Scheme are proposed to be listed on the BSE and NSE. All investors, including Authorised Participant(s) may sell their units in the stock exchange(s) on which these units are listed on all the Trading Days of the stock exchanges. The Fund will repurchase units from Authorised Participant(s) and Investors on any Business Day provided the value of units offered for repurchase is not less than Creation Unit Size. The redemption consideration shall normally be the basket of securities represented by the Underlying Index in the same weightage as in the Index or the equivalent value of basket in cash and the Cash Component. Investors, other than Authorised Participants, can sell units in less than Creation Unit Size of the Scheme directly to the Fund, without any exit load in the certain cases. Please refer to 'load structure' section for more details. The AMC will not extend credit facility to the Authorized Participants/ investors. Authorized participants or investors will get the NAV as and when they bring the Portfolio Deposit/ equivalent amount of cash and Cash Component.
Ongoing price for subscription/redemption by investors This is the price you need to pay for purchase / This is the price you will receive for redemptions	This is the price you need to pay for purchase: The purchase price of the Units will be based on the Applicable NAV. Purchase Price = Applicable NAV Example: An investor invests Rs 20,000/- and the current NAV is Rs. 20/- then the purchase price will be Rs. 20/- and the investor receives $20000/20 = 1000$ units. This is the price you will receive for redemptions: Redemption Price = Applicable NAV (for respective plan and option of the scheme) * (1 - Exit Load as applicable to the investor) Applicable exit load shall be subject to the tenure of investment of the investor in the scheme vis-à-vis the exit load structure applicable when investor had invested in the scheme. Example: An investor invests on April 1, 2017 when

	the applicable exit load for the scheme was 2% if redeemed within 1 year, else nil. Scenario 1) In case investor redeems before April 1, 2018, then applicable exit load would be 2%. Now suppose the same investor decides to redeem his 1000 units. The prevailing NAV is ₹ 25/-. Hence, the sale or redemption price per unit becomes ₹ 24.50/- i.e. $25 \times (1 - 2\%)$. The investor therefore gets $1000 \times 24.50 = ₹ 24,500/-$. Scenario 2) In case investor redeems on or after April 1, 2018, then applicable exit load would be nil. Now suppose the same investor decides to redeem his 1000 units. The prevailing NAV is ₹ 30/-. Hence, the sale or redemption price per unit will be ₹ 30/- i.e. $30 \times (1 - 0)$. The investor therefore gets $1000 \times 30 = ₹ 30,000/-$. The Authorized Participant(s)/ Investor(s) can subscribe/redeem the units of the Scheme directly with the Fund only in creation unit size and in multiples thereof. The subscription & redemption of units would be based on the portfolio deposit & cash component as defined by the Fund for the respective business day. The Fund may allow cash purchases/cash redemption of the units of the Scheme in Creation Unit Size by Investor(s)/Authorized Participant(s). Purchase/redemption request shall be made by such investors to the Fund whereupon the Fund shall arrange to buy/sell the underlying portfolio of securities on behalf of the investor. In case of shares bought and sold by the AMC on behalf of the investor, entire proceeds of portfolio deposit and other cost and charges related to the purchase and sale of basket of underlying securities for servicing the subscription or redemption transaction would be borne by the investor. The units would be initially listed on the BSE & NSE to provide liquidity through secondary market. It may also list on any other exchanges subsequently. All categories of Investors may purchase the units through secondary market on any trading day. The AMC will appoint Authorized Participant(s) to provide liquidity in secondary market on an ongoing basis. The Authorized Participant(s) envisage to offer daily two-way quote on exchange. The AMC will not extend credit facility to the Authorized Participants/ investors. Authorized participants or investors will get the NAV as and when they bring the Portfolio Deposit/ equivalent amount of

	cash and Cash Component. There is no exit load currently. However transaction charges payable to Custodian/ Depository Participants, and other incidental charges relating to conversion of units into basket of securities may be deducted from redemption proceeds. The charges will be notified on www.icicipruamc.com from time to time. Investors other than Authorized Participant may redeem units at the listed price plus transaction handling charges on stock exchange. For more details on Loads refer section on 'Load Structure'. The Fund shall ensure that the Redemption Price is not lower than 93% of the NAV and the Purchase Price is not higher than 107% of the NAV, provided that the difference between the Redemption Price and Purchase Price of the Units shall not exceed the permissible limit of 7% of the Purchase Price, as provided for under the Regulations.

Suspension of Sale and Redemption of Units Suspension or restriction of repurchase/ redemption facility under any scheme of the Fund shall be made applicable only after obtaining the approval from the Boards of Directors of the AMC and the Trustees. After obtaining the approval from the AMC Board and the Trustees. Additionally, the following requirements shall need to be observed before imposing restriction on redemptions: a) Restriction may be imposed when there are circumstances leading to a systemic crisis or event that severely constricts market liquidity or the efficient functioning of markets such as: i. Liquidity issues - when market at large becomes illiquid affecting almost all securities rather than any issuer specific security. ii. Market failures, exchange closures - when markets are affected by unexpected events which impact the functioning of exchanges or the regular course of transactions. Such unexpected events could also be related to political, economic, military, monetary or other

	emergencies. iii. Operational issues – when exceptional circumstances are caused by force majeure, unpredictable operational problems and technical failures (e.g. a black out). Such cases can only be considered if they are reasonably unpredictable and occur in spite of appropriate diligence of third parties, adequate and effective disaster recovery procedures and systems. b) Restriction on redemption may be imposed for a specified period of time not exceeding 10 working days in any 90 days period. c) Any imposition of restriction would require specific approval of Board of AMC and Trustees and the same should be informed to SEBI immediately. d) When restriction on redemption is imposed, the following procedure shall be applied: 1. No redemption requests up to INR 2 lakh shall be subject to such restriction. 2. Where redemption requests are above INR 2 lakh, AMCs shall redeem the first INR 2 lakh without such restriction and remaining part over and above INR 2 lakh shall be subject to such restriction. Payment of Proceeds All redemption requests received prior to the cut-off time on any Business Day at the Official Points of Acceptance of Transactions will be considered accepted on that Business Day, subject to the redemption requests being complete in all respects, and will be priced on the basis of Redemption Price for that day. Requests received after the cut-off time will be treated as though they were accepted on the next Business Day. As per the Regulations, the Fund shall dispatch redemption proceeds within 10 Business Days (working days) of receiving the redemption request. Trustees reserve the right to alter or modify the number of days taken for redemption of Units under the Fund after taking into consideration the actual settlement cycle, when announced, as also the changes in the settlement cycles that may be announced by the Principal Stock Exchanges from time to time. As per the Regulations, in the event of failure to dispatch the redemption or repurchase proceeds within 10 working days, the AMC is liable to pay interest to the Unit holders @ 15% p.a. Eligibility Criteria

The number of Loyalty Units allocated will be based only on those Units which are held continuously in the same Unit holder(s) name for the period(s) specified

	below. The eligibility criteria for calculating the Loyalty Units is as below: • The Units must have been held as per the records of Registrar in the name of the same Unit holder continuously from the Additional Offering Allotment Date to the Loyalty Unit Record Date. • For calculation of the Loyalty Units, the lowest Unit balance held by the Unit holder at any point of time in between the Additional Offering Allotment Date to the Loyalty Unit Record Date (both days included), which is at par or below the number of Units allotted to the Unit holder on the Allotment Date will be considered for determining the Loyalty Units. Eligible Unit holders who sell/transfer all or part of the Units allotted to them pursuant to the Additional Offering before the Loyalty Unit Record Date shall not be entitled to receive the Loyalty Units in respect of such Units which have been sold/transferred before the Loyalty Unit Record Date. Transfer of Units will not, however, result in loss of entitlement under this Section, if the transfer is “off market”, and only in the scenarios given below provided the relevant transfer form is accompanied by relevant supporting documents as required by the AMC / Registrar, to satisfy the Registrar that: • The transfer is initiated due to death of the Unit holder and the Units are entitled to be transferred in the name of Nominee or legal heir as per prevailing laws or as per the Unit holders Will, subject to the individual(s) not being prohibited to invest in this Scheme as per any regulator. • The Units are being transferred from the names of joint Unit holders into the sole name of the first holder, without the addition of any other person as a joint Unit holder. Please note that all the necessary documents validating the above stated reason for the “off market” transfer of Units should be submitted to the AMC/Registrar by the new entitled Unit holder at least 30 days prior to Loyalty Unit Record Date for determining the Unit holder who is eligible to receive Loyalty Units.

Matter in this regard is under adjudication.
 - 2.5 RBI has vide its order dated February 25, 2019, imposed a monetary penalty of ₹ 10 million on ICICI Bank for non-compliance with guidelines/directions issued by RBI on Time-bound implementation & strengthening of SWIFT related operational controls. This penalty has been imposed in exercise of powers vested in RBI under section 47(A)(1)(c) read with Section 46(4)(i) of the Banking Regulation Act, 1949.
 - 2.6 The Overseas Branch of the Bank in Singapore had inadvertently claimed certain tax deductions from AY2013 to AY2015. This was self-identified by the branch in June 2016 and voluntary disclosure of the same was made along with revised tax computation for relevant Assessment Years. Owing to the above, Inland Revenue Authority of Singapore (IRAS) has levied a penalty of SGD 1,500 on the branch.
- 3. Details of all enforcement actions taken by SEBI in the last three years and/ or pending with SEBI for the violation of SEBI Act, 1992 and Rules and Regulations framed there under including debarment and/ or suspension and/ or cancellation and/**

or imposition of monetary penalty/adjudication/enquiry proceedings, if any, to which the Sponsor(s) and/ or the AMC and/ or the Board of Trustees /Trustee Company and/ or any of the directors and/ or key personnel (especially the fund managers) of the AMC and Trustee Company were/ are a party. The details of the violation shall also be disclosed.

- 3.1 In connection with certain investments made by few schemes of ICICI Prudential Mutual Fund, the AMC has ensured compliance with the directions issued by SEBI. Further, in the same matter, quasi-judicial proceedings have been initiated by SEBI. The AMC had filed an application with SEBI for settling the adjudication proceedings, without admission or denial of findings. In this matter, the AMC has paid the full settlement amount to SEBI. In light of the above, SEBI vide its settlement order dated November 29, 2018 has disposed off the pending proceedings against the AMC.
- 3.2 Basis certain alleged violations observed during the inspection of ICICI Prudential Mutual Fund under SEBI (Mutual Funds) Regulations, 1996, for the period from April 01, 2014 to March 31, 2016, quasi-judicial proceedings have been initiated by SEBI, with respect to following matters:
- a. Investment by schemes as per the investment objective;
 - b. Rebalancing of scheme portfolio in case of downgrade of securities; and
 - c. Determination of quantum of dividend and fixing of record date for declaration of dividend.

In reference to the above, the AMC and ICICI Prudential Trust Limited (the Trustee Company) have received a show cause notice on August 28, 2018. In response to the above, the AMC and the Trustee Company have taken suitable action.

- 4. Any pending material civil or criminal litigation incidental to the business of the Mutual Fund to which the Sponsor(s) and/ or the AMC and/ or the Board of Trustees /Trustee Company and/ or any of the directors and/ or key personnel are a party should also be disclosed separately.**

- 4.1 As per the SEBI (Mutual Funds) Regulations, 1996, mutual fund schemes are permitted to invest in securitised debt. Accordingly, few schemes of ICICI Prudential Mutual Fund ("the Fund") had made investment in Pass Through Certificates (PTCs) of certain special purpose vehicles / securitisation trusts ("the Trusts"). The returns filed by few of these securitisation Trusts whose PTCs were held by the Fund were taken up for scrutiny by the Income Tax Authorities for Assessment Years 2007-08, 2008-09, 2009-10 and 2010-11. Arising out of this, the Income Tax Authorities had raised a demand on such Trusts. On failure to recover the same from the Trusts, Income Tax Authorities sent demand notices to the Fund along with other Mutual Funds as beneficiaries / contributors to such Trusts. The Fund in consultation with its tax & legal advisors has contested the applicability of such demand and got the attachment order vacated by Hon'ble High Court of Bombay. The Trusts on their part had contested the matter and the Income Tax Appellate Tribunal upheld their appeal and dismissed the contentions and all the cross-appeals filed by the Tax Authorities. The Tax Authorities have now filed an appeal with Hon'ble High Court on the matter.

5. Any deficiency in the systems and operations of the Sponsor(s) and/ or the AMC and/ or the Board of Trustees/Trustee Company which SEBI has specifically advised to be disclosed in the SID, or which has been notified by any other regulatory agency, shall be disclosed. –
