Circular Ref. No: 02/2024	

All Participants,

Implementation of TLS 1.2 (only with strong ciphers) and TLS 1.3

TLS (Transport Layer Security) is the protocol which secures HTTPS. TLS provides secure communication between web browsers and servers.

To enhance the security of data and communications, it has been decided to permit TLS 1.2 (only with strong ciphers) and TLS 1.3 protocols.

With this background and considering the implications, all members are requested to implement one of the following:

1. Upgrade the browsers to the latest versions.
 - a. Google's Chrome - <https://www.google.com/chrome/>
 - b. Mozilla's Firefox - <https://www.mozilla.org/en-US/firefox/new/>
 - c. Microsoft's Edge – <https://www.microsoft.com/enin/edge/download?form=MA13FJ>
2. For members connecting to the application using any other variant of clients (like for making API call), members are requested to check and make necessary changes at their end so that client supports connections over TLS 1.2 (only with strong cipher) and/or TLS 1.3.

All Market Participants are requested to know that eIPO platform (<https://www.eipouat.com/eipo/bidux/login.jsp>) would only support communication over TLS 1.2 (only with strong cipher) and/or TLS 1.3 with effect from **March 15, 2024**.

The necessary changes are made in UAT setup to test the compatibility of your systems/applications to support strong cipher suits for eIPO API applications.
