**1. Summary of the primary business**

We are a technology platform, built on proprietary digital technology and pan-India digital connectivity as the foundational layer driving digital transformation in India. Since our inception, we have played a pivotal role in democratising access to digital connectivity and digital services in India. Jio Platforms' digital connectivity forms one of the fundamental pillars of India's growing digital economy which is expected to reach \$1.4 trillion (₹125.8 trillion) by Fiscal 2031, as per the Analysys Mason Report. Our Subsidiary, Reliance Jio Infocomm Limited ("RJIL") served 533.3 million customers in India<sup>1</sup> as of June 30, 2026. A combination of mobile, fixed broadband and digital services across a unified platform, together with data and customer personalisation, positions us as a comprehensive digital gateway through which a significant proportion of Indian customers are able to access the internet, digital services and emerging technologies, including artificial intelligence ("AI").

**Our Technology Platform**

In modern software-driven network architecture, the traditional distinction between 'telecom' and 'technology' no longer applies. Our position is more grounded in technology, given that we have designed, built, and deployed our entire network and services stack primarily using proprietary technology, from radio access network to core capabilities, from operating systems to digital applications. Technology is the fundamental architecture of how our business is structured, built, and operated.

## **2. Summary of the Industry (Source: Analysys Mason Report)**

India’s digital ecosystem has undergone significant growth in recent years, supported by rising internet penetration, data consumption and the broadening adoption of digital services across consumers and enterprises. Today, India is one of the fastest adopters of 5G globally, with ~43% of mobile broadband customers transitioning within less than 4 years as of March 31, 2026. India’s fixed broadband market has transformed in recent years – from a period of slow, uneven growth to one of rapid acceleration. However, India continues to lag behind both developing and developed markets on fixed broadband penetration, implying significant room for future growth. There is also significant disparity between fixed broadband penetration in urban and rural areas in India. As digital connectivity providers overcome these barriers around limited network availability through next-generation technologies like FWA on 5G and UBR<sup>9</sup>, the market has the potential to move quickly to unlock the latent demand for reliable, high-speed digital connectivity.
