Dear Sir/Madam,

Sub: Newspaper Publication of Unaudited Financial Results

Ref: Regulation 30 and Regulation 47 of SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 ('Listing Regulations')

In terms of Regulation 47 of the Listing Regulations, the Standalone and Consolidated Unaudited Financial Results for the quarter and half year ended September 30, 2026, have been published in the following newspapers:

1. Financial Express (in English) on Friday, October 30, 2026;
2. Loksatta – Jansatta (in Gujarati) on Friday, October 30, 2026.

A copy of the Newspaper publications is enclosed.

Please take the same on your records.

Thanking you,
Yours faithfully,

For AARTI PHARMALABS LIMITED

EX-SPEAKER MEIRA KUMAR TO CHAIR MOCK SESSION

'Public impeachment' of CEC by Oppn today

PRESS TRUST OF INDIA
New Delhi, October 29

FORMER LOK SABHA Speaker Meira Kumar will chair the INDIA bloc's "public impeachment" of the CEC on October 30, with Congress President Mallikarjun Kharge initiating the proceedings and former party chief Rahul Gandhi making the concluding remarks before the "motion" is adopted, sources said on Thursday.

INDIA bloc leaders met at Kharge's residence in New Delhi to give the final shape to the "public impeachment" proceedings that they intend to carry out against Chief Election Commissioner (CEC) Gyanesh Kumar at Kharge's residence as a symbolic protest over the "vote chori" issue.

Congress General Secretaries Priyanka Gandhi Vadra, Jai Ram Ramesh and KC Venugopal, senior Congress leader Meera Kumar, TMC's Derek O'Brien, Samajwadi Party's Haseena Malik, JMM's Mahua Mahi and CPI(M)'s John Brittas, among others, participated in the meeting.

Sources said Meira Kumar will chair the INDIA bloc's "public impeachment" of Gyanesh Kumar. While Kharge will move the "motion" to impeach Gyanesh Kumar, Gandhi will make the concluding remarks before the

Former Lok Sabha Speaker Meira Kumar, Congress leaders Jai Ram Ramesh, KC Venugopal and Priyanka Gandhi Vadra, TMC leader Derek O'Brien, and JMM leader Mahua Mahi at a meeting of the INDIA bloc in New Delhi on Thursday

'motion' is passed.

Speaking in Bengaluru, Kharge said the opposition's protest is continuing because of the "vote chori" and the "vote theft" carried out by the CEC. "We are protesting against that and will continue to do so. All parties are supporting us. Even tomorrow, there is mock Parliament and on November 1, we are having this rally and people from across the country are coming. We will fight. In a democracy, if you don't fight, people will not be awakened," the Congress president said.

After attending the meeting, Congress' media and publicity department head Pawan Khersa said the details of how

to proceed with the "public impeachment" of the CEC were deliberated on. "Most of the INDIA bloc leaders were present and we went through all the points on how to proceed with the public impeachment," he said.

Congress' deputy leader in the Lok Sabha Gaurav Gogoi said, "We want every important issue related to SIR and vote theft to be discussed. The pain of the people and the attack on democracy should be brought to light through discussion, and people should be encouraged that we are all united in saving democracy. A message of unity will go out tomorrow."

THE LATEST ADVISORY from CERT in should be viewed as more than another cybersecurity alert. It highlights a shift in enterprise risk that many organisations are only beginning to recognise.

For nearly two decades, companies have invested heavily in detecting cyber threats. Security tools were designed to identify suspicious users, malicious software, unauthorised access, and abnormal behavior. These controls worked because attackers typically operated outside the boundaries of legitimate business activity.

Agents change that equation: Unlike traditional attackers, AI agents are granted access by the organisation itself. They log in using legitimate credentials, access approved applications, and operate within permissions that employees have assigned to them. To most security systems, they appear indistinguishable from a trusted worker.

That is precisely the challenge: As AI adoption accelerates, the key security question is no longer simply who accessed a system, but why the access occurred and whether it aligns with the agent's intended purpose.

Today, AI agents are being

When AI looks like a trusted employee

connected to small platforms, customer databases, cloud environments, code repositories, and enterprise workflows. In the rush to unlock productivity gains, organisations often prioritise speed over precision when assigning permissions. As a result, an agent designed to summarise customer tickets may end up with visibility into an entire customer database.

The underlying weaknesses are not new. Exposed credentials, insecure APIs, excessive permissions, and weak authentication have long been recognised security issues. What has changed is the speed at which AI can exploit them.

A human attacker might spend days or weeks navigating an over-permissioned environment. An AI agent can perform the same activity in minutes, often without triggering alarms designed to detect human behavior. Security systems built

to identify intrusions are far less effective when the activity originates from a legitimate, authorised identity.

This twist in the issue extends beyond technology and into governance. In many large enterprises, machine identities already far outnumber human users. Yet most organisations cannot confidently answer three fundamental questions: How many AI agents are operating across the business? What systems can they access? And who is accountable for their actions?

These questions are becoming boardroom concerns. The first priority for security leaders is visibility. Every AI agent, whether developed internally or embedded in a third-party platform, should be treated as a distinct digital identity with a designated owner and clearly defined purpose. Access should be granted

based on business need, not convenience.

Organisations should also recognise that AI agents introduce a new challenge in insider risk management. Unlike human employees, agents do not exercise judgment, question unusual instructions, or recognise when an action may have unintended consequences. If configured incorrectly or provided with excessive access, they can rapidly propagate errors, expose sensitive information, or trigger actions across multiple systems at a scale that would be difficult for a human user to match.

Second, organisations must evolve from monitoring access to monitoring intent. Knowing that an agent read a file or queried a database is no longer sufficient. Enterprises need to understand whether those actions are consistent with the agent's assigned role. Accessing

unrelated datasets, invoking unfamiliar APIs, or attempting to execute code outside its intended function should attract scrutiny and, where necessary, require human approval.

Third, organisations should strengthen accountability across their AI ecosystem. Contracts with AI providers must clearly define incident reporting obligations, audit rights, data-handling responsibilities, and notification timelines. These provisions are increasingly important in light of regulatory expectations and emerging data protection requirements.

None of this argues for slowing AI adoption. Organisations that effectively deploy AI agents will unlock meaningful gains in productivity, efficiency, and innovation. However, autonomy without oversight creates new forms of operational and cyber risk.

The lesson from the CERT Advisory is straightforward: AI agents should be managed much like privileged employees. They must be verified, granted only the access they need, continuously monitored, and rapidly responded to.

The adoption of AI is no longer a future challenge. It is today's reality. The organisations that will not be necessarily be those that deploy the most AI, but those that establish governance, accountability, and visibility needed to deploy it safely.

SC pulls up banks & RBI on spate of digital arrests

VENKATARAMANI SAID THAT such a direction may not be necessary as it would have several implications. He pointed out that after the court's intervention, the number of registered complaints of digital arrest had come down from 1,100 to 100. He also said that the number of transactions in a fraudster's account had come down from 1,100 to 100.

social media and news reports about court cases over the scam. Senior Advocate N S Nappin, who is assisting the court, said that such frauds were still occurring. "I keep getting repeated inputs that what is alleged as the US Fed's rate pause, marginal easing in crude and renewed institutional buying improved risk appetite despite challenging external backdrop," said Vinod Rathi, head of research at Capital Investments.

"Thanks to the court's intervention, a lot of steps have been taken now. I have been trying to push the RBI to expedite the rule-making process and complete them," he said.

The RBI, he said, was in advanced stages of operationalising its "guidelines" to prevent digital arrest frauds and that these guidelines will take effect by December. "All I am saying is the guidelines are being finalised. They only need a little more time to make them operational," Venkataramani said.

The CJI took exception to the usage of the expression "guidelines" and said the RBI "when you use the word guideline, that itself denotes the description. Very poor word, very weak word... Unless

you have a sting in those guidelines... There will be zero debit from the account of the victim. The amount will remain intact. The bank will have to pay. That is the only solution!"

"We want you as a regulator to formulate a mandatory provision that in case of an unusual transaction in the account of an individual person, the bank will suspend the transaction unless a complete protocol verification is followed," the CJI said.

The bench said it was "shocked" by the fact that even educated people continued to fall prey to the fraud despite warnings on television and

the court's query on what were banks doing about stopping suspicious transactions in individual accounts, the Attorney General said there could be individual progress in this matter. "Prevention is happening at three levels - by awareness, secondly by banks at an appropriate stage, and if it goes beyond that, RBI and Mail rules are addressing this problem. We want to put everything in operation by December or so," he said.

Fed pause cheers mkt

INVESTORS' WEALTH ON RISE by ₹4.80 lakh crore to ₹477.43 lakh crore.

During the session, foreign portfolio investors (FPIs) sold shares worth ₹943.60 crore, while domestic institutional investors (DII) bought shares worth ₹1,924.41 crore, according to provisional data from the Bombay Stock Exchange. The net result was a marginal easing in crude and renewed institutional buying improved risk appetite despite challenging external backdrop," said Vinod Rathi, head of research at Capital Investments.

The broader outlook remains positive for selective earnings resilience and stable domestic demand, although elevated input costs could test the sustainability of profit margins. However, elevated Brent crude prices, rupee weakness, and persistent geopolitical uncertainty remain key risks, Nair added. "Among the key macro factors, the US Federal Reserve maintained its benchmark interest rate at 3.75%-4%, while its commentary highlighted persistent inflation concerns," said Adil Mishra, senior vice president of research at Religare Broking.

Finmin raises FY27 forecast

THE INDUSTRIAL OUTLOOK remains encouraging, backed by firm production, stronger order flows, improved manufacturing sentiment and robust industrial credit. The RBI's October assessment highlighted that "strong capacity utilisation, robust credit flows and the government's focus on infrastructure are expected to sustain investment activity."

However, uncertainty surrounding energy prices, supply chain and geopolitical developments continues to threaten manufacturing costs and investment decisions. The challenge will be to translate policy support into higher production, greater domestic value addition and stronger export competitiveness, it said.

Supply-side measures, including Khairi oner releases through the "Kanda Express" stockholding limits on sugar ledgers and cuts in basic customs duty on crude edible oils, are expected to ease pressure on food prices.

"However, downside risks persist from an intensifying El Niño event that threatens soil moisture during the upcoming Rabi sowing season, as well as demand-side pressure during the festive period," it said.

IndiGo mulls fare hikes as fuel bill...

FOREIGN EXCHANGE LOSSES declined to ₹1,333 crore from ₹2,892 crore in the year ago quarter. Excluding foreign exchange effects, IndiGo reported a loss of ₹724 crore, compared with a profit of ₹104 crore a year earlier. Walsh attributed the pressure to exceptionally high aviation turbine fuel (ATF) prices and continued geopolitical turmoil. He said the refining crack spread, or the premium of refined fuel over crude oil, had averaged around 65% this year, against a historical average of about 22%, keeping jet fuel costs elevated.

IndiGo carried 27.5 million passengers during the quarter, down 4.7% year-on-year, against 28.5 million available seats. Kilometres, declined 1% to 40.8 billion. Passenger traffic fell 3.7% to 21.8 billion revenue passenger kilometres, and the passenger load factor slipped to 80.3% from 82%. Passenger yield, however, rose 34.3% to ₹6.30, helping support revenue despite lower passenger volumes.

Walsh said September was the softest month of the quarter but remained optimistic about demand during the festive season.

Global bond yields, movements in the dollar and expectations surrounding the future interest rate trajectory will therefore remain in focus. Meanwhile, Brent crude eased marginally but continued to trade at elevated levels of around \$114-\$115 per barrel amid persistent concerns over potential supply disruptions in West Asia, Mishra added.

Echoing similar views, Ankur Paul, managing director of Equities Wealth, said Indian equity markets traded higher Thursday, supported by broad-based buying after the US Federal Reserve kept interest rates unchanged, in line with expectations. However, elevated crude oil prices continued to weigh on investor sentiment, keeping gains in check. Going forward, investors are likely to remain watchful of crude oil price movements and global cues, Paul added.

Market breadth was positive, with 2,654 stocks advancing against 1,716 declining on the BSE. All sectoral indices ended in positive territory except the auto index. Realty and the gainers, followed by FMCG, PSU banks, private banks and consumer goods.

Among Asian markets, Japan (+1.10%) and the Philippines (+0.97%) recorded the highest gains, followed by Taiwan (+0.84%), Thailand (+0.74%), South Korea (+0.74%) and Hong Kong (+0.74%).
