PRESS RELEASE | For Immediate Release | Ahmedabad, 10 June 2026

Aprameya Medtech Private Limited (Subsidiary of Aprameya Engineering Limited) Partners with Global MedTech Leader SonoScape, China through its entity Sonoscape Medical India Private Limited, for Sales and Marketing of Advanced Surgical Imaging Systems

Strategic alliance through subsidiary Aprameya Medtech covering Southern and Western India adds a high-margin medical equipment growth engine to the Company's healthcare infrastructure platform

Aprameya Engineering Limited (“Aprameya” or “the Company”), a healthcare-infrastructure company delivering turnkey solutions for ICUs, Operation Theatres, NICUs and high-value medical equipment, today announced that its 70%-owned subsidiary, **Aprameya Medtech Private Limited** (“Aprameya Medtech”), has entered into a **strategic marketing of products made by SonoScape Medical Corp., China**, through its entity Sonoscape Medical India Private Limited under which Aprameya Medtech will bring SonoScape’s advanced Minimally Invasive Surgery (MIS) portfolio to hospitals exclusively across **Southern and Western India**. The alliance transforms Aprameya from a project-led business into an integrated **Healthcare Infrastructure + Medical Equipment platform** — pairing its proven hospital build-out franchise with a premium, technology-led product line. The two companies also intend to evaluate **manufacturing these systems in India** in the future, aligned with the Government of India’s ‘Make in India’ vision.

The Technology: What These Systems Do

Minimally invasive (“keyhole”) surgery replaces large open incisions with a few tiny ports, through which the surgeon operates guided entirely by a high-definition camera system. The visualization platform is the heart of every modern operation theatre — and the single most consequential equipment purchase a surgical department makes. Patients recover faster, hospitals turn over beds quicker, and surgical volumes compound — which is why hospitals across India are racing to upgrade. SonoScape’s portfolio lets Aprameya serve every rung of this demand ladder, from value-focused full-HD systems to a flagship that competes with the world’s most advanced operating room technology:

Platform / System	Hospital Segment	What It Delivers
SV-M4K220Exp — 4K NIR 3D (Flagship)	Premium tertiary & oncology centres	Three technologies in one premium tower: ultra-sharp 4K vision, fluorescence imaging that lights up blood flow and tissue invisible to the naked eye, and 3D depth perception for faster, safer complex surgery
SV-M4K40 — 4K NIR	Advanced surgical & cancer care	4K vision with fluorescence (ICG) guidance, helping surgeons verify organ blood supply and locate tumours in real time
SV-M4K30 / SV-M4K120Exp — 4K	Mainstream multi-specialty hospitals	Ultra-HD camera platforms for the everyday laparoscopic workload — gallbladder, hernia, gynaecology, urology and more
SV-M2K30 / X-2600 — FHD	Value-conscious & tier-2/3 hospitals	Accessible full-HD systems that bring modern keyhole surgery within reach of smaller institutions
Rigid Endoscopes & Auxiliary Devices	All segments — recurring revenue	Laparoscopes, telescopes, insufflators and intraoperative ultrasound — the consumable-like layer that completes every operating room and repeats over time

The Partner: A Rare Integrated Global Player

Founded in 2002 and headquartered in Shenzhen, SonoScape Medical Corp. is a publicly listed global medical-imaging company whose products serve clinicians in **170+ countries**. Ranked among the world’s top ultrasound brands, SonoScape is one of only a handful of companies globally — alongside the

industry's largest names — that integrates ultrasound, endoscopy, surgical visualization and interventional imaging under one roof. This breadth is backed by **7 global R&D centres, 800+ R&D engineers, 1,035+ patents and ~20% of revenue reinvested into R&D**, with ISO 13485-certified manufacturing.

Strategic Rationale: A New, High-Quality Growth Engine

- **A large, structurally growing market:** industry estimates project India's minimally invasive surgical devices market to roughly double by 2033, propelled by rising surgical volumes, insurance penetration, medical tourism and hospital capex.
- **Revenue quality upgrade:** branded equipment sales — with a recurring layer of scopes, accessories and service — complement lumpy project revenue with repeatable, higher-margin income and greater customer wallet share.
- **A built-in customer base:** Aprameya already designs and builds the operation theatres and ICUs these systems go into; every turnkey project becomes a natural equipment opportunity, enabling fully integrated OR solutions few competitors can match.
- **Geographic expansion and de-risking:** the partnership territory spans Southern and Western India, directly advancing the Company's strategy of reducing dependence on any single state ecosystem.
- **Manufacturing optionality:** Aprameya Medtech's upcoming ~45,000 sq. ft. facility, expected operational by end of CFY 2026–27, positions the Company to localise production over time — improving margins, service turnaround and competitiveness in government procurement.

Partnership Scope: From Installation to Lifetime Service

The partnership goes well beyond placing equipment. Aprameya Medtech intends to build a dedicated MIS vertical encompassing **clinical demonstrations, surgeon training and application support, installation integrated with its turnkey operation-theatre projects, and comprehensive after-sales service and maintenance coverage** across the partnership territory. This full-lifecycle model deepens hospital relationships, creates annuity-like service income, and establishes the Aprameya group as a single-window partner for surgical infrastructure and technology.

Growth Outlook

With collections normalised, a strengthened balance sheet, an active bid pipeline, and now a premium surgical-technology portfolio layered onto its infrastructure franchise, Aprameya believes it is well positioned for scalable topline and bottom-line performance in CFY 2026–27 and beyond. The Company will keep investors informed of key milestones, including the operationalisation of the partnership and progress on the proposed India manufacturing programme.

About Aprameya Engineering Limited

Incorporated in September 2003 and listed on the NSE SME Emerge platform, Aprameya Engineering Limited ("Engineers for Health") delivers turnkey solutions for ICUs, NICUs, PICUs, Modular Operation Theatres, dialysis centres, EP labs, medical gas pipeline systems, prefabricated wards and related medical equipment, along with hospital design, MEP, structural and interior services. The Company works alongside global OEMs including Dräger, Stryker, Johnson & Johnson, Schiller and Philips Respironics, and serves leading government and institutional healthcare establishments across India. Through its 70%-owned subsidiary, Aprameya Medtech Private Limited, the Company is building a scalable, diversified medtech platform. For more information, visit www.aelhealth.com.
