Subject: Intimation of Press Release – ***"Bench Mark Infotech Services Plans Expansion into GPU-as-a-Service and Cloud Infrastructure"***

Dear Sir/Madam,

Pursuant to Regulation 30 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, we wish to inform you that Bench Mark Infotech Services Limited has issued a press release dated November 13, 2026, titled "Bench Mark Infotech Services Plans Expansion into GPU-as-a-Service and Cloud Infrastructure."

The press release outlines the Company's proposed expansion into GPU-as-a-Service (GPUaaS) and cloud infrastructure services, including a proposed investment of approximately ₹100 crore in GPU computing to be rolled out in phases. The proposed investment and expansion remain subject to the required approvals, funding arrangements, commercial evaluation, market conditions and other considerations described in the enclosed press release.

A copy of the press release is enclosed herewith for your information and dissemination to the stakeholders. We request you to kindly take the same on record.

Thanking you,

For Bench Mark Infotech Services Limited

Bench Mark Infotech Services Plans Expansion into GPU-as-a-Service and Cloud Infrastructure

Company proposes an investment of about ₹100 Crore in GPU computing, to be rolled out in phases

Kolkata, November 13, 2026 – Bench Mark Infotech Services Limited (NSE: BMISL), an integrated IT and digital infrastructure solutions company listed on the NSE EMERGE platform, has set out a proposed plan to expand into GPU-as-a-Solution & Service (GPUaaS) and cloud infrastructure services. The Company's business today is built largely on engineering, procurement, installation and systems integration of IT infrastructure. The new plan would add a business that offers computing capacity to customers as an ongoing service.

To support this, the Company proposes to invest around ₹100 Crore in GPU computing in the near future. The investment will be made in phases and remains subject to the required approvals, funding arrangements, commercial evaluation and market conditions.

Building on the Company's AI Infrastructure Experience

Over the years, the Company has designed, supplied, integrated and commissioned digital infrastructure for its customers, including AI laboratories, data centre systems, storage and networking solutions. It now plans to put this experience to work in a different way: instead of only delivering projects, it aims to own, manage and offer computing capacity that customers can use on an ongoing basis. The Company will continue to serve its existing IT infrastructure and systems integration customers alongside the new business.

Two Ways of Offering GPU Capacity

The plan rests on two models that are meant to work together:

1. **Company-owned GPU cloud:** The Company proposes to buy and deploy its own GPU-based computing infrastructure. Enterprises, AI developers, research organisations and other customers could use this capacity on a pay-per-use basis, take dedicated capacity, or contract for it. The capacity is meant for AI model training, fine-tuning, inference and other compute-heavy workloads.
2. **Third-party GPU rental platform:** The Company also plans to build a platform where independent owners and operators of GPU servers and compatible infrastructure can offer their spare capacity to users. Subject to onboarding criteria and commercial terms with each provider, the platform would help users find, set up, pay for and get support on this capacity. This would let the Company build a marketplace and managed services channel without having to own every server on it.

A Phased Rollout

Together, the two models would give the Company rental income from its own computing assets, along with platform and infrastructure management income from third-party capacity. Investment and rollout decisions will be tied to demand, procurement costs, infrastructure readiness, customer needs and risk management. The timing, asset mix, final investment amount and commercial results may change as the plan develops.

Mr. Vineet Kumar Gupta, Chairman & Managing Director, Bench Mark Infotech Services Limited, said, *"More and more businesses, developers and researchers need GPU computing for their AI work. Over the years we have built AI labs, data centre systems and networks for our customers, and offering computing capacity as a service is a natural next step from that work. We will take this forward in phases, with each step matched to customer demand and the approvals in place, and we will keep serving our existing infrastructure customers as we grow."*

About Bench Mark Infotech Services Limited:

Bench Mark Infotech Services Limited is an integrated IT and digital infrastructure solutions company with over 19 years of experience in providing technology infrastructure solutions to government departments, public sector undertakings, institutional customers and private sector clients across India. Its offerings include LAN & WAN, wireless communication systems, structured cabling, multimedia and audio-visual systems, smart classrooms, access control, safety and security surveillance, cybersecurity, data storage and data centre solutions, and fibre optic infrastructure. The Company is empanelled with BSNL as a National Level System Integrator and with RailTel Corporation of India Limited as a Business Partner, and holds ISO 9001:2015 and ISO/IEC 27001:2022 certifications. Headquartered in Kolkata, the Company also has a branch office in Patna.
