Kody Technolab Enters the United States with First Commercial Order for Odigo AI Robots

Kody Technolab Limited (NSE: KODYTECH) today announced its first commercial order in the United States, comprising 10 units of Odigo, the Company's AI robot assistant for retail and high-traffic commercial spaces.

The United States is the world's largest market for both retail and advertising, and the Company had identified entry into this market as a key priority for FY 2026–27. That entry has now been made ahead of the Company's internal timeline, and on commercial rather than trial terms.

This distinction is significant. The order is neither a pilot nor a demonstration placement. It is a paid commercial order from a US customer, which means Odigo has been evaluated against the requirements of American retail and purchased on its merits.

Odigo navigates the store floor autonomously, answers shopper queries through multilingual voice and touch assistance, helps visitors locate products and escorts them to their destination. While in motion, its displays carry promotions and brand campaigns, turning the shop floor into a measurable media channel. Every interaction also gives retailers insight into what shoppers are looking for and how they move through the store.

It is this combination that sets Odigo apart in the US market: a single machine that assists shoppers, carries paid advertising and reports on in-store behaviour.

The Company has consistently stated that it would enter the United States in a phased and disciplined manner, with products already proven in live commercial environments. Odigo currently operates across malls and hypermarkets in India and the UAE, including an at-scale in-store advertising network with one of the Gulf's largest retailers. The Company therefore enters the US with a working model and operating data behind it, rather than a concept.

Commenting on the development, Mr. Manav Patel, Chairman & Managing Director, Kody Technolab Limited, said: “**We said we would enter the United States in a disciplined, phased manner, with products that have already proven themselves in the real world. This first commercial order marks that entry, and it has come earlier than we had planned. Ten robots is where this begins, not where it ends. We now have a customer, a reference and a presence in the world’s largest retail market, and we intend to build on all three.**”

The Company will showcase Odigo at NRF 2027: Retail’s Big Show in New York in January 2027, one of the world’s largest retail industry events, and continues to build its channel-partner network across the United States.
