PRESS RELEASE

Delta Autocorp Limited (“Deltic”) announces the introduction of “Deltic Express,” a 6-seater passenger electric vehicle in the (L5) category, representing a clear progression in commercial electric mobility.

Deltic’s 4-seater (L3) passenger vehicles have seen strong adoption, contributing to category creation and enabling livelihoods at scale across Bharat. As usage increased, consistent market feedback highlighted two practical constraints in daily operations: limited passenger space and restricted speed, both affecting trip efficiency and daily earning potential.

Deltic Express has been developed as a direct response to these insights. The move to a 6-seater passenger configuration with higher speed capability and a more stable vehicle layout allows better passenger accommodation, smoother movement, and improved trip efficiency. The result is a vehicle more aligned with real-world commercial needs.

The product introduces practical, user-focused improvements. Integrated hand support across passenger rows provides better stability during transit and enhances dignity and comfort for passengers, especially women. Improved seat cushioning supports longer rides, while the cabin layout allows easier entry, exit, and passenger distribution.

Key design and usability enhancements include a metal front shield replacing the traditional butterfly fascia for added strength and presence, along with a hinged movable backrest that enables partial opening for easy loading of luggage and small goods. The vehicle’s reinforced chassis and suspension have been tuned to handle higher passenger load while maintaining improved ride comfort, and the insulated roof lining helps reduce cabin heat during peak summer conditions.

From a vehicle layout standpoint, the platform has been designed for better balance, improved load distribution, and stable ride behavior under full passenger conditions, supporting consistent performance across daily routes and continuous usage. The shift from a 4-seater to a 6-seater passenger configuration enables up to 50% higher earning potential per trip for operators, directly improving daily income viability, this reflects a fundamental shift in commercial EV product strategy.

In addition, the product is supported by easy retail financing options with accessible EMI structures, ensuring wider affordability for operators. Despite its enhanced capacity and features, Deltic Express remains cost-effective, positioned approximately 30-35% lower than traditional auto models, improving overall ownership economics.

Deltic Express reflects a clear product shift, from space-constrained formats to higher-capacity, better-balanced vehicles shaped by real usage patterns and operator needs.

The “Express” positioning reflects a more organized, reliable, and continuous passenger movement experience, supported through thoughtful seating, comfort, and in-vehicle usability features.
