HCL Technologies Introduces AI-Powered Testing Automation Platform for Communication Service Providers

Noida, India – Aug 20, 2018 – [HCL Technologies](#) (HCL), a leading global technology company, today announced the launch of HCL TURBO, an artificial intelligence (AI)-based, end-to-end testing automation platform, aimed at communication service providers. HCL TURBO integrates with existing testing tools and equipment, and delivers intelligent test planning in which Internet bots utilize AI and analytics to plan test scenarios and provide automatic test orchestration.

"The emergence of virtualized and software-defined networks has significantly complicated network testing and fragmented accountability," said **GH Rao, President of Engineering and R&D Services, HCL Technologies**. "HCL is directly addressing this shift by introducing an AI-based test lifecycle automation platform that seamlessly integrates into existing testing environments. HCL TURBO automates all phases of the test lifecycle from planning and execution to reporting, and works seamlessly across networks, devices, and application testing. It can be deployed in the cloud, on-premise, or in hybrid environments." HCL's GH Rao continued, "In a beta customer deployment, a leading service provider reduced operational expenditures by 30 percent by re-using and integrating with their existing test infrastructure."

"As service providers invest in new technologies as part of their digital transformation, they are increasingly looking for testing solutions that help minimize the risk associated with deploying new technology, **Said Curtis Price, Vice President, Infrastructure Services, IDC**. "HCL TURBO utilizes AI, analytics, and automation to offer significant advances over traditional testing solutions. TURBO provides a comprehensive end-to-end network testing solution for networks, devices, and applications that allows service providers to reduce technology risk, reduce operational expenditures, and accelerate time-to-market for new service launches."

HCL TURBO is entering the market at a time when product testing, previously handled by device manufacturers, is now the responsibility of service providers. For instance, with the recent introduction of software-defined networks and network functions virtualization, service providers are responsible for testing whenever there is a software update.

About HCL Technologies:

HCL Technologies (HCL) is a leading global technology company that helps global enterprises re-imagine and transform their businesses through Digital technology transformation. HCL operates out of 41 countries and has consolidated revenues of US\$ 8.0 billion, for 12 Months ended 30th June, 2018. HCL focuses on providing an integrated portfolio of services underlined by its Mode 1–2–3 growth strategy. Mode 1 encompasses the core services in the areas of Applications, Infrastructure, BPO and Engineering & R&D services, leveraging DRYICE™ Autonomics to transform clients' business and IT landscape, making them 'lean' and 'agile'. Mode 2 focuses on experience-centric and outcome-oriented integrated offerings of Digital & Analytics, IoT WoRKS™, Cloud Native Services and Cybersecurity & GRC services to drive

business outcomes and enable enterprise digitalization. Mode 3 strategy is ecosystem-driven, creating innovative IP-partnerships to build products and platforms business. HCL leverages its global network of integrated co-innovation labs and global delivery capabilities to provide holistic multi-service delivery in key industry verticals including Financial Services, Manufacturing, Telecommunications, Media, Publishing, Entertainment, Retail & CPG, Life Sciences & Healthcare, Oil & Gas, Energy & Utilities, Travel, Transportation & Logistics and Government.
