Press release

InfoBeans Achieves Select Partner Tier in the Claude Partner Network Services Track

The listed engineering company, which already earns 43% of its revenue from AI-led engineering, is focused on engineering the agentic enterprise: agents that run inside enterprise systems with the reliability, governance and cost discipline to stay there.

INDORE, India, October 21, 2026 - InfoBeans Technologies Ltd. (NSE: INFOBEAN; BSE: 543644), an AI-first engineering company, today announced that InfoBeans has achieved the Select Partner tier in the Claude Partner Network Services Track.

The Claude Partner Network is how Anthropic works with the firms that put Claude into production for customers. The Services Track recognizes partners for building a certified delivery team, delivering Claude use cases for clients, and proving the work through public customer references. Partners advance through Certified, Select, Preferred, and Global Premier tiers.

Enterprise AI has moved on. Agents now do real work inside enterprise systems, and the harder engineering problem is running many of them at once: checking what they produce, governing what they can touch, and keeping their cost in line with the value they create. InfoBeans calls this engineering the agentic enterprise. It is the focus of the company's Claude practice, which builds with Claude, powered by Anthropic, for clients in the US, Europe, the Middle East and India.

InfoBeans runs its own business the same way. As of March 2026, 43% of its revenue came from AI-led software engineering services.

"The question our clients ask has changed. It is no longer whether an agent can do the job. It is what the company looks like when agents do a meaningful share of the work, and who makes sure they do it reliably, safely and at a cost the CFO will sign off," said Mitesh Bohra, Co-founder, InfoBeans. "You can't deploy AI and walk away. Someone has to engineer how it runs. Achieving the Select tier recognizes the certified team that does that work with Claude, and we are building from here."

The Claude practice draws on InfoBeans' own AI engineering products:

- **Insane SDD 2.0**, a spec-driven development framework that takes business requirements to enterprise-grade code faster;
- **RAI (Reliability and Assurance Intelligence)**, an assurance layer built on the Model Context Protocol that validates AI-generated output before people and systems rely on it;
- **Expona 2.0**, an AI agent that answers from an enterprise's public and proprietary knowledge in real time.

The practice also brings InfoBeans' experience on the platforms where much enterprise work already happens, including ServiceNow, which named InfoBeans a 2026 Partner of the Year, and Salesforce. InfoBeans holds ISO/IEC 42001 certification for its AI management system.

InfoBeans plans to keep growing its Claude-certified team and to bring agentic engineering to its enterprise clients across banking and financial services, storage and virtualization, and other sectors.
