F&B out-of-home sales volume dips 8.6% in FY26

Meenakshi Verma Ambwani
New Delhi

Out-of-home sales volume for the food and beverage sector dipped by 8.6 per cent in the April 2025-March 2026 period, while value growth stood at 0.5 per cent, according to estimates by Worldpanel by Numerator.

The report noted the growing focus on healthier options and group consumption occasions are reshaping the dynamics of out-of-home F&B sales.

"Out-of-home F&B segment sales in volume has been lower than in previous years or less on par in terms of value. This is due to the general tightness witnessed in consumer spending during this period. When consumers are looking for ways to reduce expenditure, one of the things they tend to do is reduce their out-of-home spending," said K Ramakrishnan, MD, South Asia, Worldpanel by Numerator.

VALUE GROWTH

The dip in volumes was reflected across metros, mini-metros, NCCS A, B and C consumer cohorts. Categories such as juice-based drinks, biscuits and cookies and ice creams were seen struggling to drive growth in the out-of-home channel during this period.

The report noted that categories such as chocolates, salty snacks and energy and sports drinks continued to witness growth in volume, occasion and pack growth.

At the same time, rising focus on healthier food options at home has begun to reflect in out-of-home consumption trends too.

Centre weighs quick charging system for e-buses

FUTURE TRANSIT. Government evaluating ₹25-50 lakh pantograph chargers for 18-m e-buses; they can recharge buses in minutes rather than hours

Amit Vijay Mohile
Mumbai

The Centre has reviewed a pantograph-based quick charging system for high-capacity electric buses that could reduce charging duration from hours to minutes, enabling 18-m articulated buses carrying around 130 passengers to recharge during brief stops and remain in near-continuous operation.

Heavy Industries Minister HD Kumaraswamy chaired the inter-ministerial meeting, which was attended by representatives from the Ministries of Finance, Power, Road Transport and Highways, Housing and Urban Affairs, as well as NITI Aayog.

The proposed system relies on rapid opportunity charging through overhead pantograph equipment installed at designated loca-

EMPOWERING RIDE. Instead of relying on lengthy charging, buses will receive short, high-power top-ups during operations

tions along a route. Instead of relying solely on lengthy depot charging cycles, the buses will receive short, high-power top-ups during operations.

"The proposed system features 18-m bi-articulated electric buses with a capacity of around 130 passengers, supported by rapid flash/opportunity charging during short stops," said Kumaraswamy after the meet-

ing. "This can enable continuous operations while significantly reducing charging downtime."

He said the discussions explored the potential of such solutions to strengthen clean, efficient and future-ready urban mobility in India.

HIGHER COSTS

However, the technology comes with significant

higher infrastructure costs

Conventional public fast chargers typically cost about ₹7-12 lakh, depending on capacity and configuration. By comparison, heavy-duty 400-600 kW pantograph charging systems can cost ₹25-50 lakh or more per charging point, excluding any major grid upgrades required to support them.

The vehicle costs are also higher. Industry estimates place the cost of specialised 18-m articulated electric buses at roughly ₹2-3.5 crore, compared with around ₹1.5-2.2 crore for conventional 12-m electric buses.

The higher upfront investment has made financing a key focus of the discussions. The government is examining a framework that could combine targeted Central support, private-public partnerships and institutional financing mechanisms to reduce risks and improve pro-

ject viability

The business case hinges on a different operating model for electric buses. A conventional heavy electric bus may require two to four hours for a substantial or full depot charge, depending on battery size and charger capacity.

That generally requires larger battery packs capable

of powering long operating stretches between charging cycles.

Pantograph-based opportunity charging distributes bus charging energy across multiple short charging sessions during the day. Operating at several hundred kilowatts, such systems can recharge buses in minutes rather than hours.

This could allow operators to use smaller and lighter battery packs, reducing battery costs and vehicle weight.

At the same time, shorter charging interruptions can improve fleet utilisation by keeping buses on the road for longer periods, potentially increasing revenue-generating hours.
