Infosys and Linux Foundation Networking Collaborate to Strengthen Responsible AI for Global Networks

Infosys has contributed its Responsible AI Toolkit and AI application development framework to two new open source networking projects aimed at accelerating ethical enterprise AI adoption

London, UK and Bengaluru, India - March 31, 2025: [Infosys](#), (NSE, BSE, NYSE: INFY), a global leader in next-generation digital services and consulting, today announced its collaboration with [Linux Foundation Networking](#) (LFN), the facilitator of collaboration and operational excellence across open source networking projects, to advance Responsible AI principles and spur the adoption of domain-specific AI across global networks. This collaboration underscores a shared commitment to fostering responsible, effective, and sustainable AI technologies on a global scale.

As part of this initiative, Infosys has contributed its Responsible AI Toolkit and AI application development framework, part of [Infosys Topaz](#) AI offerings, to two new networking projects – Salus and Essedum. Powered by Infosys' comprehensive [Responsible AI Toolkit](#), Salus offers advanced technical guardrails to detect and mitigate AI risks like bias, privacy breaches, and harmful content, while enhancing model transparency. Built on Infosys' seed code and existing AI networking solutions, Essedum leverages its AI application development framework to accelerate the integration of AI data, models, and applications within the networking industry.

“Our efforts to further domain-specific AI are coming to fruition with the addition of these new projects, and we are incredibly grateful to Infosys for their contributions,” said **Arpit Joshipura, General Manager, Networking, Edge and IoT at the Linux Foundation**. “Creating combined, open and unified frameworks will only accelerate AI-driven innovation. By introducing accessible solutions for Responsible AI and integrating data sharing, domain-specific AI tools, and application development under one roof, we are enabling the industry to build smarter, more efficient networks.”

“At Infosys, we are deeply committed to advancing innovation that solves complex challenges while upholding transparency, fairness, and trust. Our collaboration with the Linux Foundation is a testament to our shared vision of embedding Responsible AI principles into actionable solutions. Linux Foundation's efforts in driving excellence in open-source networking projects have been remarkable. With our strong AI capabilities, powered by Infosys Topaz, we actively support this endeavor, helping organizations harness domain-specific AI responsibly and effectively across global networks,” said **Mohammed Rafee Tarafdar, Chief Technology Officer, Infosys**.

About The Linux Foundation

The Linux Foundation is the organization of choice for the world's top developers and companies to build ecosystems that accelerate open technology development and industry adoption. Together with the worldwide open source community, it is solving the hardest technology problems by creating the largest shared technology investment in history. Founded in 2000, The Linux Foundation today provides tools, training and events to scale any open source project, which together deliver an economic impact not achievable by any one company. More information can be found at www.linuxfoundation.org.

The Linux Foundation has registered trademarks and uses trademarks. For a list of trademarks of The Linux Foundation, please see our trademark usage page: <https://www.linuxfoundation.org/trademark-usage>.

Safe Harbor

Certain statements in this release concerning our future growth prospects, or our future financial or operating performance, are forward-looking statements intended to qualify for the 'safe harbor' under the Private Securities Litigation Reform Act of 1995, which involve a number of risks and uncertainties that could cause actual results or outcomes to differ materially from those in such forward-looking statements. The risks and uncertainties relating to these statements include, but are not limited to, risks and uncertainties regarding the execution of our business strategy, increased competition for talent, our ability to attract and retain personnel, increase in wages, investments to reskill our employees, our ability to effectively implement a hybrid work model, economic uncertainties and geo-political situations, technological disruptions and innovations such as Generative AI, the complex and evolving regulatory landscape including immigration regulation changes, our ESG vision, our capital allocation policy and expectations concerning our market position, future operations, margins, profitability, liquidity, capital resources, our corporate actions including acquisitions, and cybersecurity matters. Important factors that may cause actual results or outcomes to differ from those implied by the forward-looking statements are discussed in more detail in our US Securities and Exchange Commission filings including our Annual Report on Form 20-F for the fiscal year ended March 31, 2024. These filings are available at www.sec.gov. Infosys may, from time to time, make additional written and oral forward-looking statements, including statements contained in the Company's filings with the Securities and Exchange Commission and our reports to shareholders. The Company does not undertake to update any forward-looking statements that may be made from time to time by or on behalf of the Company unless it is required by law.
