PRESS RELEASE

Redington Partners with Salicru to Expand Access to Power Protection Solutions across the Middle East & Africa

The partnership combines Salicru's power electronics expertise with Redington's channel reach to help businesses protect critical technology and maintain operational continuity.

Dubai, UAE, 13th November 2026: Redington, the technology ecosystem orchestrator shaping how technology is brought to market, scaled and adopted across geographies, has announced a distribution partnership with Salicru, a Spanish manufacturer of power electronics and uninterruptible power supply (UPS) systems, for the Middle East and Africa region. The collaboration will broaden access to power protection solutions and create opportunities for channel partners to address business continuity requirements across the country.

Reliable power is fundamental to the technology businesses depend on every day. From servers and networking equipment to critical operational systems, interruptions and electrical disturbances can damage equipment, disrupt services and put data at risk. The partnership brings together Salicru's engineering expertise and Redington's local market capabilities to help partners address these requirements as part of a broader infrastructure offering.

Founded in 1965, Salicru develops and manufactures solutions that protect professional, industrial and household systems against power supply disturbances. Its UPS range spans smaller IT environments, online single-phase and three-phase solutions in mega-watts, and modular configurations for applications requiring scalability and high availability. Multi-Mega watt deployments in the region, places Salicru as one of the unique power electronics manufacturer to adapt customer needs by its customs tailormade solutions.

These capabilities are particularly relevant to data centres, where power continuity underpins critical workloads and service availability. Salicru's UPS solutions help keep servers, storage and networking systems operational during power interruptions, while its modular systems allow protection capacity to grow alongside infrastructure. This gives partners an opportunity to integrate power protection into data centre expansion and modernisation projects.

Through its channel network, market knowledge and distribution capabilities, Redington will connect Salicru with resellers and systems integrators across the region. The collaboration aims to help partners identify power protection opportunities alongside their existing technology deployments, strengthening their ability to deliver more complete solutions.

Sukhil Nair, President, UAE, Redington, said, "As businesses deepen their reliance on digital infrastructure, power continuity becomes a strategic consideration in how they invest, operate and grow. Our partnership with Salicru strengthens our ability to help partners address this requirement as part of a complete technology offering. As an ecosystem orchestrator,

PRESS RELEASE

Redington brings together specialist expertise, market access and channel capabilities to support technology adoption. Together, we can help partners move the conversation beyond equipment to protecting the operations and services that businesses depend on."

Raheel Islam, Director Salicru Middle East & Africa, said, "Working with Redington gives us a strong platform to reach a wider network of partners and businesses across the region. Our focus is on protecting equipment and maintaining power continuity across a broad range of applications. Redington understands of the market and established channel relationships will help us bring that expertise closer to organizations seeking dependable power protection."

The partnership strengthens Redington's infrastructure portfolio while extending Salicru's reach through the channel, helping businesses access the power protection needed to support their daily operations and future technology investments.
