Kellton Selected to Build AI-Driven Enterprise Claims Management Platform for Leading U.S. Healthcare Company

Strategic engagement strengthens Kellton's healthcare technology capabilities across AI-led modernization, enterprise integration, and intelligent automation

Hyderabad, August 24, 2026: Kellton, an AI-led digital transformation and enterprise technology consulting company, has been selected by a leading U.S. healthcare administration and claims management company to design and build an AI-driven enterprise claims management platform. The strategic engagement will modernize complex claims operations through a unified digital architecture, creating the foundation for intelligent automation, greater operational visibility, and AI-led transformation across the claims lifecycle.

The engagement will bring healthcare, dental, and workers' compensation claims operations onto a unified enterprise platform, replacing multiple disconnected systems and workflows across the claims lifecycle, from digital submission and verification through review, workflow management, and settlement.

Designed to serve as a central hub within the client's broader operating ecosystem, the platform will integrate with provider networks, policy administration systems, and billing and payment services, enabling information to flow reliably among the stakeholders involved in claims processing.

By consolidating fragmented claims systems, data, and workflows into a unified architecture, the engagement is designed to improve operational visibility, reduce administrative complexity, accelerate claims processing, and establish a scalable foundation for AI-powered automation and intelligence across claims operations. Built for a regulated healthcare environment, the platform will combine enterprise engineering and complex systems integration with the accuracy, auditability, data integrity, and reliability required for mission-critical operations.

The engagement further strengthens Kellton's growing healthcare technology capabilities and reflects its ability to help enterprises modernize complex operating environments where AI adoption depends on trusted data, connected systems, and well-orchestrated workflows.

Karanjit Singh, CEO APAC, Kellton, said:

"The healthcare industry is at an important inflection point, where the opportunity presented by AI must be matched by the ability to modernize the complex data, systems, and workflows that underpin critical operations. Claims management is a strong example of this complexity, requiring multiple stakeholders, regulated data, and interconnected processes to work seamlessly together.

This engagement reflects our ability to bring that complexity onto an integrated, scalable foundation and create the architecture required for AI-driven operations. By combining deep enterprise engineering, integration, and intelligent automation capabilities, we aim to help healthcare organizations improve operational efficiency while creating a pathway to translate AI investments into meaningful business outcomes.”

About Kellton

Kellton is an AI-led digital transformation and technology consulting company with global delivery capabilities. The company partners with enterprises to build scalable digital platforms, modernize operations, and accelerate intelligent automation journeys. With over 2,000 professionals across North America, Europe, the Middle East, and Asia, Kellton delivers solutions across cloud, data, AI, enterprise platforms, and digital product engineering.
