## **Kellton Selected by a Leading UAE Enterprise Group to Build a Unified Digital Operating Platform for Scalable Growth**

**Hyderabad, May 26, 2026:** Kellton Tech Solutions Ltd., an AI-led digital transformation and enterprise technology consulting company, has been selected by a leading UAE enterprise group to design and implement a unified digital operating platform that will integrate governance, business operations, financial management, and enterprise-wide decision-making, enabling the organization's next phase of scalable growth.

The client operates across commercial real estate, property services, and managed operations, serving enterprise customers, government-linked entities, and a broad service ecosystem. As the business expanded, increasing operational complexity created the need for a more integrated, transparent, and scalable operating model.

At the core of the engagement is a cloud-native digital platform that will replace fragmented legacy systems and establish a single source of truth across governance, operational workflows, financial processes, and stakeholder interactions. Designed with multilingual and mobile-first capabilities, the platform will integrate with UAE PASS and connect people, processes, data, and systems across the enterprise.

The platform's architecture is designed to support intelligent automation, predictive reporting, advanced analytics, AI-ready data foundations, and real-time operational insights

The engagement reflects a growing trend across the Middle East, where enterprises are investing in integrated digital operating platforms to enhance governance, improve operational control, and accelerate business performance. For Kellton, it further strengthens the company's position in enterprise integration, cloud modernization, intelligent automation, and data-driven digital transformation while expanding its presence in one of the world's fastest-growing digital transformation markets.

### **Statement from Karanjit Singh, CEO – APAC, Kellton Tech Solutions Ltd.**

*"As organizations grow, operational complexity often increases faster than visibility and control. Business leaders today are looking beyond standalone technology investments and toward connected digital environments that bring governance, operations, financial management, and decision-making together on a unified foundation."*

*"This partnership reflects the increasing demand for integrated digital platforms that improve transparency, strengthen accountability, and enable faster execution. By combining cloud-native architecture, enterprise integration, intelligent automation, and real-time operational insights, we are helping create a scalable digital foundation that supports long-term growth while enhancing agility and operational resilience."*

### **About Kellton**

Kellton is an AI-led digital transformation and technology consulting company with global delivery capabilities. The company partners with enterprises to build scalable digital platforms, modernize operations, and accelerate intelligent automation journeys. With over 2,000 professionals across North America, Europe, the Middle East, and Asia, Kellton delivers solutions across cloud, data, AI, enterprise platforms, and digital product engineering.
