

Home Office appoints Mastek to develop Shared Service Bus and Common Data Platform for its Immigration Platform Technologies Programme

Reading, U.K. – 11 February 2014 - Mastek, the provider of enterprise level technology services and solutions, has today announced that it has been appointed to work alongside the Home Office's Immigration Platform Technologies (IPT) team to develop and test a Shared Service Bus (SSB) to support communication between various Immigration and Enforcement systems.

The IPT programme is a major programme for the Home Office designed to significantly update and refresh a key legacy service. Mastek recognises the importance of this key programme both to the Home Office and to the ongoing maturity of Mastek as a key direct supplier to Government clients. In addition, Mastek has been awarded a second contract on the same IPT Programme: the Common Data Platform (CDP) which will create a single, consistent view of immigration and related data, reducing data consistency issues and enabling the closure of legacy systems as their data is transferred in to the CDP. Both developments will be conducted using Agile and have been let under the Crown Commercial Service (CCS) G-Cloud Framework.

Joe Venkatamaran, Chairman of Mastek UK, commented on the award: "Mastek is delighted to be selected as the IT development partner to the Home

Office on these two projects. Our solution is aligned to the UK Government's Service Design Manual and fully meets the technical, Agile and collaboration requirements of the programme. We recognise the strategic importance of these projects and we look forward to bringing our expertise in support of the Home Office vision for the IPT programme to transform the way immigration into the UK is managed. "
