Subject Magellanic Cloud's subsidiary Provigil Strengthens AI-Led E-Surveillance Footprint Across India's Critical Rail Infrastructure with Third DFCCIL Order Worth ₹3.29 Crore in Ajmer Division

Magellanic Cloud Limited, through its wholly owned subsidiary **Provigil Surveillance Limited**, continues to deepen its presence in India's critical infrastructure security landscape after receiving a Letter of Acceptance (LOA) worth **₹3,29,01,600/- from Dedicated Freight Corridor Corporation of India Limited (DFCCIL), Ajmer.**

Importantly, this marks the **third order secured from DFCCIL in the past few weeks**, following two earlier orders valued at approximately **₹3.73 crore** and **₹8.90 crore**, respectively. Together, these three wins represent a **combined order value of over ₹15.9 crore**, highlighting the growing confidence of one of India's most strategically important rail infrastructure organisations in Provigil's e-surveillance capabilities.

The latest order covers the SITC, Operation and Maintenance of an AI-led E-Surveillance System with Intrusion Monitoring across ALHs, SP/SSP/ATS/TSS, Common Stores and other locations, including the Control Centre at **New Saradhana DFCCIL Station** in the Madar-New Palanpur section of the Western Dedicated Freight Corridor (WDFC), under the **CGM Ajmer Unit**. The project will be executed on an OPEX model for a period of five years.

More than just conventional CCTV deployment, the project represents connected, centrally managed and intelligence-enabled infrastructure security. The solution encompasses IP-based cameras and associated integration with the DFCCIL communication network, centralised monitoring, automated incident alerts and escalation, centralised dashboards for reporting, as well as technical manpower and e-surveillance services.

AI is increasingly transforming the way large infrastructure networks detect, assess and respond to security events; intelligent e-surveillance has hence emerged as a critical layer in the protection of high-value assets. Provigil's technology-led approach brings together networked e-surveillance and centralised command infrastructure to enable more data-driven security operations.

The latest win further boosts Magellanic Cloud's positioning at the intersection of AI, e-surveillance and critical infrastructure, where technology is moving security systems from passive recording towards proactive monitoring, faster incident response and smarter operational visibility.

The order has been awarded in the ordinary course of business and is aligned with the Company's core business of providing integrated e-surveillance, security and technology solutions.

The Company remains committed to executing the project to the highest standards of quality, efficiency and operational excellence while continuing to pursue similar opportunities across the transportation, government and critical infrastructure sectors.

We request you to kindly take the above information on record.

Thanking you,
Yours faithfully,
For Magellanic Cloud Limited

Jagan Mohan Reddy Thumma
