AdvantageGo Launches Underwriting, a Workbench Powered by Data Insights to Drive Underwriting Excellence and Improve Discipline

London, April 30, 2019 – Recognising the rapidly growing need to maintain underwriting discipline as the insurance market enters the digital era, [AdvantageGo](#), the commercial insurance and reinsurance product family from [NIIT Technologies](#), today announces the launch of its ‘Underwriting’ workbench solution.

Specifically designed for and in partnership with underwriters, ‘Underwriting’ streamlines and automates low-value tasks, systemises processes and improves operational excellence. Powered by an ecosystem of data providers that supports data led decisions, ‘Underwriting’ proactively delivers new business insights and risk specific knowledge. When combined with an underwriter’s own intellectual property and existing data assets, underwriters can begin to create new products, understand risk at new levels of granularity and differentiate beyond their peers.

‘Underwriting’ consolidates and provides all underwriting functions into a single platform, integrates into established core policy administration systems and leverages other existing IT investments. Delivered through a centralised product management workbench utilising integration, orchestration, workflow, standard business processes and a rules engine, ‘Underwriting’ systemises an underwriter’s knowledge and delivers analytics-driven insights throughout the decision-making process, all the while adhering to corporate governance and compliance standards. It consolidates all underwriting tasks into one system, driving significant benefits in operational efficiency and data accuracy that massively increases the velocity and agility of decision making.

“With a rise in the volume and format of data to analyse, underwriters need to quickly and accurately evaluate structured and unstructured data delivered through various channels”, said **Adrian Morgan Executive Vice President and Head of AdvantageGo at NIIT Technologies**. “In the digital age, underwriters need to quickly respond to shifting market needs and create and offer new products and policies. Our ‘Underwriting’ workbench leverages an underwriter’s experience and capabilities to augment risk assessment and mitigate risk. A digital foundation which provides rich functionality that will equip underwriters with the tools to address new business models and support their digital future.” Morgan added, “We are extremely pleased about the level of interest for ‘Underwriting’, and our first major implementation is underway.”
