ORACLE® Press Release

Oracle Introduces Oracle Financial Services Data Warehouse

The First Pre-built, Comprehensive and Readily Deployable Financial Services Data Warehouse is Now Certified for Oracle Software and Oracle Exadata Database Machine

REDWOOD SHORES, Calif. – Jan. 27, 2011

News Facts

- Oracle today unveiled Oracle Financial Services Data Warehouse.
- Financial services institutions around the globe now find that many first-generation data warehouse initiatives have proven difficult to complete, costly to maintain and ultimately fail to meet the complex computational demands of the current business climate.
- Built on years of global tier-one financial services domain experience, the Oracle Financial Services Data Warehouse is a new approach to data modeling and data warehousing – one that is pre-built for rapid deployment, purpose-built for end-use decision making and designed to specifically address the complex and cross-functional analytical challenges of global financial institutions.
- Oracle Financial Services Data Warehouse offers financial institutions the ability to readily access crucial information across the entire organization, with detailed insight into the customer, finance, compliance and risk-related data and activities needed to address comprehensive reporting requirements.
- Oracle Financial Services Data Warehouse is ready for analytical applications from third parties, in-house developers or customers may choose from the many pre-built and industry recognized, Oracle Financial Services Analytical Applications.

New Generation of Data Warehousing

- The Oracle Financial Services Data Warehouse has been developed to specifically address an institution's analytical needs in risk, finance, compliance and customer insight. By leveraging Oracle Financial Services' deep domain experience in global tier-one institutions, customers can:
 - Readily deploy a pre-built, comprehensive, conformed and end-use proven data model designed for simplified extract, transform, load (ETL), fastest load times and fastest query response times.
 - Control and manage analytical data with a unified infrastructure that runs analytical applications and complex reporting in the warehouse to easily handle the high-volume, cross-functional computations required to meet today's emerging regulatory mandates for liquidity and stress testing.

- Address accuracy and consistency issues with contextual data-quality checks and automate the removal of inconsistencies across ledgers and books with centralized reconciliation capabilities.
- Access a single, conformed and pre-built, "self-service" reporting and business intelligence environment that supports cross-functional analytics by design and is easily extensible to meet future demands.
- Leverage the extreme performance, scalability and manageability of Oracle® Exadata Database Machine to process complex analytical scenarios previously thought impractical and deliver answers faster than ever before.

Supporting Quotes

- "Improving the quality and consistency of decisions is a renewed priority for major industries, as enterprises need to get a better handle on their risk exposure, ensure that they comply with new regulations, and gain the maximum return for each customer interaction," said Henry Morris, senior vice president, Worldwide Software and Services Research, IDC (IDC, "Decision Management in Industries: Linking Strategic, Operational, and Tactical Decisions," Doc. # 222483, March 2010).
- "Next generation data warehouse initiatives in financial services demand a new approach that starts with the end use in mind – the focus now shifts from the indiscriminate, tedious capture and stewardship of all data, to the speed and specific context in which comprehensive decisions must now be made," said S. Ramakrishnan, group vice president and general manager, Oracle Financial Services Analytical Applications. "Oracle's deep financial services domain experience, coupled with Exadata, has allowed us to develop a fully realized, solution-driven, high performance platform that is ready to deploy and meets today's regulatory requirements and liquidity challenges."

ORACLE® Press Release

Oracle Financial Services Introduces Oracle Reveleus Liquidity Risk Management

New Product Helps Financial Institutions to Effectively Identify and Assess Liquidity Risk, Develop Strategies to Bridge Stressed Liquidity Gaps and Achieve Compliance

Redwood Shores, Calif. – Jan. 27, 2011

News Facts

- Oracle Financial Services today announced Oracle Reveleus Liquidity Risk Management, the newest addition to the Oracle Financial Services Analytical Applications suite.
- The new solution helps financial institutions facilitate compliance – including compliance with Basel III liquidity provisions – and promote sound operating practices by enabling them to clearly identify and assess enterprise-wide liquidity risk under normal and extreme market conditions, and develop strategies to effectively bridge liquidity gaps.
- With Oracle Reveleus Liquidity Risk Management, banks have a single solution that helps to ensure compliance with new and emerging regulatory requirements – including Individual Liquidity Adequacy Assessment Standards of the Financial Services Authority (FSA) and Principles for Sound Liquidity Risk Management and Supervision of the Bank for International Settlements (BIS) – as well as an institutions' own internal risk requirements.
- With Oracle Reveleus Liquidity Risk Management, banks can identify and assess liquidity risk under business-as-usual as well as stressed business conditions. The solution helps centrally define and manage a comprehensive range of behavior assumptions for flexibility in designing stress scenarios and enables banks to specify conditions at any level of granularity.
- Oracle Reveleus Liquidity Risk Management is designed to work with existing asset and liability management (ALM) systems, like Oracle Financial Services Asset Liability Management, already used by leading global institutions. A single repository of shocks and scenarios ensures definition consistency and enables enterprise-wide stress testing for comprehensive visibility.
- The product also supports banks' efforts to manage liquidity hotspots, by enabling them to define, apply and assess multiple counterbalancing strategies and contingency funding plans to identify the best approach for bridging liquidity gaps. Existing Oracle Financial Services Analytical Applications customers can further leverage their existing Oracle investments with this new application engineered to work with their existing risk and performance applications from Oracle Financial Services as well as other third-party solutions.
- To enable detailed analysis of liquidity risk, Oracle Reveleus Liquidity Risk Management features a comprehensive set of pre-built reports and dashboards covering all aspects of liquidity risk management, including FSA-specified reporting templates.
- Oracle Reveleus Liquidity Risk Management is part of Oracle Financial Services Analytical Applications including Oracle Reveleus Basel II, Oracle Financial Services Asset Liability Management and other risk applications which help financial institutions to measure and

meet risk-adjusted performance objectives, promote a risk-management culture and mitigate the costs of regulation and compliance.

Supporting Quotes

- "All financial institutions, irrespective of current or potential regulatory requirements, should adopt a methodology across all business and technology activities that standardizes and integrates the management of risk data, calculations and reporting in order to understand the overall nature of risk exposures including correlations, dependencies and offsets," says Doug McKibben, research vice president at Gartner. "A consistent and timely approach to enterprise data provides the intersection point for linking risk and performance management and centralizing decision-making processes for absorbing, limiting or transferring risks based on performance priorities."
- "In an era of increased regulatory requirements – including the onset of Basel III – and heightened shareholder scrutiny, financial institutions are rethinking their approach to liquidity risk management. They are seeking solutions that enable them to proactively and centrally identify and assess risk under many types of market conditions, and develop effective plans for closing liquidity gaps," said S. Ramakrishnan, group vice president and general manager, Oracle Financial Services Analytical Applications. "Oracle Reveleus Liquidity Risk Management provides banks with the comprehensive information and insight required to efficiently and effectively focus on managing liquidity risk to the satisfaction of regulators, customers and shareholders alike."
