OIL Achieves Safe Capping of Well 76 at Kharsang

Duliajan, 22 Nov 2025: Oil India Limited (OIL) has successfully completed the capping operation at Well, KSG#76 of the Kharsang Oil Field (KOF), operated by GeoEnpro Petroleum Ltd (GEPL) in Changlang district, Arunachal Pradesh, marking a major milestone in its well control efforts.

A blowout had occurred on 30 October 2025 during service operations causing uncontrolled gas release from the well. OIL's Crisis Management Team (CMT), supported by experts from Cudd Well Control, USA and GeoEnpro Petroleum Limited team, took over the operations on 01.11.2025 and immediately mobilised to undertake the complex task of safely removing the damaged Blowout Preventer (BOP) from the wellhead. The high-risk operation was executed with precision, expertise and seamless coordination.

Following the safe removal of the BOP, the pre-positioned capping stack—meticulously placed at the well site—was accurately installed onto the wellhead. This critical step redirected the gas flow securely to the top of the stack, ensuring full containment and control. With the capping stack firmly in place and secured, the BOP was successfully closed, effectively stopping the gas discharge from the Well, KSG#76.

The completion of the capping operation stands as a testament to OIL's engineering acumen, detailed planning, and the strong collaboration between global specialists and local teams. The subsequent phases of the well control roadmap will now proceed in accordance with established operational protocols.

This achievement reflects the resilience, dedication and teamwork of everyone involved. OIL acknowledges the exemplary contributions of its Crisis Management Team, experts from Cudd Well Control, USA, GeoEnpro Petroleum Limited team, and the committed field teams who worked tirelessly under challenging conditions.

OIL expresses its sincere gratitude to the District and State Administration of Arunachal Pradesh, the Ministry of Petroleum & Natural Gas (MoPNG), and the local community for their steadfast support, which played a pivotal role in the safe and timely execution of this operation.

OIL remains steadfast in its pursuit of safe, sustainable and efficient operations in every sphere of its work.
