Dear Sir/Madam,

Sub: Intimation on publication of financial results in the newspapers

Pursuant to Regulation 47(1)(b) of SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed herewith newspaper advertisement published in following mentioned newspapers on Monday, 08th August, 2022: Business Standard (English) and Jai Hind (Gujarati) about the Extract of Unaudited Financial Results (Standalone) for the Quarter ended June 30, 2022.

The same is also available on the website of the Company at www.rushil.com

This is for your information and record.

Thanking you,

Yours Faithfully,

For, Rushil Decor Limited,

Hasmukh K. Modi
Company Secretary

Satellites on wrong orbit: First mission on SSLV fails

PRESS TRUST OF INDIA
Sriharikota, 7 August

The Indian Space Research Organisation (Isro) on Sunday said the satellites on board its maiden Small Satellite Launch Vehicle “are no longer usable” after the SSLV-D1 placed them on an elliptical orbit instead of a circular one.

The space agency said a committee would analyse and make recommendations into today’s episode and with the implementation of those recommendations “Isro will come back soon with SSLV-D2”. “SSLV-D1 placed the satellites into 356 km x 76 km elliptical orbit instead of 356 km circular orbit. Satellites are no longer usable. Issue is reasonably identified. Failure of a logic to identify a sensor failure and go for a salvage action caused the deviation,” Isro said in an update on its official Twitter handle.

It added a detailed statement by ISRO Chairman S Somanath will be “uploaded soon”. In its maiden SSLV mission, the launch vehicle carried The Earth Observation Satellite EOS-02 and the co-passenger student satellites AzaadiSAT.

SSLV had suffered ‘data loss’ in its terminal stage, after performing “as expected” in all stages. It had earlier after lifted off from the spaceport on Sunday morning.

Unlike Isro’s trusted workhorse — Polar Satellite Launch Vehicles (PSLV) — the SSLV can carry payloads weighing up to 500 kg and deploy satellites into a 500 km low earth orbit.

“NO LONGER USABLE”

WHAT IS SSLV?

Small Satellite Launch Vehicle (SSLV) is a 34-metre tall, about 10-metre less than PSLV, and it has a vehicle diameter of two metres as compared to 2.8 metres of PSLV

OBJECTIVES OF SSLV

To provide inputs on thermal anomalies towards supporting applications in the domains of geo-environmental studies, forestry, hydrology, agri, soil & coastal studies

WHAT WAS ITS GOAL?

To place satellites EOS-02 and AzaadiSAT into low earth orbit

WHAT WENT WRONG?

SSLV-D1 placed the satellites into 356 km x 76 km elliptical orbit, instead of 356 km circular orbit. Isro cited the failure of the mission to ‘failure of a logic to identify a sensor failure and go for a salvage action caused the deviation’

Isro's new offer, Small Satellite Launch Vehicle, during its launch from the Satish Dhawan Space Centre, in Sriharikota on Sunday

PHOTO: PTI

It uses solid fuel — hydroxyl terminated polubutadiene — to fire the first three stages which takes the payloads to the desired altitude.

The fourth stage comprises liquid propulsion-based Velocity Trimming Module (VTM) to place the satellites into orbit.

The objective of the EOS-02 was to provide inputs on thermal anomalies towards supporting applications in the domains of geo-environmental studies, forestry, hydrology, agriculture, soil, and coastal studies.

The AzaadiSAT carries 75 different payloads each weighing around 50 grams. Girl students from rural regions across the country were provided guidance to build these payloads which are integrated by the student team of ‘Space Kidz India’, ISRO said.

Sunday’s mission of ISRO is the third this year after the successful PSLV-CS3 mission on June 30, which is the dedicated commercial mission of NewSpace India.

Climate change makes forecast tough across world: IMD chief

PRESS TRUST OF INDIA
New Delhi, 7 August

Climate change has hampered the ability of forecasting agencies to accurately predict severe events and the India Meteorological Department (IMD) is installing more radars and upgrading its high-performance computing system to meet the challenge, IMD Director General Mrutyunjay Mohapatra said here.

He said that though the monsoon rainfall has not shown any significant trend in the country, the number of heavy rainfall events has increased and that of light rainfall events has decreased due to climate change.

The impact-based forecast will improve to become “more granular, specific and accurate” by 2025 and IMD will be able to provide forecasts up to panchayat level clusters and specific areas in cities in the coming years, the IMD chief told

“IMPACT-BASED FORECAST WILL IMPROVE TO BE “MORE GRANULAR, SPECIFIC AND ACCURATE” BY 2025, AND IMD WILL BE ABLE TO PROVIDE FORECASTS UP TO PANCHAYAT-LEVEL CLUSTERS

MRUTYUNJAY MOHAPATRA
director general, IMD

PTI in an interview.

“Climate change has increased the instability in the atmosphere, leading to an increase in convective activity—thunderstorms, lightning and heavy rainfall. The severity of cyclones in the Arabian Sea is also increasing.

“This increase in the frequency of extreme weather events is posing a challenge to forecasters. Studies show that the ability to predict heavy rainfall is hampered due to climate change,” he said.

The IMD is bolstering its observational network with the

augmentation of radars, automatic weather stations and rain gauges and satellites to improve predictability, he said.

“We have put up six radars in the northwest Himalayas and four more will be installed this year. The procurement process is on for eight radars in the northeast Himalayan region. “There are certain gap areas in the rest of the country that will be filled up with 11 radars. The number of radars will rise from 34 at present to 67 by 2025,” the IMD chief said.

Radars are preferred because they have a higher resolution and can provide observations every 10 minutes. The Ministry of Earth Sciences (MoES) also plans to upgrade its high-performance computing system—from a capacity of 10 petaflops currently to 30 petaflops in the next two years—which will help assimilate more data into the model that can then be run at higher resolutions.
