TAKE Solutions launches upgraded version of OneSCM Extended Supply Chain Collaboration Suite

New version includes expanded Demand Collaboration and Vendor Managed Inventory functionality for customers running SAP

Chennai, India, February 25, 2013—TAKE Solutions, a leader in the Supply Chain Management (SCM) and Life Sciences (LS) domains, today announced enhancements to its [OneSCM™](#) extended supply chain collaboration suite. The enhancements feature enriched functionality for customers running SAP. OneSCM offers flexible deployment and integration options to support cloud and on-premise, java, and .NET architectures.

One notable enhancement is the expansion of Demand Collaboration functionality to extend visibility and control over long-term materials requirements. Planners, buyers and suppliers are now able to collaborate on a broader level to proactively address potential delays in availability and ensure end-to-end customer requirements are met. Another notable enhancement is the expansion of Vendor Managed Inventory (VMI) functionality. Buyers and suppliers are able to better manage multiple external depots via graphical forecast time windows that allow potential shortages to be proactively resolved.

Young Kim, Director of Product Management, TAKE Solutions said, “OneSCM’s strength lies in its ability to integrate systems at the detailed level of operations. This creates an accelerated flow of reliable information and insights for better decision-making in critical areas of the supply chain. These latest enhancements in forecast collaboration and vendor managed inventory put a greater degree of proactive empowerment in the hands of daily decision-makers to more rapidly address potential disruptions in materials and product availability.”

About TAKE Solutions
