For Immediate Release

TAKE Solutions Announces New Release of OneSCM Extended Supply Chain Collaboration Suite

Latest version includes tight integration for customers running Oracle E-Business Suite, expanded functionality for procure-to-pay and AP automation, as well as added features for engineering quality collaboration.

Chennai, India, August 23, 2012: TAKE Solutions Ltd. [BSE: 532890 | NSE: TAKE], a leader in the Supply Chain Management (SCM) and Life Sciences (LS) domains, today announced a new release of OneSCM, a multi-enterprise collaboration suite for managing extended supply chain operations. The latest version introduces tight integration for customers running Oracle E-Business Suite (EBS) as well as enhancements in procure-to-pay, accounts payable (AP) automation, and quality collaboration. OneSCM offers flexible deployment and integration options to support cloud, on-premise, java, and .NET architectures.

The AP automation enhancements leverage OneSCM's workflow engine to incorporate expanded status notifications, invoice troubleshooting and document management. Procure-to-pay enhancements address the growing market need for integration with Quality Control (QC) to streamline operations and improve management by exception processes. Quality Document flexibility and full routing/audit history has also been added to OneSCM's Engineering Quality function to accelerate collaboration and extend compliance throughout the procure-to-pay process.

In addition to loose integration for companies operating multiple or disparate platforms, tight integration for customers running Oracle EBS R11 or R12 is now available, enabling business processes and critical control points-such as order acknowledgement and pre-ship verification-to extend out to the trading partner network.

"As management of the extended supply chain evolves into an increasingly important role, accelerators for decision making across critical areas such as procurement, accounts payable, and quality have become more valuable in helping companies collaborate smarter and execute faster," said **Young Kim, Director of Product Management, TAKE Solutions.** "This new version of OneSCM allows companies to further streamline supply chain execution and manage a greater number of closed-loop operations regardless of their technology platform."

Additional upgrades for OneSCM include:

- Expanded Label History. Expanded history and reprint from history to printer or pdf allows for a unified location for all label prints at company or trading partner location
- Web Label Print to PDF. Expanded Web Print functionality to allow the user to select multiple layouts for label printing. This allows the user to print labels to multiple types of label stock
- Expanded Data Integration. Import and conversion of CSV files for purchase order acknowledgements enable collaboration regardless of trading partner technology constraints
- Supplier Notification Portlet. Messages can be broadcast to specific user groups for a specific date range for targeted communication
- Rules-based data masking. Critical fields can now be masked from non-essential users

About TAKE Solutions

TAKE Solutions, Ltd. [BSE: 532890 | NSE: TAKE] is a leading global business technology company with domain expertise in Life Sciences (LS) and Supply Chain Management (SCM). TAKE provides cost-effective and comprehensive solutions for enterprises across diverse sectors including pharmaceuticals, high technology, consumer packaged goods, oil/gas, and automotive.
