## **TAKE Solutions Outlines a Strategic Plan to Build an Advanced AI-Driven Diagnostic & Preventive Care Platform as Part of Its Long-Term Value Creation Roadmap**

Targeting India's Rapidly Growing USD 197 Billion Preventive Healthcare Market

**Chennai, 23<sup>rd</sup> December 2025**, TAKE Solutions today announced its strategic plan to develop an advanced AI-powered Diagnostic & Preventive Care Platform, marking a major expansion into India's rapidly expanding preventive and diagnostic healthcare sector. As India moves rapidly toward digital-first healthcare, this launch positions TAKE Solutions at the center of one of the most powerful market transformations underway.

This planned platform represents TAKE Solution's vision to shape the future of healthcare as India transitions from treatment-focused systems to AI-led early detection, predictive diagnostics, and preventive care.

### **India's Preventive Healthcare Market Is Exploding:**

India is currently witnessing a structural shift in consumer behavior, with preventive care no longer optional but essential.

- India's **preventive healthcare market** is projected to cross **USD 197 billion by 2030**, driven by increased lifestyle diseases, growing health awareness, and rising disposable income.
- 3 in 5 Indians now recognize the importance of annual health checkups.
- The Indian diagnostics industry alone valued at **USD 13 billion**, is growing faster than global averages due to rising chronic illnesses and increased digital adoption.
- With **600+ million smartphone users**, India is emerging as one of the world's most fertile markets for AI-driven health platforms.
- More than **30% of Indians suffer from sleep issues**, **25% show signs of prediabetes**, and **1 in 4 adults is at risk of heart disease**, creating unprecedented demand for early detection and risk scoring tools.

**This combination of scale, digital readiness, and rising health consciousness makes India one of the world's strongest markets for AI-enabled preventive care solutions.** With India entering a decade defined by AI-enabled healthcare, TAKE Solutions is positioning itself as a **core technology enabler** in the shift from reactive treatment to preventive intelligence.

The planned platform is designed to serve the full spectrum of India's health ecosystem, where:

- Doctors will gain access to faster, AI-assisted clinical decision tools to enhance accuracy and efficiency in hospitals and diagnostic centers.
- Consumers will receive personalized preventive health insights at their fingertips.
- The goal is to bring accessible, accurate, and affordable health intelligence to every household.

***“India is entering a golden decade of preventive health,” said Vedamirtham Venkatesan, Executive Director & CFO of TAKE Solutions. “Our AI platform is built to serve a nation of 1.4 billion people who need accessible, accurate, and affordable health intelligence. We aim to bring sophisticated diagnostics and real-time preventive care to every household, not just hospitals and labs.”***

**This AI platform will strengthen TAKE Solution's technology leadership and open doors to multiple scalable opportunities in diagnostics, predictive healthcare, and data-driven health intelligence. As the preventive healthcare industry accelerates toward USD 197 billion, TAKE Solutions is strategically aligning itself to capture substantial market share and drive sustained growth, profitability, and shareholder value in the years ahead.**
