Dear Sir / Madam,

Sub: Press Release - Tata Communications Unveils AI Infrastructure with NVIDIA Accelerated Computing, Built for New Era of Computing in India

Please find attached herewith the press release on the captioned subject being issued today.

Kindly take the same on your records.

Thanking you,

Yours faithfully,
For Tata Communications Limited

Zubin Adil Patel
Company Secretary and Compliance Officer

Tata Communications Unveils AI Infrastructure with NVIDIA Accelerated Computing, Built for New Era of Computing in India

News summary:

- Tata Communications announces its AI Cloud infrastructure with NVIDIA GPUs
- First phase to begin at the end of this year, establishing Tata Communications' deployment as one of the largest NVIDIA Hopper GPU cloud-based supercomputers in India
- Collaboration to position Tata Communications as a key player in enabling AI applications across industries, including manufacturing, healthcare, retail, and banking and financial services

Mumbai, India, October 24, 2024 – Tata Communications today announced a transformative upgrade to its AI cloud infrastructure in India, powered by [NVIDIA Hopper GPUs](#). The strategic collaboration marks a significant milestone in the country's AI journey, positioning Tata Communications as a key player in enabling AI applications across a wide spectrum of industries — including manufacturing, healthcare, retail, and banking and financial services — and equipping them with the computing power needed to handle complex AI workloads.

As part of the initiative, Tata Communications will integrate cutting-edge NVIDIA software solutions such as NVIDIA NIM microservices, and the NVIDIA Omniverse and NVIDIA Isaac platforms, into its AI Cloud offerings. These technologies will provide businesses with an extensive suite of tools and services designed for AI-driven simulation, automation and more.

At the end of this year, Tata Communications will begin the first phase of its large-scale deployment of Hopper GPUs, establishing itself as one of the largest NVIDIA Hopper GPU cloud-based supercomputers in India. The second phase, planned for 2025, will further expand the infrastructure with Blackwell GPUs.

Tata Communications is poised to disrupt the AI landscape with an AI studio, a groundbreaking, all-in-one platform designed to transform how businesses use AI, by offering tools like AI Workbench, Model Garden, Responsible AI and serverless functions.

Further, its advanced tools will simplify distributed data management, allowing businesses to

TATA COMMUNICATIONS

efficiently collect and curate data across various enterprise systems and move it to the AI Cloud using Tata Communications' [IZO™ Multi Cloud Connect](#) platform. This approach will ensure cost-effectiveness and scalability for enterprises, while maintaining their existing data structures.

Complementing this is Tata Communications' [CloudLyte](#) Edge Computing platform, which enables low-latency inferencing, allowing businesses to deploy models at the edge for real-time responses. Together, these innovations empower enterprises to fully harness the power of AI.

“AI is expanding the boundaries of innovation and revolutionizing business in ways we could never have imagined,” said **AS Lakshminarayanan, MD & CEO, Tata Communications**. “Therefore, every entity must prioritise AI integration to stay competitive. We are delighted to partner with NVIDIA to build a unique and transformative Cloud Fabric that will empower a generation of Indian innovators and entrepreneurs, fostering a vibrant AI ecosystem and propelling the nation towards a future fuelled by AI.”

Providing enterprises with a powerful infrastructure capable of handling complex AI workloads will help drive AI adoption across India. Combining NVIDIA's AI platform with TATA Communications' global network, will create a national supercomputing framework, driving innovation and helping elevate India's role in the global AI player ranks.

“Tata Communications' AI cloud infrastructure, integrating NVIDIA accelerated computing, will support businesses of all sizes — from AI startups to large enterprises — helping drive artificial intelligence transformation across various sectors of the Indian economy and creating a powerful ecosystem for AI innovation,” said **Jay Puri, executive vice president of worldwide field operations at NVIDIA**.

Tata Communications customers will also gain access to the [NVIDIA AI Enterprise](#) software platform on its accelerated infrastructure, which is designed to let users build, customize and run generative and agentic AI applications in production. This includes [NVIDIA NIM Agent Blueprints](#), which provide customisable reference architectures for use cases like digital human technologies or AI virtual assistants for customer service, multimodal PDF extraction workflows for enterprise data retrieval and container security workflows for cybersecurity.

Enterprises can also create their own AI models using the [NVIDIA NeMo](#) end-to-end platform for developing custom generative AI, and run efficient AI inference through [NVIDIA's NIM](#) microservices — both part of the NVIDIA AI Enterprise — offering unparalleled flexibility and performance for AI workloads.

By integrating NVIDIA technologies, Tata Communications will continue to demonstrate its commitment to building next-generation AI infrastructure and services, positioning the company to lead India's AI transformation and make AI more accessible across industries.

Forward-looking and cautionary statements

Certain words and statements in this release concerning Tata Communications and its prospects, and other statements, including those relating to Tata Communications' expected financial position, business strategy, the future development of Tata Communications' operations, and the general economy in India, are forward-looking statements. Such statements involve known and unknown risks, uncertainties, and other factors, including financial, regulatory, and environmental, as well as those relating to industry growth and trend projections, which may cause actual results, performance or achievements of Tata Communications, or industry results, to differ materially from those expressed or implied by such forward-looking statements. The important factors that could cause actual results, performance or achievements to differ materially from such forward-looking statements include, among others, failure to increase the volume of traffic on Tata Communications' network; failure to develop new products and services that meet customer demands and generate acceptable margins; failure to successfully complete commercial testing of new technology and information systems to support new products and services, including voice transmission services; failure to stabilize or reduce the rate of price compression on certain of the company's communications services; failure to integrate strategic acquisitions and changes in government policies or regulations of India and, in particular, changes relating to the administration of Tata Communications' industry; and, in general, the economic, business and credit conditions in India. Additional factors that could cause actual results, performance, or achievements to differ materially from such forward-looking statements, many of which are not in Tata Communications' control, include, but are not limited to, those risk factors discussed in Tata Communications Limited's Annual Reports.

The Annual Reports of Tata Communications Limited are available at www.tatacommunications.com. Tata Communications is under no obligation to, and expressly disclaims any obligation to, update or alter its forward-looking statements.
