Dear Sir / Madam,

Sub: Press Release - Tata Communications to Build India's AI Super Highway

Please find enclosed herewith the press release titled "Tata Communications to Build India's AI Super Highway", being issued by the Company today (Annexure 1).

Further, the details required under the SEBI Master Circular dated January 30, 2026 are enclosed as Annexure 2.

Kindly take the above on record.

Thanking you,

Yours faithfully,
For Tata Communications Limited

PRESS RELEASE

Tata Communications to Build India's AI Super Highway

Planned USD 400 - 450 million investment to create 10,000 km of AI-ready connectivity infrastructure linking India's key data center and AI hubs

INDIA/USA, October 26, 2026

Tata Communications, a leading global communications technology player, today announced strategic investments of close to USD 450 million to build an AI super highway in India - a high-speed, low-latency network fabric connecting India's key AI data-centre corridors. The company will build around 10,000 kilometers of the new long-haul fiber across India, creating one of the country's largest AI-ready connectivity network. Integrated with Tata Communications' global network backbone, the AI super highway will provide customers with a seamless, end-to-end connectivity fabric, supporting the performance, resilience and scale required for next-generation AI workloads.

India's data centre industry is poised for significant growth in the near future, driven by accelerating cloud adoption, AI deployment, increasing data localisation requirements, and growing enterprise demand for resilient, high-capacity digital infrastructure. As data centre capacity expands rapidly across the country, connectivity is becoming as critical as compute power and energy availability in enabling the next generation of digital services.

Commenting on the strategic significance of the investment **Ganesh Lakshminarayanan, MD and CEO, Tata Communications, said,** "We are excited about the opportunity in the India data centre-to-data centre connectivity, which we believe could evolve into a market exceeding USD 1 billion over the medium term. With our planned investments, we are building on our existing strengths to create one of the most comprehensive data centre connectivity platforms in the market, positioning us to capture this significant growth opportunity. As we scale, a growing proportion of our expansion is being driven by anchor customer commitments and contracted demand, providing a strong foundation for sustainable growth, efficient capital deployment and long-term value creation."

KEY HIGHLIGHTS

- Planned investment of USD 400-450 million
- Approximately 10,000 km of new AI-ready connectivity infrastructure
- Three-phased expansion across India's highest growth AI corridors
- Infrastructure designed for global hyperscalers, AI platforms, neo-cloud providers and enterprises
- Will be integrated with Tata Communications' global network backbone

Rupesh Chokshi, Chief Product and Technology Officer, Executive Vice President & Global Business Head – Network Services, Tata Communications, said, "The AI economy needs more than compute. It needs a network built for speed, scale and resilience. Tata Communications has long played a

foundational role in enabling India's digital economy, and our AI Network Fabric builds on that legacy. Our AI Network Fabric will give our global customers the ultra-low-latency, high-capacity and resilient connectivity they need to scale AI with confidence. By connecting India's AI and data center hubs to the world, we are enabling our customers to grow and helping fuel India's next chapter of economic growth."

The investment aims to strengthen India's emergence as a global AI and cloud connectivity gateway, intending to meet the unprecedented demand from hyperscale and neocloud providers, AI workloads, digital-native businesses, Global Capability Centres (GCCs), enterprises and emerging cloud platforms. It will enable global hyperscalers, digital platforms and multinational enterprises to scale their operations in India with confidence as the country enters its next phase of digital transformation.

The first phase of the program will focus on the Mumbai-Pune-Hyderabad-Chennai corridor, one of India's most important AI and hyperscale growth routes. Subsequent phases will expand connectivity into emerging East Coast and Western India data centre ecosystems, including Vizag, Bhubaneswar, Jamnagar, GIFT City and other strategic locations. By linking the key AI corridors and data centre clusters with international cable landing stations, Tata Communications will enable seamless connectivity between India and major global AI hubs across, positioning India as a strategic gateway in the global digital infrastructure landscape.

In parallel, Tata Communications will continue to support existing enterprise and data centre connectivity requirements by scaling its current National Long Distance and metro network footprint, ensuring continued support for current growth while building capacity for future demand.

Tata Communications network fabric remains the backbone of its portfolio, operating among the largest wholly owned and most advanced subsea fiber network which underpins the internet backbone, spanning 500,000+ km of subsea optical fiber and 200,000+ km of terrestrial fiber. In a significant step forward for enterprise connectivity across countries, Tata Communications enhanced its Tata Global Network (TGN) capabilities in June 2026 by planning a new subsea cable system between Mumbai & Singapore and invested as a consortium member in a new subsea cable system, connecting Chennai to Singapore with expected Ready for Service (RFS) in Q4 2029. In 2025, it integrated the TGN IA2 (Tata Global Network – Intra-Asia 2) submarine cable, improving latency for faster performance, enhancing reliability through greater redundancy, and increasing network diversity through seamless interconnection with TGN IA.

**Forward-looking and cautionary statements**

Certain words and statements in this release concerning Tata Communications and its prospects, and other statements, including those relating to Tata Communications' expected financial position, business strategy, the future development of Tata Communications' operations, and the general economy in India, are forward-looking statements. Such statements involve known and unknown risks, uncertainties and other factors, including financial, regulatory and environmental, as well as those relating to industry growth and trend projections, which may cause actual results, performance or achievements of Tata Communications, or industry results, to differ materially from those expressed or implied by such forward-looking statements. The important factors that could cause actual results, performance or achievements to differ materially from such forward-looking statements include, among others, failure to increase the volume of traffic on Tata Communications' network; failure to develop new products and services that meet customer demands and generate acceptable margins; failure to successfully complete commercial testing of new technology and information systems to support new products and services, including voice transmission services; failure to stabilize or reduce the rate of price compression on certain of the company's communications services; failure to integrate strategic acquisitions and changes in government policies or regulations of India and, in particular, changes relating to the administration of Tata Communications' industry; and, in general, the economic, business and credit conditions in India. Additional factors that could cause actual results, performance or achievements to differ materially from such forward-looking statements, many of which are not in Tata Communications' control, include, but are not limited to, those risk factors discussed in Tata Communications Limited's Annual Reports.

The Annual Reports of Tata Communications Limited are available at www.tatacommunications.com. Tata Communications is under no obligation to, and expressly disclaims any obligation to, update or alter its forward-looking statements. © 2026 Tata Communications Ltd. All rights reserved. Annexure 2

Details as required under SEBI Listing Regulations read with SEBI Master Circular No. HO/49/14/14(7)2025-CFD-POD2/I/3762/2026 dated January 30, 2026

Particulars	Details
Existing capacity	1.25 Pbps of network capacity
Existing capacity utilization	~70% – 80%
Proposed capacity addition	~6 Pbps of additional network capacity
Period within which the proposed capacity is to be added	FY 2030 – FY 2036
Investment required	Capital Expenditure of ₹4,350 crores (~US\$400-450 million)
Mode of financing	Operating Cash Flows
Rationale	Please refer to the Press Release at Annexure 1
