

**FOR IMMEDIATE RELEASE****TAKE Solutions Releases OneSCM 7.1 Multi-Enterprise Online Collaboration Suite**

Latest version includes new mobile applications framework allowing trading partners to access/share data and perform transactions directly from mobile devices

Princeton, NJ, India, Chennai, Nov 9, 2011 - TAKE Solutions Ltd. [BSE: 532890 | NSE: TAKE], a leader in the Supply Chain Management and Life Sciences domains, today announced the availability of OneSCM 7.1, a multi-enterprise online collaboration suite for trading partners to manage supply chain operations. The latest version introduces a mobile applications framework that integrates with smartphones and tablets for immediate data access, sharing, and transaction activity in real-time. OneSCM 7.1 supports both .NET and Java architectures, and is now available via a full range of delivery models: on-premise, hosted, software-as-a-service (SaaS) or hybrid.

The new mobile applications framework leverages .NET mobile controls to extend OneSCM collaboration applications on multiple mobile platforms (tablets, smartphones) making applications fully compatible with mobile operating systems (Android, Windows Mobile, RIM and iOS) to better support customer supply chain activities at the work site or on-the-go—saving time, reducing errors, and allowing for quicker response times. Tasks such as processing work orders and checking an invoice status can be done remotely and securely, at any time.

"With the evolution of everything digital...mobility has quickly gained ground in streamlining supply chain execution. Mobility must be integrated into all business processes—especially those nimble workforces who rely on decision makers (who are constantly on the move)," said Young Kim, director of product management, TAKE Solutions. "In today's fast-paced world, information must be immediately and accurately available. The new version of OneSCM combines the collaboration power of both X.PC and OneSCM to provide trading partners the flexibility, intelligence, and control to execute a smooth orchestration to effectively and efficiently streamline supply chain execution."

Additional upgrades of OneSCM 7.1 include:

- **Improved XML Framework Standardizations.** Pre-configured data mapping in native XML is fully compliant with W3 XSD standards, making integration for sending and receiving business data faster and simpler. Additionally, OneSCM 7.1 supports interaction between trading partners using a variety of messaging formats including RosettaNet PIPs, OAGI DTDs, PIDX (Petroleum Industry Data eXchange), ANSI X12 EDI, EDIFACT and IDOCS.
- **Supplier On-Boarding Enhancements.** Smart search and validation algorithms better manage vendor master data, comparing each new supplier record to suppliers existing in the system to prevent duplication. Document and certification capabilities allow suppliers to electronically submit required certificates and other attachments for supplier approvals.
- **Multi-language support.** Now includes controls, pop-up messages and administration screens allowing for full language support.

- **Usability Advancements.** Advanced filtering and view searches, self-service password resets, and user-defined views have been upgraded to provide ease-of-use and extended customization capabilities.

OneSCM's online platform connects trading partners and aggregates data and activities from multiple back-end systems into a single, consolidated dashboard giving users visibility and control over their supply chain execution.
