Thinksoft Global announces Partnership with U.S.-based Nastel Technologies

Chennai, November 7, 2011 – Financial Software testing pioneers, Thinksoft Global Services Ltd. (BSE: 533121) (NSE: THINKSOFT) and U.S. based Nastel Technologies, a premier global provider of application performance monitoring solutions for mission-critical applications from the datacenter to the cloud, today announced a partnership that will utilize Nastel's AutoPilot® M6 diagnostic technology in Thinksoft's performance testing engagements. This will allow Thinksoft's customers to gain deep dive visibility into application performance, specifically middleware, across Java, .NET and messaging middleware.

Today's aggressive business environment has put pressure on financial services companies to successfully complete millions of transactions on a daily basis. In order to meet these demands, companies require the ability to proactively recognize performance issues with business critical applications and prevent problems from interrupting daily business, breaching SLAs and subsequently impacting revenue. To accomplish this task these organizations need applications that are successfully completing transactions on time, every time.

The combination of Nastel's award-winning AutoPilot solution with Thinksoft's market-leading services will provide deep visibility into middleware revealing issues that had previously been undetectable; thus, yielding more accurate and faster diagnostics of performance bottlenecks in the test and development stage. This in turn will allow for better application quality and an uptick in the number of problems identified within the middleware level before applications are sent into production. This is important as the earlier in an application's lifecycle a problem is resolved, the less expensive that resolution is.

"The inclusion of Nastel's technology in our performance testing engagements will allow us to extend our reach from QA and testing to production by creating a methodology that links QA, testing and production into a continuous improvement cycle," **said Mr. D. Nandkishore, Executive Vice President (US Operations), Thinksoft Global.** "This will reduce the hassle of production implementation and

time dependency on integration with management frameworks without compromising the application's availability as it moves into the production environment."

"This partnership allows organizations to optimize and improve Q/A test projects and subsequently identify problems earlier in the application lifecycle," **said Charley Rich, VP of Product Management, Nastel.** "Utilizing AutoPilot M6, organizations will see improved diagnostics in mixed Java, .NET and middleware environments, especially those with an IBM WebSphere footprint. This will allow organizations to reduce and simplify integration testing by providing better visibility into moving parts and simplify the process for reproducing production problems in test."

About Thinksoft Global:

Thinksoft is a pure-play software testing company, listed on the National and Bombay Stock Exchanges (NSE & BSE). Thinksoft specializes in helping Global Financial Sector firms to significantly improve the quality of their applications, software and systems. Through domain focus, Structured methodologies, offshore delivery centers and test automation expertise, Thinksoft help clients realize 'business ready software', compress timelines and reduce software product life cycle costs.

About Nastel:

Nastel Technologies is a premier global provider of application performance management solutions for mission-critical applications from the datacentre to the cloud. Nastel is a privately held company headquartered in New York, with offices in the U.S., the U.K., Germany and Mexico, and a network of partners throughout Europe, the Middle East, Latin America and Asia.
