Press Release

Dr. Reddy's announces the Launch of Sirolimus Tablets, 1 mg and 2 mg

Hyderabad, India, October 28, 2014

Dr. Reddy's Laboratories (NYSE: RDY) announced today that it has launched Sirolimus Tablets 1 mg and 2 mg, a therapeutic equivalent generic version of RAPAMUNE® (Sirolimus) tablets in the US market on October 27, 2014, following the approval by the United States Food & Drug Administration (USFDA).

The RAPAMUNE® tablets brand had U.S. sales of approximately \$206 Million MAT for the most recent twelve months ending in August 2014 according to IMS Health*.

Dr. Reddy's Sirolimus tablets in 1 mg and 2 mg are available in bottle counts of 100.

BOX WARNING: IMMUNOSUPPRESSION, USE IS NOT RECOMMENDED IN LIVER OR LUNG TRANSPLANT PATIENTS

• Increased susceptibility to infection and the possible development of lymphoma and other malignancies may result from immunosuppression

Increased susceptibility to infection and the possible development of lymphoma may result from immunosuppression. Only physicians experienced in immunosuppressive therapy and management of renal transplant patients should use sirolimus. Patients receiving the drug should be managed in facilities equipped and staffed with adequate laboratory and supportive medical resources. The physician responsible for maintenance therapy should have complete information requisite for the follow-up of the patient [see Warnings and Precautions].

• The safety and efficacy of sirolimus as immunosuppressive therapy have not been established in liver or lung transplant patients, and therefore, such use is not recommended [see Warnings and Precautions].

• Liver Transplantation — Excess Mortality, Graft Loss, and Hepatic Artery Thrombosis (HAT)

The use of sirolimus in combination with tacrolimus was associated with excess mortality and graft loss in a study in *de novo* liver transplant patients. Many of these patients had evidence of infection at or near the time of death.

In this and another study in *de novo* liver transplant patients, the use of sirolimus in combination with cyclosporine or tacrolimus was associated with an increase in HAT; most cases of HAT occurred within 30 days post-transplantation and most led to graft loss or death.

Warnings and Precautions

• Lung Transplantation — Bronchial Anastomotic Dehiscence

Cases of bronchial anastomotic dehiscence, most fatal, have been reported in *de novo* lung transplant patients when sirolimus has been used as part of an immunosuppressive regimen [see Warnings and Precautions]
