TAKE Solutions Ranked as one of the World's Successful and Growing Software & Services Companies by Software Magazine for 2013

~Listed at the 31st 'Annual Software 500' for Second Consecutive Year~

Chennai, India - October 3, 2013: TAKE Solutions Ltd. [BSE: 532890 | NSE: TAKE], a global leader in Life Sciences (LS) and Supply Chain Management (SCM) domains, today announced its inclusion in *Software Magazine's* Software 500 ranking of the world's largest software and service providers, now in its 31st year.

G Ramesh, Vice-President, Supply Chain Management, TAKE Solutions, said, "TAKE Solutions' unique IP-based IT services solutions has been able to create immense value to our customers across geographies. This recognition by our customers has translated into our inclusion into the industry's most prestigious global rankings list. We thank the jury for their confidence and appreciation."

"The Software 500 helps CIOs, senior IT managers, and IT staff research and create the short list of business partners," Desmond says. "It is a quick reference of vendor viability. And the online version, to be posted soon at www.softwaremag.com, is searchable by category, making it what we call the online catalog to enterprise software."

The Software 500 is a revenue-based ranking of the world's largest software and services suppliers, targeting medium to large enterprises, their IT professionals, software developers, and business managers involved in software and services purchasing.

The ranking is based on total worldwide software and services revenues for 2012. This includes revenues from software licenses, maintenance and support, training, software-related services and consulting. Suppliers are not ranked on total corporate revenue, since many have other lines of businesses, such as hardware. Financial information is gathered by a survey prepared by Rockport Custom Publishing, LLC, using public documents and company input. It is published in print as well as posted online on www.softwaremag.com both as a digital edition and as a searchable database.
