SECTION II. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the Scheme may go up or down. As with any investment in stocks, shares and securities, the NAV of the Units under the Scheme can go up or down, depending on the factors and forces affecting the capital markets.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the scheme.
- Sundaram Tax Savings Fund is only the name of the scheme and does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs 1 lakh made by them towards setting up the Fund (The present scheme) is not a guaranteed or assured return scheme.

Specific Risk Factors:

Risk Associated with Investing in Equities –

- The value of Scheme's investments may be affected by factors affecting the Securities markets and price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies if the Government, taxation laws and political, economic or other developments which may have an adverse bearing on individual securities, a specific sector or all sectors. Consequently, the NAV of the units of the Scheme may be affected.
- Equity & Equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Schemes' portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Schemes' portfolio.
- The liquidity and valuation of the Scheme investments due to the holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.
- Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options.
- The liquidity of the scheme is inherently restricted by trading volumes in securities in which it invests.
- Investment decisions made by the Investment Manager may not always be profitable.

Risk Associated with Investing in Debt and / or Money Market Instruments-

Price-Risk or Interest-Rate Risk: Fixed income securities such as bonds, debentures and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.

Credit Risk: In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. It must, however, be noted that where the Scheme has invested in Government Securities, there is no credit risk to that extent.

Re-investment Risk: Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Interest Rate Movement (Basis Risk): The changes in the prevailing rates of interest will likely affect the value of the Schemes' holdings until the next reset date and thus the value of the Schemes' Units will be affected. Increased rates of interest, which frequently accompany inflation and/ or a growing economy, are likely to have a negative effect on the value of the Units. The value of securities held by the Scheme generally will vary inversely with changes in prevailing interest rates. The fund could be exposed to the interest rate risk (i) to the extent of time gap in resetting of the benchmark rates, and (ii) to the extent the benchmark index fails to capture the interest rate movement.

Prepayments and Charge Offs Risk: In the event of prepayments, investors may be exposed to changes in tenor and yield. Also, any Charge Offs would result in the reduction in the tenor of the Pass Through Certificates (PTCs).

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. However depending upon the market conditions the spreads may move adversely or favorably leading to fluctuation in NAV.

Risks associated with Investing in Foreign Securities

Subject to necessary approvals and within the investment objectives, the Scheme may invest in overseas markets which carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, repatriation of capital due to exchange controls and political circumstances.

It is the AMC's belief that investment in foreign securities offers new investment and portfolio diversification opportunities into multimarket and multi-currency products. However, such investments also entail additional risks. Such investment opportunities may be pursued by the AMC provided they are considered appropriate in terms of the overall investment objectives of the Scheme. Since the Scheme would invest only partially in foreign securities, there may not be readily available and widely accepted benchmarks to measure performance of the Scheme. To manage risks associated with foreign currency and interest rate exposure, the Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated under the Regulations or by RBI from time to time. The Scheme may invest in ADR/GDR/Foreign Securities and / or other securities as may be permissible and described in SEBI Circular Reference No. SEBI/IMD/CIR NO. 7/104753/07 dated September 26, 2007, SEBI Circular Reference No. SEBI/HO/IMD/DF3/CIR/P/2020/225 dated November 05, 2020 and SEBI/HO/IMD/IMD-II/DOF3/P/CIR/2021/571 dated June 03, 2021 as may be amended from time to time, within the overall applicable limits and within the scheme specific asset allocation pattern.

As per the extant SEBI (MF) Regulation, the Fund is permitted to invest USD 1 billion. However, the overall limit for the Mutual Fund Industry is USD 7 billion. The Scheme therefore may or may not be able to utilise the limit of USD 1 billion due to the USD 7 billion limit being exhausted by other Mutual Funds. Further, the overall ceiling for investment in overseas Exchange Traded Funds (ETFs) that invests in securities is USD 1 billion subject to a maximum of USD 300 million per mutual fund. As and when the investment limits are breached, the subscriptions into the Scheme shall be suspended till further notice by the AMC.

Ongoing period: During the ongoing period the scheme shall have an investment headroom of 20% of the average AUM of schemes of Sundaram Mutual Fund in Overseas securities / Overseas ETFs of the previous three calendar months shall be available for that month to invest in Overseas securities / Overseas ETFs subject to maximum limits of USD 1 billion. As and when the investment limits are breached, the subscriptions into the Scheme shall be suspended till further notice by the AMC.

The above limits are subject to change from time to time based on changes in the regulatory requirements

Overseas investments will be made subject to any/all approvals, conditions thereof as may be stipulated under the Regulations or by RBI and provided such investments are consistent with costs and expenses attendant to international investing and do not result in expenses to the Scheme in excess of the ceiling on expenses prescribed under Regulations. The Fund may, where necessary, may appoint other intermediaries of repute as advisors, custodian/sub custodians etc. for managing and administering such investments. The appointment of such intermediaries shall be in accordance with the applicable requirements of SEBI and within the permissible ceilings

of expenses. The fees and expenses would illustratively include, besides the investment management fees, custody fees and costs, fees of appointed advisors and sub-managers, transaction costs and overseas regulatory costs.

To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of said foreign currencies relative to the Indian Rupee. The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment.

Risks associated with Investing in Derivatives

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. The AMC may use various derivative products, as permitted by SEBI and the RBI from time to time, in an attempt to optimize the value of the portfolio and enhance Unit holder's interest/value of the Scheme. As and when the Scheme trades in the derivatives market, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. The Scheme bears a risk that it may not be able to correctly forecast future market trends or the value of assets, indices or other financial or economic factors in establishing derivative positions for the Scheme. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate in line with underlying assets, rates and indices.

Also, the market for derivative instruments is relatively nascent in India and does not have the volumes which may be seen in other developed markets, which may result in volatility to the values. Derivatives require the maintenance of adequate controls to monitor the transactions and the embedded market risks that a derivative adds to the portfolio. Besides the price of the underlying asset, the volatility, tenor and interest rates affect the pricing of derivatives.

Other risks in using derivatives include but are not limited to:

(a) **Credit Risk** – this occurs when a counterparty defaults on a transaction before settlement and therefore, the Scheme(s) is compelled to negotiate with another counter party, at the then prevailing (possibly unfavorable) market price, in order to maintain the validity of the hedge. For exchange traded derivatives, the risk is mitigated as the exchange provides a guaranteed settlement but one takes the performance risk on the exchange.

(b) **Market Liquidity risk** – this occurs where the derivatives cannot be sold (unwound) at prices that reflect the underlying assets, rates and indices.

(c) **Model Risk** - this is risk of mis-pricing or improper valuation of derivatives.

d) **Basis Risk** – This risk arises when the instrument used as a hedge does not match the movement in the instrument/ underlying asset being hedged. The risks may be inter-related also; for e.g. interest rate movements can affect equity prices, which could influence specific issuer/industry assets.

Trading in derivatives carry a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount. The Scheme may find it difficult or impossible to execute derivative transactions in certain circumstances. For example,

when there are insufficient bids or suspension of trading due to price limit or circuit breakers, the Scheme may face a liquidity issue.

Interest Rate Swaps (IRS) are highly specialized instruments that require investment technique and risk analysis different from those associated with equity shares and other traditional securities. The use of a IRS requires not only an understanding of the referenced asset, reference rate, or index but also of the swap itself, without the benefit of observing the performance of the swap under all possible market conditions. Swap agreements are also subject to liquidity risk, which exists when a particular swap is difficult to purchase or sell. Swap agreements may be subject to pricing risk, which exists when a particular swap becomes extraordinarily expensive (or cheap) relative to historical prices or the prices of corresponding cash market instruments. IRS agreements are also subject to counterparty risk on account of insolvency or bankruptcy or failure of the counterparty to make required payments or otherwise comply with the terms of the agreement.

Risks associated with investing in Securitised Debt

The Scheme may invest in domestic securitised debt such as Asset Backed Securities (ABS) or Mortgage Backed Securities (MBS). Asset Backed Securities (ABS) are securitised debts where the underlying assets are receivables arising from various loans including automobile loans, personal loans, loans against consumer durables, etc. Mortgage Backed Securities (MBS) are securitised debts where the underlying assets are receivables arising from loans backed by mortgage of residential / commercial properties. ABS/ MBS instruments reflect the undivided interest in the underlying pool of assets and do not represent the obligation of the issuer of ABS/MBS or the originator of the underlying receivables. The ABS/MBS holders have a limited recourse to the extent of credit enhancement provided. If the delinquencies and credit losses in the underlying pool exceed the credit enhancement provided, ABS/MBS holders will suffer credit losses. ABS/MBS are also normally exposed to a higher level of reinvestment risk as compared to the normal corporate or sovereign debt.

At present in Indian market, following types of loans are securitised:

- Auto Loans (cars / commercial vehicles / two wheelers)
- Residential Mortgages or Housing Loans
- Consumer Durable Loans
- Personal Loans
- Corporate Loans

The main risks pertaining to each of the asset classes above are described below:

Auto Loans (cars / commercial vehicles /two wheelers)

The underlying assets (cars, commercial vehicles, two wheelers etc.) are susceptible to depreciation in value whereas the loans are given at high loan to value ratios. Thus, after a few months, the value of asset becomes lower than the loan outstanding. The borrowers, therefore, may sometimes tend to default on loans and allow the vehicle to be repossessed. These loans are also subject to model risk. i.e. if a particular automobile model does not become popular, loans given for financing that model have a much higher likelihood of turning bad. In such cases, loss on sale of repossession vehicles is higher than usual. Commercial vehicle loans are susceptible to the cyclical in the economy. In a downturn in economy, freight rates drop leading to higher defaults in commercial vehicle loans. Further, the second hand prices of these vehicles also decline in such economic environment.

Housing Loans

Housing loans in India have shown very low default rates historically. However, in recent years, loans have been given at high loan to value ratios and to a much younger borrower classes. The loans have not yet gone through the full economic cycle and have not yet seen a period of declining property prices. Thus the performance of these housing loans is yet to be tested and it need not conform to the historical experience of low default rates.

Consumer Durable Loans

The underlying security for such loans is easily transferable without the bank's knowledge and hence repossession is difficult. The underlying security for such loans is also susceptible to quick depreciation in value. This gives the borrowers a high incentive to default.

Personal Loans

These are unsecured loans. In case of a default, the bank has no security to fall back on. The lender has no control over how the borrower has used the borrowed money.

Corporate Loans

These are loans given to single or multiple corporates. The receivables from a pool of loans to corporates are assigned to a trust that issues Pass through certificates in turn. The credit risk in such PTCs is on the underlying pool of loans to corporates. The credit risk of the underlying loans to the corporates would in turn depend of economic cycles.

Further, all the above categories of loans have the following common risks:

All the above loans are retail, relatively small value loans. There is a possibility that the borrower takes different loans using the same income proof and thus the income is not sufficient to meet the debt service obligations of all these loans. In India, there is no ready database available regarding past credit record of borrowers. Thus, loans may be given to borrowers with poor credit record. In retail loans, the risks due to frauds are high.

Risks associated with Securities Lending

• Securities Lending :

It may be noted that Securities Lending activity would have the inherent probability of collateral value drastically falling in times of strong downward market trends or due to it being comprised of tainted/forged securities, resulting in inadequate value of collateral until such time as that diminution in value is replenished by additional security. It is also possible that the borrowing party and /or the approved intermediary may suddenly suffer severe business setback and become unable to honor its commitments. This along with a simultaneous fall in value of collateral would render potential loss to the Scheme(s). Besides, there can also be temporary illiquidity of the securities that are lent out and the Scheme(s) may not be able to sell such lent out securities.

Risks associated with investing in Tri-Party Repo through CCIL (TREPS)

Tri-party Repo i.e. TREPS facilitates, borrowing and lending of funds, in Triparty Repo arrangement. CCIL would be the Central Counterparty to all trades from Tri Party Repo Dealing System (TREPS) and would also perform the role and responsibilities of Triparty Repo Agent, in terms of Repurchase Transactions (Repo) (Reserve Bank) Directions, 2018 as amended from time to time. The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All TREPS trades are settled anonymously and centrally through the infrastructure and settlement systems provided by CCIL. Further the settlement is guaranteed by CCIL. This is a collateralized investment whereby borrowers have to give adequate amount of securities on which a haircut is applied by CCIL. CCIL periodically prescribes a list of securities eligible for contributions as collateral by members. Presently, all Central Government securities and Treasury bills are accepted as collateral by CCIL. The risk factors may undergo change in case the CCIL notifies securities other than Government of India securities as eligible for contribution as collateral.”

CCIL has several risk management processes in place such as initial margin, borrowing limits, identification of eligible collateral, haircuts on eligible collateral, mark to market margins (MTM) and volatility margin are applicable for Triparty Repo trades. There is a default fund for Triparty Repo trades. The exposure monitoring is online and on a pre-order basis, ensuring that orders can be placed only if the member has sufficient initial margin and/or borrowing limits to support the resultant trades. CCIL may temporarily impose volatility margin in case of a sudden increase in volatility in interest rates. Thus, the settlement and counterparty risks are considerably low.

In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to handle any shortfall arising out of such default and to complete the settlement. The sequence in which the above resources are used is known as the “Default Waterfall”. As per the waterfall mechanism, after the defaulter’s margins and the defaulter’s contribution to the default fund have been appropriated, CCIL’s contribution is used to meet the losses. Post utilization of CCIL’s contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

RISK CONTROL

I. Risk mitigation factors for investments associated with equities:

1. Focused risk management with an endeavour to ensure adequate safeguards for controlling risks during portfolio construction.
2. Reducing risks through portfolio diversification, taking care however not to dilute returns of the scheme.
3. Use derivatives and hedging products as permitted as RBI/SEBI to protect the value of portfolio.
4. Implement exposure limits which may be varied from time to time, restricting the exposure to any industry (as defined in AMFI industry classification) as a percentage of the portfolio at any point of time.
5. Portfolio shall be maintained in such a manner so as to provide necessary liquidity (after considering inflows and redemptions).
6. Due diligence of a company so as to minimize stock specific risks.

II. Risk mitigation factors for investments associated with Debt and/or Money Market Instruments:

1. Rigorous in-depth credit evaluation of the securities proposed to be invested focusing on analysis of fundamentals of the company, company's financials and the quality of management.
2. Use derivatives and hedging products to protect the value of portfolio.
3. To invest over a range of companies, groups as well as industries in accordance with SEBI Regulations with an endeavour to reduce risk using diversification.
4. Having appropriate portfolio turnover to meet cash flow requirements, adjustments relating to average maturity of the assets held, change or an anticipated change in the credit worthiness of the investee companies.
5. Control credit risk by investing in rated papers of the companies having strong fundamentals, sound financial strength and superior quality of management.
6. Reduce Liquidity Risk by investing in TREPS and other such similar short term highly liquid instruments.

Risk factors specific to the Scheme

Sundaram Tax Savings Fund

Prices of equity securities rise and fall in response to a number of factors including events that impact entire financial markets or industries (for example, changes in inflation or consumer demand) as well as events impacting a particular issuer (for example, news about the success or failure of a new product). The Securities purchased by the Scheme present greater opportunities for growth because of high potential earnings growth, but may also involve greater risks than securities that do not have the same potential. The Scheme may invest in companies with limited product lines, markets or financial resources. As a result, these securities may change in value more than those of larger, more established companies. As the value of the securities owned by the Scheme changes, the Scheme unit price changes. In the short-term, the price can fluctuate dramatically. As with all Mutual Funds, as the value of the scheme's assets rise and fall, the Scheme unit price changes. If the units are redeemed when their value is less than the price paid for, money may be lost by the unitholder.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. The two conditions mentioned above shall be complied in each calendar quarter, on an average basis, as specified by SEBI. In case the Scheme does not have a minimum of 20 investors, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at

applicable NAV. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days' notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. SPECIAL CONSIDERATIONS

Investment in the Scheme should be viewed by an investor/unit holder as a medium to long term investment as mutual funds carry normal market risks and there can be no assurance and no guarantee that the Scheme will achieve its objective. It is recommended that an investment in the Scheme should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all, as investment decisions made by the AMC will not always be profitable or prove to be correct. As with any investment in stocks, shares and securities, the NAV of the Units under the Scheme can go up or down, depending on the factors and forces affecting the capital markets. Past performance of the schemes of Sundaram Mutual Fund, the Sponsor or its Group affiliates is not indicative of and does not guarantee the future performance of the scheme. The name of the Scheme does not in any manner indicate the quality of the Scheme, its future prospects or the returns. The Scheme is not intended as a complete investment program. Investors, therefore, are urged to study the terms of this offer carefully and consult their Investment Advisor before they invest in the Scheme. Investors'/unit holders' attention is drawn to the risk factors set out in the beginning of this Scheme Information Document and also to the following specific risks:

Regulatory Risks: Neither this SID nor the Units have been registered in any jurisdiction. The distribution of this SID in certain jurisdictions may be restricted or subject to registration requirements and, accordingly, persons who come into possession of this SID are required to inform themselves about, and to observe, any such restrictions. No person receiving a copy of this SID or any accompanying application form in such jurisdiction may treat this SID or such application form as constituting an invitation to them to subscribe for Units, nor should they in any event use any such application form, unless in the relevant jurisdiction such an invitation could lawfully be made to them and such application form could lawfully be used without compliance with any registration or other legal requirements. Accordingly, this SID does not constitute an offer or solicitation by anyone in any jurisdiction in which such offer or solicitation is not lawful or in which the person making such offer or solicitation is not qualified to do so or to anyone to whom it is unlawful to make such offer or solicitation. It is the responsibility of any persons in possession of this SID and any persons wishing to apply for Units pursuant to this SID to inform themselves of and to observe, all applicable laws and Regulations of such relevant jurisdiction.

Prospective investors should review/study this SID along with SAI carefully and in its entirety and shall not construe the contents hereof or regard the summaries contained herein as advice relating to legal, taxation, or financial/investment matters and are advised to consult their own professional advisor(s) as to the legal or any other requirements or restrictions relating to the subscription, gifting, acquisition, holding, disposal (sale, transfer, switch or redemption or conversion into money) of Units and to the treatment of income (if any), capitalization, capital gains, any distribution, and other tax consequences relevant to their subscription, acquisition, holding, capitalization, disposal (sale, transfer, switch or redemption or conversion into money) of Units within their jurisdiction/of nationality, residence, domicile etc. or under the laws of any jurisdiction to which they or any managed Funds to be used to purchase/gift Units are subject, and (also) to determine possible legal, tax, financial or other consequences of subscribing/gifting to, purchasing or holding Units before making an application for Units.

No person has been authorized to give any information or to make any representations not confirmed in this SID in connection with the Offer of Units, and any information or representations not contained herein must not be relied upon as having been authorized by the Mutual Fund or the AMC or the Trustee. Statements made in this SID are based on the law and practice currently in force in India and are subject to change therein. Neither the delivery of this SID nor any sale made hereunder shall, under any circumstances, create any impression that the information herein is correct as of any time subsequent to the date hereof.

Performance Risk: The value of (and income from) an investment in the Scheme can decrease as well as increase, depending on a variety of factors, which may affect the values and income generated by a Scheme's portfolio of securities. The returns of a Scheme investments are based on the current yields of the securities,

which may be affected generally by factors affecting capital markets such as price and volume, volatility in the stock markets, interest rates, currency exchange rates, changes in government and Reserve Bank of India policy, taxation, political, economic or other developments and closure of the stock exchanges. Investors should understand that the investment composition indicated for the Scheme, in line with prevailing market conditions, is only a hypothetical example as all investments involve risk and there can be no assurance that the Scheme's investment objective will be attained nor will the Scheme be in a position to maintain the model percentage of investment pattern/composition particularly under exceptional circumstances such that the interest of the unit holders are protected.

The AMC will endeavor to invest in highly researched growth companies, however the growth associated with equities is generally high as also the erosion in the value of the investments/portfolio in the case of the capital markets passing through a bearish phase is a distinct possibility. Changes in the prevailing rates of interest are likely to affect the value of the Scheme investments and thus the value of the Scheme's Units. The value of money market/debt instruments held by the Scheme generally will vary inversely with the changes in prevailing interest rates. The AMC, while investing in fixed income instruments like debt, etc., shall consider and evaluate the risk of an issuer's ability to meet principal and interest payments (credit risk) and also the price volatility due to such factors as interest sensitivity, market perception or the creditworthiness of the issuer and general market liquidity (market risk). While it is the intent of the AMC to invest primarily in more highly rated debt securities and highly researched growth companies, the Scheme may from time to time invest in high yielding/growth, lower rated and/or privately placed/unlisted/securitised securities. Lower rated or unrated securities are more likely to react to developments affecting market and credit risk than highly rated securities. The credit risk factors pertaining to lower rated securities also apply to lower rated zero coupon, deferred interest bonds.

Techniques Risk: The Scheme may use techniques (including derivatives, futures and options, warrants, etc.) and instruments that may be permitted and/or that may become permissible under SEBI/RBI Regulations and/or Regulations and/or statutory modification or re-enactment thereof for efficient portfolio management and to attempt to hedge or reduce the risk of such fluctuation. However, these techniques and instruments, if imperfectly used have the risk of the scheme incurring losses due to mismatches particularly in a volatile market. The Fund's ability to use these techniques may be limited by market conditions, regulatory limits and tax considerations (if any). The use of these techniques is dependent on the ability to predict movements in the prices of securities being hedged and movements in interest rates. There exists an imperfect correlation between the hedging instruments and the securities or market sectors being hedged. Besides, the fact that skills needed to use these instruments are different from those needed to select the Fund's/Scheme's securities. There is a possible absence of a liquid market for any particular instrument at any particular time even though the futures and options may be bought and sold on an organized stock exchange. The use of these techniques involves possible impediments to effective portfolio management or the ability to meet repurchase/redemption requests or other short-term obligations because of the percentage of the Scheme's assets segregated to cover its obligations.

Political Risk: Whereas the Indian market was formerly restrictive, a process of deregulation has been taking place over recent years. This process has involved the removal of trade barriers and other protectionist measures, which could adversely affect the value of investments. It is possible that future changes in the Indian political situation, including political, social, or economic instability, diplomatic developments and changes in laws or regulations could have an effect on the value of investments. Expropriation, confiscatory taxation, or other relevant developments could also affect the value of investments.

Forex Risk: The scheme may also invest in overseas financial assets in accordance with the guidelines issued by the concerned regulatory authorities in India. To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distribution and income may be adversely affected by changes in the value of respective foreign currencies relative to the Indian rupee. The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it or other restrictions on investment. In addition, country risks would include events such as introduction of extraordinary exchange controls, economic deterioration and bi-lateral conflict leading to immobilisation of the overseas financial assets.

Liquidity and Settlement Risks: The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods. From time to time, the Scheme will invest in certain securities of certain companies, industries, sectors etc. based on certain investment parameters as adopted internally by AMC. While at all times the Trustees and the AMC will endeavor that excessive holding/investment in certain securities of industries, sectors, etc. by the Scheme be avoided, the assets invested by the Scheme in

certain securities of industries, sectors, etc. may acquire a substantial portion of the Scheme's investment portfolio and collectively may constitute a risk associated with non-diversification and thus could affect the value of investments. The Scheme may have difficulty in disposing of certain securities because the security may be unlisted, due to greater price fluctuations there may be a thin trading market, different settlement periods and transfer procedures for a particular security at any given time. Settlement, if accomplished through physical delivery of stock certificates, is labour and paper intensive and may affect the liquidity. It should be noted that the Fund bears the risk of purchasing fraudulent or tainted papers. The secondary market for money market/debt securities does exist, but is generally not as liquid as the secondary market for other securities. Reduced liquidity in the secondary market may have an adverse impact on market price and the Scheme's ability to dispose of particular securities, when necessary, to meet the Scheme's liquidity needs or in response to a specific economic event, such as the deterioration in the creditworthiness of the issuer, etc. or during restructuring of the Scheme investment portfolio. Furthermore, from time to time, the AMC, the Custodian, the Registrar, any Associate, any distributor, dealer, any company, corporate body, trust, any scheme/Mutual Fund managed by the AMC or by any other AMC may invest in the Scheme. While at all times the Trustees and the AMC will endeavor that excessive holding of Units in the Scheme among a few unit holders is avoided, however, the amounts invested by these aforesaid persons may acquire a substantial portion of the Scheme's outstanding Units and collectively may constitute a majority unit holder in the Scheme. Accordingly, redemption of Units held by such persons may have an adverse impact on the value of the redemption and may impact the ability of the unit holders to redeem their respective Units.

B. WHAT IS THE INVESTMENT OBJECTIVE OF THE SCHEME?

To build a high quality growth-oriented portfolio to provide long-term capital gains to the investors. The scheme aims at providing returns through capital appreciation.

C. HOW WILL THE SCHEME ALLOCATE ITS ASSETS?

Under normal circumstances, the asset allocation would be as follows:

Types of Instruments	Normal Allocation (% of Net Assets)	Risk Profile
Equity and Equity Linked Instruments	Not less than 80%	High
Debt securities (*including securitised debt) and Money market instruments	Upto 20%	Low to Medium

The Scheme may invest upto 50% of the net assets of the Scheme in derivatives.

* Investment in Securitised Debt may be up to 20% of the net assets of the Scheme.

The AMC further reserves the right to invest in foreign securities and derivatives subject to SEBI/RBI or any other Regulatory Authorities permitted from time to time.

Subject to the SEBI Regulations, the Mutual Fund may deploy upto 50% of its total net assets of the Scheme in Stock Lending.

The Scheme may also invest a part of its assets in financial derivatives such as options and futures that are permitted or may become permissible under SEBI/RBI Regulations. The proportion of assets to be so invested would be decided by the AMC at the appropriate time and would be done in accordance with the relevant guidelines to be issued by SEBI and other authorities. The Scheme may also invest a part of its assets in overseas markets in American Depository Receipts (ADRs), Global Depository Receipts (GDRs), overseas Equity, Bonds, Mutual Funds and the like instruments. Such investments would be made as and when approvals for the same are received from appropriate authorities and proportion of moneys to be so invested within the investment composition would also be decided by the AMC at the appropriate time.

There is no assurance that the objective of the Scheme may be achieved. Subject to SEBI Regulations, the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. Percentages stated above are only indicative and not absolute. These proportions may vary substantially depending upon the perception of the AMC, the intention being at all times to seek to protect the NAV of the Scheme and interests of the Unit holders. Such changes in the investment pattern will be for short term and only for defensive considerations.

The service charges payable to the Depository Participant will form a part of the annual recurring expenses.

E. WHAT ARE THE INVESTMENT STRATEGIES?

The scheme will invest its assets in a portfolio of equity and equity related instruments. The focus of the investment strategy would be to identify stocks which can provide capital appreciation in the long term. The aim will be to build a diversified portfolio across major industries and economic sectors by using “fundamental analysis” as its selection process.

The three basic steps of fundamental analysis are:

- 1) **Research** - consideration of economic prospects over the next one to two years rather than focusing on near term expectations. This approach is designed to provide insight into a company’s real growth potential.
- 2) **Valuation** - use of the research to allow the Investment Manager to identify segments of the market for investment. The Investment Manager would consider various factors including sustainable, superior earnings growth and above average or accelerating rates of growth.
- 3) **Securities selection** - The Investment Manager would buy and sell securities using its research and valuation as the basis. It attempts to identify the individual issuers that it considers to have high growth potential, that are market share leaders and/ or have high quality management with consistent track records and solid balance sheets.

Trading in Derivatives

The Scheme may take derivatives position based on the opportunities available subject to the guidelines provided by SEBI from time to time and in line with the overall investment objective of the Scheme. The Scheme shall not take leveraged positions and total investments, including investments in Debt and other securities and gross exposure to Derivatives, if any, shall not exceed net assets under management of the Scheme.

SEBI has vide its Circulars inter alia, DNPD/Cir-29/2005 dated September 14, 2005 and DNPD/Cir-30/2006 dated January 20, 2006 and CIR/IMD/DF/11/2010 dated August 18, 2010 specified the guidelines pertaining to trading by Mutual Fund in Exchange traded derivatives and SEBI Circular DNPD/Cir-31/2006 dated September 22, 2006 modifying the position limits for Index derivative contracts.

A derivative is an instrument whose value is derived from the value of one or more of the underlying assets which can be commodities, precious metals, bonds, currency, etc. Common examples of Derivative instruments are Interest Rate Swaps, Forward Rate Agreements, Futures, Options, etc.

In case of equity derivatives, the Scheme may transact in exchange traded equity derivatives only and these instruments may take the form of Index Futures, Index Options, Futures and Options on individual equities/securities and such other derivative instruments as may be appropriate and permitted under the SEBI Regulations and guidelines from time to time.

Derivative positions taken would be guided by the following principles:

Exposure to Equity Derivatives

The net derivatives position in the Scheme may be up to the limit as set forth in the asset allocation pattern of the Scheme, subject to the following regulatory limits:

i. Position limit for the Mutual Fund in index options contracts:

- a. The Mutual Fund position limit in all index options contracts on a particular underlying index shall be Rs500 crore or 15% of the total open interest in the market in index options, whichever is higher, per Stock Exchange.
- b. This limit would be applicable on open positions in all options contracts on a particular underlying index.

ii. Position limit for the Mutual Fund in index futures contracts:

- a. The Mutual Fund position limit in all index futures contracts on a particular underlying index shall be Rs500 crore or 15% of the total open interest in the market in index futures, whichever is higher, per Stock Exchange.
- b. This limit would be applicable on open positions in all futures contracts on a particular underlying index.

iii. Additional position limit for hedging:

In addition to the position limits at point (i) and (ii) above, Fund may take exposure in equity index derivatives subject to the following limits:

- a. Short positions in index derivatives (short futures and long puts) shall not exceed (in notional value) the Mutual Fund's holding of stocks.
- b. Long positions in index derivatives (long futures and long calls) shall not exceed (in notional value) the Mutual Fund's holding of cash, government securities, T-Bills and similar instruments.

iv. Position limit for the Mutual Fund for stock based derivative contracts:

The Mutual Fund position limit in a derivative contract on a particular underlying stock, i.e. stock option contracts and stock futures contracts:

- The combined futures and options position limit shall be 20% of the applicable Market Wide Position Limit (MWPL).

v. Position limit for the Scheme:

The position limits for the Scheme and disclosure requirements are as follows:

- a. For stock option and stock futures contracts, the gross open position across all derivative contracts on a particular underlying stock of a scheme of a Fund shall not exceed the higher of 1% of free float market capitalization (in terms of number of shares).

Or

5% of the open interest in the derivative contracts on a particular underlying stock (in terms of number of contracts).

- b. This position limit shall be applicable on the combined position in all derivative contracts on an underlying stock at a Stock Exchange.

c. For index based contracts, the Mutual Fund shall disclose the total open interest held by its scheme or all schemes put together in a particular underlying index, if such open interest equals to or exceeds 15% of the open interest of all derivative contracts on that underlying index.

As and when SEBI notifies amended limits in position limits for exchange traded derivative contracts in future, the aforesaid position limits, to the extent relevant, shall be read as if they were substituted with the SEBI amended limits.

The Scheme may purchase call and put options in securities in which it invests and on securities indices. Through the sale and purchase of futures contracts the Fund would seek to hedge against a decline in securities owned by the Fund or an increase in the prices of securities which the Fund plans to purchase. The Fund would sell futures contracts on securities indices in anticipation of a fall in stock prices, to offset a decline in the value of its equity portfolio. When this type of hedging is successful, the futures contract increase in value while the Fund's investment portfolio declines in value and thereby keep the Fund's net asset value from declining as much as it otherwise would. Similarly, when the Fund is not fully invested, and an increase in the price of equities is expected, the Fund would purchase futures contracts to gain rapid market exposure that may partially or entirely offset increase in the cost of the equity securities it intends to purchase. In certain cases the Fund might invest in futures contracts as against underlying cash stocks for reasons of liquidity and lower impact costs.

Stock and Index Futures

Hedging against an anticipated rise in equity prices:-

The scheme has a corpus of Rs.100 crores and has cash of Rs.15 crores available to invest. The Fund may buy index/stock futures of a value of Rs.15 crores. The scheme may reduce the exposure to the future contract by taking an offsetting position as investments are made in the equities; the scheme wants to invest in. Here, if the market rises, the scheme gains by having invested in the index futures.

Hedging against anticipated fall in equity prices:-

If the Fund has a negative view on the market and would not like to sell stocks as the market might be weak, the scheme of the Fund can go short on index/stock futures. Later, the scheme can unwind the future positions. A short position in the future would offset the long position in the underlying stocks and this can curtail potential loss in the portfolio. The Fund's successful use of futures contracts is subject to the Fund Manager's ability to predict correctly the market factor affecting the market value of the Fund's portfolio securities. For example if a Fund is hedged against a fall in the securities using a short position in index futures, and the market instead rises, the Fund loses part or all of the benefit of the increase in securities prices on account of the offset losses in index futures. Imperfect co-relation between the price movements in the securities index on the one hand and the stocks held by the Fund or the futures contracts itself on the other hand may result in trading losses. The Fund may not be able to close an open futures position due to insufficient liquidity in the futures market. Under such circumstances, the Fund would be required to make daily cash payments of variation margin in the event of adverse price movements. If the Fund has insufficient cash, the Fund may be required to sell portfolio securities to meet daily variation margin requirement at a time when it may be disadvantageous to do so.

A hedge is designed to offset a loss on a portfolio with a gain in the hedge position. At the same time, however, a properly correlated hedge will result in a gain in the portfolio position being offset by a loss in the hedge position. As a result the use of derivatives could limit any potential gain from an increase in value of the position hedged. In addition, an exposure to derivatives in excess of the hedging requirement can lead to losses.

Stock and Index Options:

Option contracts are of two types - Call and Put; the former being the right, but not obligation, to purchase a prescribed number of shares at a specified price before or on a specific expiration date and the latter being the right, but not obligation, to sell a prescribed number of shares at a specified price before or on a specific expiration date. The price at which the shares are contracted to be purchased or sold is called the strike price. Options that can be exercised on or before the expiration date are called American Options, while those that can be exercised only on the expiration date are called European Options. In India, all individual stock options are American Options, whereas all index options are European Options. Option contracts are designated by the type of option, name of the underlying, expiry month and the strike price.

Example for Options:

Buying a Call Option: Let us assume that the Fund buys a call option of XYZ Ltd. with strike price of Rs.1000/-, at a premium of Rs.25/-. If the market price of ABC Ltd on the expiration date is more than Rs.1000/-, the option will be exercised. The Fund will earn profits once the share price crosses Rs.1025/- (Strike Price + Premium i.e. 1000+25). Suppose the price of the stock is Rs.1100/-, the option will be exercised and the Fund will buy 1 share of XYZ Ltd. from the seller of the option at Rs.1000/- and sell it in the market at Rs.1100/-, making a profit of Rs.75/-. In another scenario, if on the expiration date the stock price falls below Rs.1000/-, say it touches Rs.900/-, the Fund will choose not to exercise the option. In this case the Fund loses the premium (Rs.25/-), which will be the profit earned by the seller of the call option.

Buying a Put Option. Let us assume the Fund owns the shares of XYZ Ltd, which is trading at Rs.500/-. The fund wishes to hedge this position in the short-term as it perceives some downside to the stock in the short-term. It can buy a Put Option at Rs.500/- by paying a premium of say Rs.10/- In case the stock goes down to Rs.450/- the fund has protected its downside to only the premium i.e Rs.10/- instead of Rs.50/-. On the contrary if the stock moves up to say Rs.550/- the fund may let the Option expire and forego the premium thereby capturing Rs.40/- upside. The strategy is useful for downside protection at cost of foregoing some upside.

For an option buyer, loss is limited to the premium that he has paid and gains are unlimited.

The above example is hypothetical in nature and all figures are assumed for the purpose of illustrating the use of call options in individual stocks. Similar analogy can be used for Index Options too when the fund wishes to hedge a part of the total portfolio or cash.

The following section describes some of the more common debt derivatives transactions along with their benefits:

Interest Rate Swap (IRS)

An IRS is an agreement between two parties to exchange stated interest obligations for an agreed period in respect of a notional principal amount. The most common form is a fixed to floating rate swap where one party receives a fixed (pre-determined) rate of interest while other receives a floating (variable) rate of interest.

Interest Rate Futures (IRF)

An interest rate futures contract is "an agreement to buy or sell a debt instrument at a specified future date at a price that is fixed today." Interest rate futures are derivative contracts which have a notional interest bearing security as the underlying instrument. The buyer of an interest rate futures contract agrees to take delivery of the underlying debt instruments when the contract expires and the seller of interest rate futures agrees to deliver the debt instrument.

The fund can effectively use interest rate futures to hedge from increase in interest rates.

Forward Rate Agreement (FRA)

A FRA is basically a forward starting IRS. It is an agreement between two parties to pay or receive the difference between an agreed fixed rate (the FRA rate) and the interest rate (reference rate) prevailing on a stipulated future date, based on a notional principal amount for an agreed period. The only cash flow is the difference between the FRA rate and the reference rate. As is the case with IRS, the notional amounts are not exchanged in FRAs.

Example

Let us assume that a scheme has an investment of Rs.10 crore in an instrument which pays interest linked to NSE Mibor. Since the NSE Mibor would vary daily, the scheme is running an interest rate risk on its investment and would stand to lose if rates go down. To hedge itself against this risk, the scheme could do an IRS where it receives a fixed rate (assume 10%) for the next 5 days on the notional amount of Rs.10 crore and pay a floating rate (NSE Mibor). In doing this, the scheme would effectively lock itself into a fixed rate of 10% for the next five days. The steps would be.

1. The scheme enters into an IRS on Rs.10 crore from May 1, 2013 to May 6, 2013. It receives a fixed rate of interest at 10% and the counter party receives the floating rate (NSE Mibor). The Scheme and the counter party exchange a contract of having entered into this IRS.
2. On a daily basis, the NSE Mibor will be tracked by the counterparties to determine the floating rate payable by the scheme.
3. On May 6, 2013, the counterparty will calculate the following;
 - The scheme will receive interest on Rs.10 crore at 10% p.a. for 5 days i.e. Rs.1,36,986/-
 - The scheme will pay the compounded NSE Mibor for 5 days
 - Effectively, the scheme has earned interest at 10% p.a. for 5 days by converting its floating rate asset into a fixed rate through the IRS.

If the total interest on the compounded NSE Mibor rate is lower than Rs.1,36,986/-, the scheme will receive the difference from the counterparty and vice-versa. In case the interest on compounded NSE Mibor is higher, the scheme would make a lower return than what it would have made had it not undertaken IRS.

Further, SEBI vide its Circular No. Cir/IMD/DF/11/2010 dated August 18, 2010, has prescribed the following in respect of investments in derivatives:

- 1) The cumulative gross exposure through equity, debt and derivative positions shall not exceed 100% of the net assets of the Scheme.
- 2) The Scheme shall not write options or purchase instruments with embedded written options.
- 3) The total exposure related to option premium paid must not exceed 20% of the net assets of the Scheme.
- 4) Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
- 5) Exposure due to hedging positions may not be included in the above mentioned limits, subject the following:
 - (a) Hedging positions are the derivative positions that reduce possible losses on existing positions in securities and till the existing position remains.
 - (b) Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point 1.
 - (c) Any derivative instrument used to hedge has the same underlying security as the existing positions being hedged.
 - (d) The quantity of underlying associated with the derivative positions taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
- 6) The Scheme may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.
- 7) Exposure due to derivative positions taken for hedging purposes in excess of the underlying positions against which the hedging position has been taken, shall be treated under the limits mentioned in Point 1.
- 8) Position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows: -

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option premium Paid * Lot Size* Number of Contracts

Portfolio Turnover Rate

The Portfolio Turnover Rate (PTR) means the lower of aggregate sales or purchases made during a particular year/period divided by the Average Asset under Management (average of Assets under Management on last day of month) for the relevant year/period.

"Portfolio Turnover" is the term used by any Mutual Fund for measuring the amount of trading that occurs in a Scheme's portfolio during the year. The Scheme is an open-ended scheme. It is expected that there may be a number of subscriptions and repurchases (after completion lock in period) on a daily basis. Moreover, portfolio

turnover in the Schemes will be a function of market opportunities. The economic environment changes on a continuous basis and exposes portfolio to systematic as well as non-systematic risk. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. However, a high turnover would significantly affect the brokerage and transaction costs. This will exclude the turnover caused on account of:

- Investing in the initial subscription,
- Subscriptions and redemptions undertaken by the unit holders.

The AMC will endeavor to balance the increased cost on account of higher portfolio turnover with the benefits derived therefrom. A high portfolio turnover rate is not necessarily a drag on portfolio performance and may be representative of arbitrage opportunities that exist for scrips/securities held in the portfolio rather than an indication of a change in AMC's view on a scrip, etc.

Portfolio Turnover Ratio of the Scheme as on September 30, 2021: 0.60

For the above clause, listed debt instruments shall include listed and to be listed debt instruments. Investments in CPs will be made only in CPs which are listed or to be listed

The Scheme shall not invest more than 5% of its NAV in unrated debt instruments. Investments will only be made in such instruments, including bills re-discounting, usance bills, etc., that are generally not rated and for which separate investment norms or limits are not provided in SEBI (Mutual Fund) Regulations, 1996 and various circulars issued thereunder. Investments in unrated debt instruments shall be subject to norms and guidelines as specified by SEBI from time to time. All such investments shall be made with the prior approval of the Board of Trustees and the Board of AMC.

Further the investments by the Scheme shall be in compliance with SEBI circular no. SEBI/HO/IMD/DF2/CIR/P/2019/104 dated October 1, 2019 and as amended by SEBI from time to time.

These investment limitations/parameters (as expressed/linked to the net asset/NAV/capital) shall in the ordinary course apply as of the date of the most recent transaction or commitment to invest, and changes do not have to be effected merely because, owing to appreciation or depreciation in value, or by reason of the receipt of any rights, bonuses or benefits in the nature of capital, or of any scheme of arrangement, or for amalgamation, reconstruction or exchange, or at any repayment or repurchase or other reason outside the control of the Fund, any such limits would thereby be breached. If these limits are exceeded for reasons beyond its control, the AMC shall adopt as a priority objective the remedying of that situation, taking due account of the interests of the unit holders.

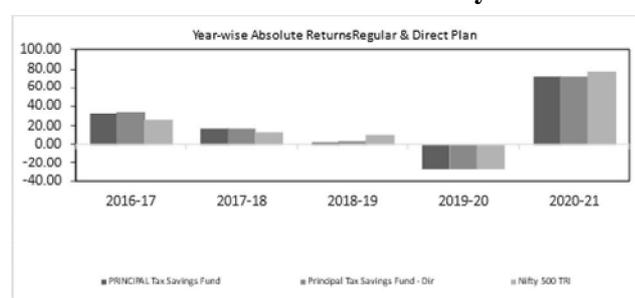

In addition, certain investment parameters (like limits on exposure to sectors, industries, issuers, etc.) may be adopted internally by the AMC, as amended from time to time, to ensure appropriate diversification/security for the Fund. The AMC may alter these above stated limitations from time to time, and also to the extent the SEBI Regulations change, so as to permit the Fund to make its investments in the full spectrum of permitted investments for Mutual Funds to achieve its investment objective. As such all investments of the Fund will be made in accordance with SEBI Regulations including Schedule VII thereof.

May 1	10.65	3000	281.69
June 1	10.05	3000	298.50
July 1	9.75	3000	307.69
August 1	9.60	3000	312.50
September 1	9.50	3000	315.79
October 1	9.25	3000	324.32
November 1	9.05	3000	331.49
December 1	8.90	3000	337.08

February 1	8.50	3000	352.94
March 1	8.80	3000	340.91
TOTAL		36000	3831.48

Note: The figures of NAV are hypothetical and are for illustrative purposes only.

At the end of one year the unitholder would have 3831.48 units, at an average per unit cost of Rs. 9.40.

Rupee Cost Averaging does not guarantee a profit nor protect against a loss. Rupee Cost Averaging can smooth out the market's ups and downs and reduce the risk of investing in volatile markets.

Redemption

Repurchase Procedure

After the expiry of lock-in period, the units of the Scheme can be repurchased (sold back to the Fund) on any business day. The repurchase request can be made on Application Form/Common Transaction form or by using the relevant tear off section of the Transaction Slip that may be enclosed with the Account Statement, which should be submitted at any of the Official Point of Acceptance. Where the date of redemption is a non- business day, the deemed date for such redemption will be the next business day.

In case the units are standing in the names of more than one unit holder, where mode of holding is specified as “jointly”, repurchase requests will have to be signed by all the joint holders. However, in cases of holding specified as ‘either/anyone or survivor’, any one of the joint holders (in case of either/anyone or survivor) will have the power to make repurchase request. However, in all cases, the repurchase proceeds will be paid to the sole/first named holder only.

In case a unit holder has subscribed to units on more than one Business Day, the units subscribed to prior in time (that is those units which have been held for the longest period of time), will be deemed to have been repurchased first, that is on a First -In -First-Out basis. However, a unit holder may request the Fund to repurchase units subscribed by him/her at different dates, by indicating the specific date of subscription of the units, which is offered for repurchase.

The repurchase request can be made by specifying the Rupee amount or by specifying the number of units to be repurchased. If a repurchase request is for both a specified Rupee amount and a specified number of units, the specified rupee amount will be considered the definitive request. If only the repurchase amount is specified by the unit holder, the AMC will divide the repurchase amount so specified by the applicable NAV based price to arrive at the number of units. The request for repurchase of units could also be in fractions, up to three decimal places.

If the number of Units held by the Investor as per the records maintained by AMC and/or the Registrar is less than the number of Units requested to be redeemed then, all the Units held by the Unit holder in such folio / Scheme / plan for which application for Redemption is made, shall be redeemed. Provided that, where redeem ‘all’ is specified in the request, all Unit holdings in that Scheme shall be redeemed.

The AMC reserves the right to change the minimum repurchase amount on a prospective basis subject to SEBI Regulations. Unit holders may also request for repurchase of their entire holding and close the account by indicating the same at the appropriate place in the Transaction Slip/Repurchase form.

In case if the date of redemption is a non business day, the deemed date will be the next business day.

Repurchase Price

The repurchase price will be calculated using the following formula:

Repurchase Price = Applicable NAV*(1 – Exit Load, if any).

Example for calculation of Repurchase Price

If the Applicable NAV is Rs.11.25 and a 1.00% exit load is charged the repurchase price will be calculated as follows:

Repurchase Price = Rs11.25 x (1-1.00% of Rs11.25)

= Rs11.25 - Rs0.1125

= Rs11.1375 per unit

The repurchase price shall not be lower than 93% of the NAV.

The AMC reserves the right to modify the exit load or levy a different exit load for any individual(s) or group of investors. However, any such change in the load structure shall be only on a prospective basis. The unit holder is requested to confirm the applicable exit load at the time of investment from the AMC/OPT.

Payment of Repurchase Proceeds

The time limit set for dispatch of repurchase proceeds will be from the Business Day when the request is accepted at the Official Point of Acceptance. As per the SEBI Regulations, the Fund shall mail the repurchase proceeds within ten Business Days from the date of acceptance of valid request at any of the Official Point of Acceptance, in case of a repurchase request being sent by post.

In the event of failure to dispatch the repurchase or repurchase proceeds within the statutory period specified above as per the SEBI Regulations, the AMC shall be liable to pay interest to the unit holders at such rate (currently 15% per annum) as may be specified by SEBI for the period of such delay.

The payment of redemption proceeds and/or Income Distribution amount may also be released through NEFT / RTGS facility in addition to other options available for releasing the payment

Electronic Credit Clearing Services (ECS) Identified Banks

ECS is a facility offered by RBI for facilitating better customer service by direct credit of dividend or repurchase amount to a unit holder's bank account through electronic credit. This helps in avoiding loss of dividend or repurchases warrant in transit or fraudulent encashment. The Fund will endeavour to arrange such facility for payment of dividend/repurchase proceeds to the unit holders. However, this facility is optional for the unit holders. Repurchase proceeds may be released through the ECS facility to unit holders residing in any of the cities where such a facility is available. In order to avail the above facility, the unit holder will have to give a written request to the Registrar. If the unit holder has opted for the ECS facility his/her bank branch will directly credit the amount due to them in their account whenever the payment is through ECS. The Registrar will send a separate advice to the unit holder informing them of the direct credit. It may be noted that there is no commitment from the Fund that this facility will be made available to the unit holders for payment of dividend/repurchase proceeds. While the Fund will endeavour in arranging the facility it will be dependent on various factors including sufficient demand for the facility from unit holders at any centre, as required by the authorities. In places where such a facility is not available or if the facility is discontinued by the Fund for any reason the repurchase warrants will be mailed to the unit holder.

Unit holder's Bank Account Details

Unit holders are on a mandatory basis are required to mention their bank account details in their applications/ requests for redemption. Redemption Cheques and/or any other instruments will then be made out in favour of the “Investor Name, Bank Name, Account Number, << >>” for crediting the respective Unitholder’s account so specified.

In case of those investors who have not provided their bank account details at the time of investment or thereafter, the redemption applications are liable to be rejected. The AMC will not be responsible for any loss arising out of fraudulent encashment of cheques and delay/loss in transit.
